Answer: B,C

NEW QUESTION # 231

The previous system administrator at your company used to rely heavily on email lists, such as vendor lists and Bug Traq to get information about updates and patches. While a useful means of acquiring data, this requires time and effort to read through. In an effort to speed things up, you decide to switch to completely automated updates and patching. You set up your systems to automatically patch your production servers using a cron job and a scripted apt-get upgrade command. Of the following reasons, which explains why you may want to avoid this plan?

- A. Relying on vendor and 3rd party email lists enables updates via email, for even faster patching
- B. The apt-get upgrade command doesn't work with the cron command because of incompatibility
- C. The command apt-get upgrade is incorrect, you need to run the apt-get update command
- D. Automated patching of production servers without prior testing may result in unexpected behavior or failures

Answer: C

NEW QUESTION # 232

Which of the following statements regarding the Secure Sockets Layer (SSL) security model are true? Each correct answer represents a complete solution. Choose two.

- A. The server can optionally authenticate the client.
- B. The client always authenticates the server.
- C. The client can optionally authenticate the server.
- D. The server always authenticates the client.

Answer: A,B

NEW QUESTION # 233

.....
