At QuestionsTube, you can read HPE7-A01 free demo questions in pdf file, so you can check the questions and answers before deciding to download the HP HPE7-A01 practice questions. These free demo questions are parts of the HPE7-A01 exam questions. Download and read them carefully, you will find that the HPE7-A01 test questions of QuestionsTube will be your great learning materials online. Share some HPE7-A01 exam online questions below.

1. How is Multicast Transmission Optimization implemented in an HPE Aruba wireless network?

BONUS!!! Download part of DumpsReview HPE7-A01 dumps for free: <https://drive.google.com/open?id=1DCYdukGa5PtRullovCAI-sZd00JJ3x-c>

In the era of rapid development in the IT industry, we have to look at those IT people with new eyes. They use their high-end technology to create many convenient place for us. And save a lot of manpower and material resources for the state and enterprises. And even reached unimaginable effect. Of course, their income must be very high. Do you want to be the kind of person? Do you envy them? Or you are also IT person, but you do not get this kind of success. Do not worry, DumpsReview's HP HPE7-A01 Exam Material can help you to get what you want. To select DumpsReview is equivalent to choose a success.

Many people now want to obtain the HPE7-A01 certificate. Because getting a certification can really help you prove your strength, especially in today's competitive pressure. The science and technology are very developed now. If you don't improve your soft power, you are really likely to be replaced. Our HPE7-A01 Exam Preparation can help you improve your uniqueness. And our HPE7-A01 study materials contain the most latest information not only on the content but also on the displays.

TOP HPE7-A01 Valid Test Papers 100% Pass | Valid HP Aruba Certified Campus Access Professional Exam Pass Guarantee Pass for sure

Instant answer feedback allows you to identify your vulnerabilities in a timely manner, so as to make up for your weaknesses. With our HPE7-A01 practice quiz, you will find that the preparation process is not only relaxed and joyful, but also greatly improves the probability of passing the HPE7-A01 Exam. And our pass rate of the HPE7-A01 training materials is high as 98% to 100%. You are bound to pass the exam if you buy our HPE7-A01 learning guide.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

What is the best practice for handling voice traffic with dynamic segmentation on AOS-CX switches?

- **A. Switch authentication and local forwarding of the voice traffic**
- B. Central authentication and port-based tunneling of the voice traffic.
- C. Controller authentication and port-based tunneling of all traffic
- D. Switch authentication and user-based tunneling of the voice traffic.

Answer: A

Explanation:

Explanation

This is the best practice for handling voice traffic with dynamic segmentation on AOS-CX switches. Dynamic segmentation is a feature that allows AOS-CX switches to tunnel user traffic to a controller or another switch based on user roles and policies. For voice traffic, it is recommended to use switch authentication and local forwarding, which means the voice devices are authenticated by the switch and their traffic is forwarded locally without tunneling. This reduces latency and jitter for voice traffic and improves voice quality. The other options are incorrect because they either use central authentication or tunneling, which are not optimal for voice traffic. References:

NEW QUESTION # 14

Which statement best describes QoS?

- A. Determining which traffic passes specified quality metrics
- **B. Identifying specific traffic for special treatment**
- C. Identifying the quality of the connection
- D. Scoring traffic based on the quality of the contents

Answer: B

Explanation:

Explanation

QoS stands for Quality of Service and is a mechanism that allows network devices to prioritize and differentiate traffic based on certain criteria, such as application type, source, destination, etc3. QoS involves identifying specific traffic for special treatment and applying policies and actions to improve its performance or meet certain service level agreements (SLAs) . QoS can help network devices to manage congestion, delay, jitter, packet loss, bandwidth allocation, etc., for different types of traffic . QoS can be implemented at various layers of the network stack and across different network domains. References:

NEW QUESTION # 15

What is the order of operations for Key Management service for a wireless client roaming from AP1 to AP2?

Operation	Order
Cache the client's information	
Client associates and authenticates to AP1	
Generate Pairwise Master Key keys for AP1's neighbors	
Get AP1 neighbor AP list	
Share Pairwise Master Key along with VLAN and User Role to target APs	

Answer:

Explanation:

Operation	Order
Cache the client's information	
Client associates and authenticates to AP1	
Generate Pairwise Master Key keys for AP1's neighbors	
Get AP1 neighbor AP list	
Share Pairwise Master Key along with VLAN and User Role to target APs	

Explanation:

Order
Client associates and authenticates to AP1
Cache the client's information
Generate Pairwise Master Key keys for AP1's neighbors
Get AP1 neighbor AP list
Share Pairwise Master Key along with VLAN and User Role to target APs

NEW QUESTION # 16

You are deploying Aruba CX 6300's with the customers requirement to only allow one (1) VoIP phone and one (1) device. The following local role gets assigned to the phone port-access role VoIP device-traffic-class voice. What set of commands best fits this requirement?

- A. interface 1/1/1
aaa authentication port-access auth-mode multi-domain
- B. interface 1/1/1
aaa authentication port-access client-limit 2
aaa authentication port-access auth-mode client-mode
- C. interface 1/1/1
aaa authentication port-access client-limit multi-domain 2 aaa authentication port-access auth-mode multi-domain
- D. interface 1/1/1
aaa authentication port-access client-limit 1
aaa authentication port-access auth-mode device-mode

Answer: C

Explanation:

Aruba CX 6300 switches support various features to control the port access for different types of devices, such as client mode, device mode, and multidomain mode. These features can help limit the number of clients that can connect to a port and prevent unauthorized devices from accessing the network.

This is because option C shows how to configure the client limit and the auth-mode for a specific port using the interface command and the aaa authentication port-access command. The client limit specifies the maximum number of clients that can connect to a port. The auth-mode specifies the authentication mode for the port. In this case, option C sets both parameters to multi-domain mode, which allows only one voice device and one data device to be authenticated on a port

NEW QUESTION # 17

Your manufacturing client is having installers deploy seventy headless scanners and fifty IP cameras in their warehouse. These new devices do not support 802.1X authentication.

How can HPE Aruba reduce the IT administration overhead associated with this deployment while maintaining a secure environment using MPSK?

- A. MPSK Local will allow the cameras to share a key and the scanners to share a different key.
- B. Have the MPSK gateway derive the unique pre-shared keys based on the MAC OUI.
- **C. Use MPSK Local to automatically provide unique pre-shared keys for devices.**
- D. Have the installers generate keys with ClearPass Self Service Registration.

Answer: C

Explanation:

Explanation

MPSK Local is a feature that can reduce the IT administration overhead associated with deploying devices that do not support 802.1X authentication while maintaining a secure environment. MPSK Local allows the switch to automatically generate and assign unique pre-shared keys for devices based on their MAC addresses, without requiring any configuration on the devices or an external authentication server. The other options are incorrect because they either require manual intervention by the installers or the MPSK gateway, or they do not provide unique pre-shared keys for devices. References:
