Besides, you have varied choices for there are three versions of our ITIL-4-Specialist-Create-Deliver-and-Support practice materials. At the same time, you are bound to pass the exam and get your desired certification for the validity and accuracy of our ITIL-4-Specialist-Create-Deliver-and-Support training guide.

ITIL 4 Specialist: Create, Deliver and Support Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36

What is the goal of the 'shift-left' approach?

- A. Integrating multiple suppliers in a value stream for effective service management
- B. Implementing Agile practices for continuous software development
- C. Repositioning tasks to earlier stages in the process to boost workflow efficiency
- D. Automating repetitive processes using robots and AI

Answer: C

Explanation:

The goal of the 'shift-left' approach is repositioning tasks to earlier stages in the process to boost workflow efficiency (A). The ITIL 4 Specialist: Create, Deliver and Support guide (Section 3.3.1) explicitly defines shift-left as a strategy to move activities, such as support or testing, closer to the point of origin-often to users or frontline teams-to reduce delays, improve response times, and enhance overall service delivery.

This approach leverages automation and self-service tools to empower users, thereby streamlining workflows and reducing the burden on higher-tier support teams. Option B focuses on automation alone, which is a supporting mechanism but not the core goal; option C relates to Agile methodologies, which are distinct from shift-left; and option D pertains to supplier integration, which is unrelated to this concept. The emphasis on efficiency is further supported by examples like self-service password resets, where tasks are shifted to users, aligning with ITIL's focus on value co-creation.

Reference: ITIL 4 Specialist: Create, Deliver and Support, Section 3.3.1 - Shift-Left Approach and Workflow Optimization.

NEW QUESTION # 37

Which approach may help to improve incident resolution times by moving support activities from specialist teams to frontline teams or users?

- A. Shortest item first
- B. Swarming

- C. Robotic process automation
- **D. Shift-left**

Answer: D

Explanation:

The shift-left approach improves incident resolution times by moving support activities closer to frontline teams or users, enabling faster and more efficient handling.

NEW QUESTION # 38

A service has been in use for a number of years, and is not being developed or updated. Customers are not happy because they think that the applications that support the service are missing important functionality.

Which practice is most likely to identify this issue and initiate improvement actions?

- A. Service desk
- **B. Service level management**
- C. Service validation and testing
- D. Knowledge management

Answer: B

Explanation:

Service level management focuses on understanding and capturing customer expectations and experiences, making it the practice most likely to identify dissatisfaction and initiate improvement actions.

NEW QUESTION # 39

Which statement about 'service integration as a service' is CORRECT?

- A. The service integrator can be easily replaced by other vendors to leverage better pricing
- B. Multiple vendors provide the service integration and management function
- C. The service integrator does not deliver any services to the organization
- **D. The service integrator provides services and manages other vendors**

Answer: D

Explanation:

In service integration as a service, the service integrator both provides services and manages other vendors, ensuring seamless delivery across multiple suppliers.

NEW QUESTION # 40

A large organization has a centralized service desk, and many different teams that help to resolve incidents and manage service requests. They also use many different suppliers to support these activities.

What is the minimum number of different value streams that they need, in order to manage this work?

- A. One value stream for resolving incidents, and a separate value stream for managing service requests
- B. One value stream for the organization, and separate value streams for each team
- **C. One value stream for all activity that arrives via the service desk**
- D. One value stream for the organization, and separate value streams for each supplier

Answer: C

Explanation:

A single value stream can manage all activity that arrives via the service desk, regardless of which internal team or supplier is involved, enabling streamlined and consistent handling of incidents and service requests.

NEW QUESTION # 41

.....
