The H12-821_V1.0 certification is the best proof of your ability. However, it's not easy for those work officers who have less free time to prepare such an H12-821_V1.0 exam, and people always feel fear of the unknown thing and cannot handle themselves with a sudden change. However, our H12-821_V1.0 Exam Questions can stand by your side. And we are determined to devote ourselves to serving you with the superior H12-821_V1.0 study materials. You can have a try on the free demo of our H12-821_V1.0 exam questions, you can understand in detail and make a choice.

Huawei H12-821_V1.0 Exam covers a wide range of topics related to data communication technologies such as network architecture, network protocols, routing protocols, network security, and network management. H12-821_V1.0 exam is designed to test the candidate's knowledge and skills in these areas and assess their ability to implement and troubleshoot data communication technologies in a real-world environment. H12-821_V1.0 Exam consists of multiple-choice questions that are based on practical scenarios, which makes it a highly practical and relevant certification for IT professionals.

Quiz 2025 Latest Huawei Valid H12-821_V1.0 Test Review

We provide first-rate service on the H12-821_V1.0 learning prep to the clients and they include the service before and after the sale, 24-hours online customer service and long-distance assistance, the refund service and the update service. The client can try out our and download H12-821_V1.0 Guide materials freely before the sale and if the client have problems about our H12-821_V1.0 study braindumps after the sale they can contact our customer service at any time.

One of the key benefits of obtaining the Huawei H12-821_V1.0 Certification is that it demonstrates to employers and clients that the candidate has a deep understanding of data communication technologies and is capable of delivering high-quality network solutions. Additionally, the certification provides a competitive advantage in the job market and can lead to career advancement opportunities.

Huawei HCIP-Datacom-Core Technology V1.0 Sample Questions (Q985-Q990):

NEW QUESTION # 985

Which of the following descriptions about the P/A mechanism in RSTP are correct? (Multiple choice)

- A. In RSTP, the main purpose of the P/A mechanism is to speed up the speed at which the downstream port enters the Forwarding state
- B. In RSTP, the main purpose of the P/A mechanism is to speed up the speed at which the upstream port enters the

Forwarding state.

- C. In RSTP, when the switch receives the RST BPDU with the Agreement bit set from the opposite end, it will immediately put the designated port into the Forwarding state
- D. In RSTP, all switches will send RST BPDU with the Proposal bit set in the initial state

Answer: B,C

NEW QUESTION # 986

The IP prefix list configuration on a Huawei router is shown below. Which of the following routes can match this IP prefix list?

bash

Copy

```
[huawei] ip ip-prefix test index 10 permit 10.0.0.0 8 less-equal 32
```

- A. 10.1.1.0/24
- B. 10.1.1.0/6
- C. 10.1.1.1/32
- D. 10.0.0.0/16

Answer: A,C,D

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

1. Understanding the Prefix List Configuration:

The command `ip ip-prefix test index 10 permit 10.0.0.0 8 less-equal 32` defines the following:

- * The prefix base is 10.0.0.0 with a mask length of 8 bits.
- * The less-equal 32 condition allows routes with mask lengths ranging from 8 to 32 bits to match.

2. Analysis of Each Route:

Option A: 10.1.1.1/32

* Correct.

* The prefix 10.1.1.1/32 falls within the 10.0.0.0/8 network range and has a mask length of 32 bits, which satisfies the less-equal 32 condition.

Option B: 10.1.1.0/6

* Incorrect.

* The prefix 10.1.1.0/6 has a mask length of 6 bits, which is shorter than the base prefix length of 8. It does not satisfy the condition.

Option C: 10.1.1.0/24

* Correct.

* The prefix 10.1.1.0/24 falls within the 10.0.0.0/8 network range and has a mask length of 24 bits, which satisfies the less-equal 32 condition.

Option D: 10.0.0.0/16

* Correct.

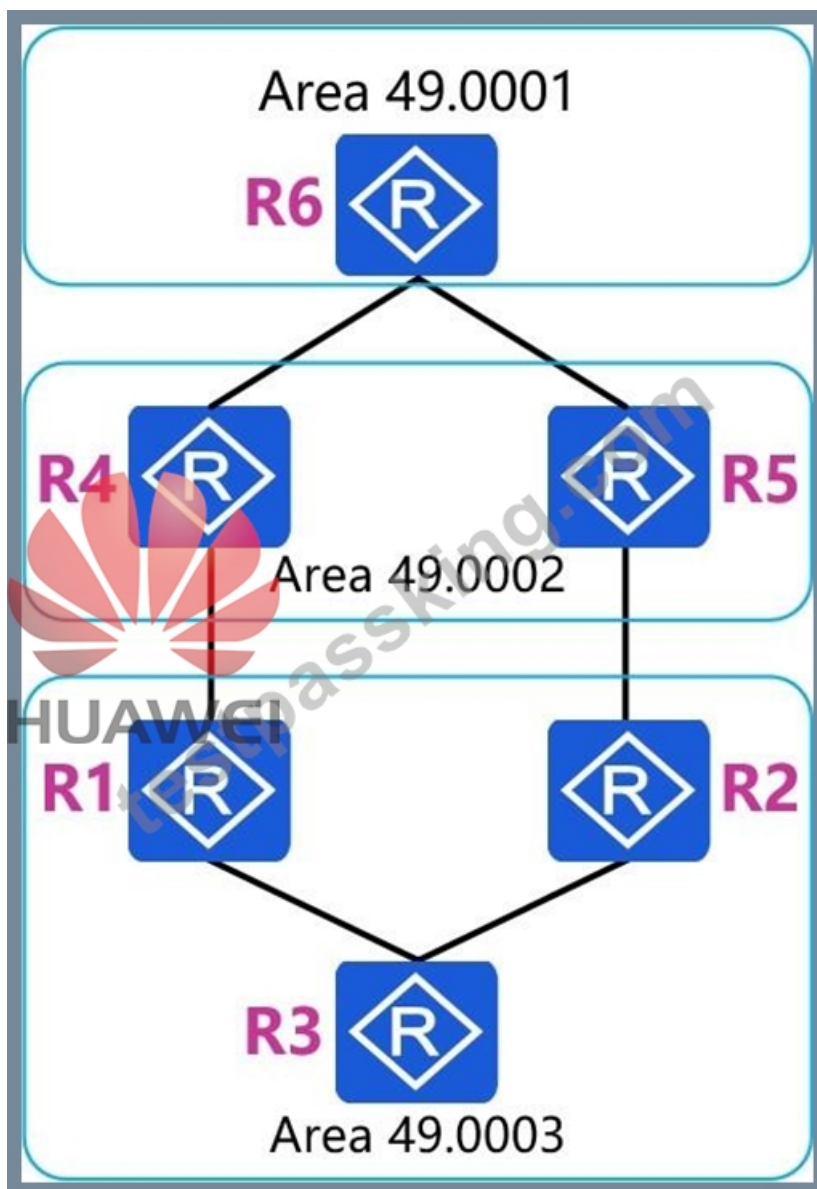

* The prefix 10.0.0.0/16 falls within the 10.0.0.0/8 network range and has a mask length of 16 bits, which satisfies the less-equal 32 condition.

3. Summary:

* The prefixes that match the configuration are 10.1.1.1/32, 10.1.1.0/24, and 10.0.0.0/16.

NEW QUESTION # 987

As shown in the figure, all routers run IS-IS. R3 is a Level-1 router, R6 is a Level-2 router, and other routers are Level-1-2 routers.

