

Valid JN0-253 Exam Experience & Real JN0-253 Torrent

P.S. Free 2025 Juniper JN0-253 dumps are available on Google Drive shared by TorrentExam: <https://drive.google.com/open?id=1IiiooEm4RTvwOThSgH3absqBIroJEgZD>

As old saying goes, all roads lead to Rome. If you are still looking for your real interests and have no specific plan, our JN0-253 exam questions can be your new challenge. Now, people are blundering. Few people can calm down and ask what they really want. You live so tired now. Learning of our JN0-253 practice materials is the best way to stop your busy life. And you will have a totally different life if you just get the JN0-253 certification.

We guarantee that after purchasing our JN0-253 exam torrent, we will deliver the product to you as soon as possible within ten minutes. So you don't need to wait for a long time and worry about the delivery time or any delay. We will transfer our JN0-253 prep torrent to you online immediately, and this service is also the reason why our JN0-253 Test Braindumps can win people's heart and mind. And what is more, if you study with our JN0-253 training guide for only 20 to 30 hours, then you will be ready to take the JN0-253 exam with confidence to pass it.

Real JN0-253 Torrent - JN0-253 Valid Test Format

At TorrentExam, we strive hard to offer a comprehensive Mist AI, Associate (JNCIA-MistAI) (JN0-253) exam questions preparation material bundle pack. The product available at TorrentExam includes Juniper JN0-253 Real Dumps pdf and mock tests (desktop and web-based). Practice exams give an experience of taking the Mist AI, Associate (JNCIA-MistAI) (JN0-253) actual exam.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q49-Q54):

NEW QUESTION # 49

Which two statements are correct after you request the subscription renewal using e-mail? (Choose two.)

- A. Juniper Mist sends a welcome package with promotional materials.
- B. Juniper Mist e-mails the support request for the selected subscriptions.
- C. Juniper Mist sends a cancellation notice.
- D. Juniper Mist processes the order and sends an activation code.

Answer: B,D

Explanation:

When a customer requests a subscription renewal for Juniper Mist services via e-mail, the process is handled through a coordinated workflow between the Juniper Mist Cloud licensing system and Juniper Support. The renewal request ensures that existing service

entitlements-such as Wireless Assurance, Wired Assurance, WAN Assurance, Marvis AI, or Premium Analytics-continue without interruption.

According to the Juniper Mist Cloud Licensing and Subscription Management Guide, the renewal workflow is described as follows: "When a renewal request is submitted via e-mail, Juniper Mist support receives and validates the request, initiates processing for the selected subscriptions, and issues a new activation code once the renewal is completed." Here's what happens after the renewal request:

- * B. The Juniper Mist system sends a confirmation e-mail acknowledging the renewal request and routes it to support for processing.
- * C. Once processed, Juniper Mist generates and delivers an activation code via e-mail that must be entered into the Mist portal to activate the renewed subscription(s).

Incorrect options:

- * A: No promotional materials or physical packages are sent.
- * D: A cancellation notice is not sent for renewal requests; it applies only to expired or terminated subscriptions.

Therefore, the correct answers are B. Juniper Mist e-mails the support request for the selected subscriptions and C. Juniper Mist processes the order and sends an activation code.

NEW QUESTION # 50

Which two statements are correct about the switch configuration hierarchy in Juniper Mist? (Choose two.)

- A. The switch-specific configuration cannot override switch templates.
- B. The switch templates exist at the site level.
- C. The switch templates exist at the organization level.
- D. The switch configuration cannot be managed at the organization level.

Answer: B,C

Explanation:

The Juniper Mist Wired Assurance platform uses a hierarchical configuration model to manage switch settings efficiently across organizations and sites. This hierarchy provides flexibility by allowing administrators to apply global configurations through templates at the organization level, while also permitting site-specific customizations.

According to the Juniper Mist Wired Assurance Configuration and Template Management Guide, the configuration hierarchy functions as follows:

"Switch templates can be created at both the organization and site levels. Organization-level templates define global configurations, while site-level templates provide location-specific customization that overrides the organization-level settings where applicable." This structure enables consistent policy deployment while preserving site autonomy for unique configurations. For example, global VLAN or QoS configurations can be managed at the organization level, and local templates can adjust settings for switch ports or device groups at specific sites.

Switch-specific overrides are allowed within the hierarchy, ensuring flexibility in cases where unique port or feature configurations are required.

Therefore:

- * B is correct because switch templates exist at the organization level for global use.
- * C is correct because switch templates also exist at the site level for localized adjustments.

NEW QUESTION # 51

What are two benefits of Juniper Mist Wired Assurance? (Choose two.)

- A. It is the only way to configure Virtual Chassis settings for Juniper EX switches.
- B. Configuration settings for multi-gig access ports that are not available in the Junos CLI.
- C. Support for ZTP.
- D. Ability to deploy campus fabric architectures in minutes based on intent.

Answer: C,D

Explanation:

Juniper Mist Wired Assurance provides several benefits aimed at simplifying network management and enhancing performance.

Ability to deploy campus fabric architectures in minutes based on intent: Wired Assurance leverages automation and intent-based

networking to quickly deploy and manage complex campus fabric architectures. This feature significantly reduces the time and effort required to set up and maintain such networks.

Support for ZTP (Zero Touch Provisioning): Wired Assurance includes ZTP capabilities, which allow for the automatic provisioning and configuration of switches as soon as they are connected to the network. This reduces the need for manual intervention and speeds up the deployment process. These features are part of a broader suite of tools that Wired Assurance provides to streamline network operations, improve reliability, and enhance visibility into network performance.

NEW QUESTION # 52

Your organization has a Marvis subscription. You have an issue with an access point (AP) that does not power on. You decide to open a support ticket.

In this scenario, what does Marvis do while you are filling in the details on the New Ticket screen?

- A. Marvis creates the support tickets.
- **B. Marvis provides possible solutions to AP power problems from the Juniper Mist documentation.**
- C. Marvis provides links to Internet resources about AP power problems.
- D. Marvis sends an e-mail to support@juniper.net on your behalf.

Answer: B

Explanation:

When an administrator begins to open a support ticket within the Juniper Mist portal, the Marvis Virtual Network Assistant proactively assists by presenting relevant, AI-driven recommendations and documentation.

According to the Juniper Mist Marvis Virtual Network Assistant Guide, this process is described as:

"While an administrator creates a support case, Marvis automatically searches the Mist knowledge base and presents probable causes and recommended solutions based on the detected issue type." If the issue involves an AP that does not power on, Marvis retrieves contextual data such as PoE status, switch port state, and recent telemetry logs, then provides automated guidance—for example, checking PoE configurations or cable connectivity.

Thus, while the administrator fills in the "New Ticket" details, Marvis provides potential solutions directly from Juniper Mist's documentation, potentially resolving the issue before a support case is even submitted.

The correct answer is D. Marvis provides possible solutions to AP power problems from the Juniper Mist documentation.

NEW QUESTION # 53

Which Radio Resource Management (RRM) changes are only made once a day between 2:00 AM and 3:00 AM local time?

- **A. channel and power settings across a site based on long-term statistics and baselines**
- B. channel and power level changes triggered by SSID scheduling
- C. channel and power level changes triggered by DFS events
- D. RF template changes to channel width

Answer: A

Explanation:

Identify the Changes: Radio Resource Management (RRM) changes and their timings.

RRM Changes:

Channel and power settings based on long-term statistics.

RF template changes to channel width.

Changes triggered by SSID scheduling.

Changes triggered by DFS events.

Timing of Changes:

Long-term RRM changes to channel and power settings are typically scheduled once a day to avoid disrupting network performance.