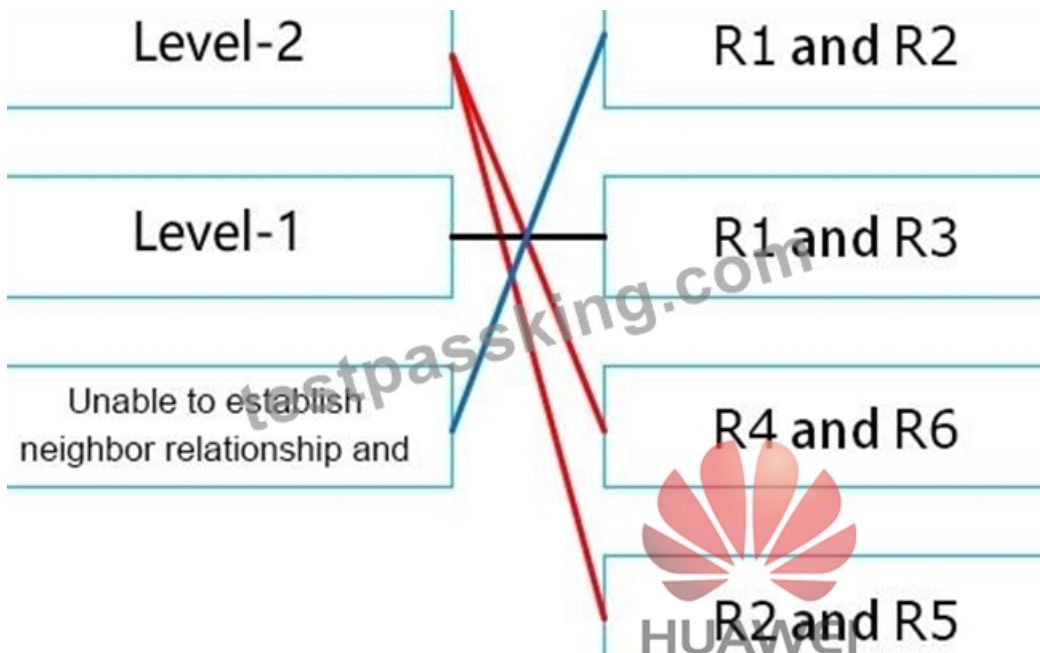

What are the types of neighbor relationships between routers?

Level-2	R1 and R2
Level-1	R1 and R3
Unable to establish neighbor relationship and	R4 and R6
	R2 and R5

Answer:

Explanation:

NEW QUESTION # 988

Which of the following statements regarding the BGP error display of a router false?

```
<HUAWEI>display bgp error
Error Type      : Peer Error
Date/Time       : 2010-03-22 12:40:39
Peer Address    : 10.1.1.5
Error Info      : Incorrect remote AS
```

- A. The error occurred at 12:40:39 on March 22, 2010.
- B. Error Type indicates that the BGP error is caused by the neighbor relationship error.
- C. The neighbor address of this router is 10.1.1.5.
- D. The error may be caused by the incorrect neighbor address.

Answer: D

Explanation:

The error indicates "Incorrect remote AS," which refers to a mismatch in the autonomous system (AS) numbers during BGP peer configuration. This issue is unrelated to the neighbor address. The neighbor address (10.1.1.5) and timestamp (2010-03-22 12:40:39) provided in the output are correct, and the error type confirms a neighbor relationship issue.

NEW QUESTION # 989

In IPv6, NDP (Neighbor Discovery Protocol) uses multiple types of ICMPv6 packets. Which of the following functions are RS (Router Solicitation) packets used for?

- A. Redirection
- B. Address resolution
- C. Prefix readdressing
- D. Duplicate address detection

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

* Neighbor Discovery Protocol (NDP) replaces ARP in IPv6 and uses ICMPv6 messages for:

- * Router Solicitation (RS) # Sent by hosts to request Router Advertisement (RA) messages.
 - * Router Advertisement (RA) # Sent by routers to announce prefixes and network parameters.
 - * Neighbor Solicitation (NS) # Used for address resolution and Duplicate Address Detection (DAD).
 - * Neighbor Advertisement (NA) # Sent in response to NS messages.
 - * Redirect # Used by routers to redirect hosts to better gateways.
 - * RS is not directly used for address resolution; Neighbor Solicitation (NS) does this, so the answer should be D.
- # Reference: Huawei HCIA-Datcom Study Guide, NDP and ICMPv6 Packet Types.
