Free PDF 2025 Juniper JN0-637: High Hit-Rate Valid Security, Professional (JNCIP-SEC) Exam Format

Our company is a professional certificate exam materials provider, we have occupied in this field for years, and we have rich experiences. JN0-637 exam cram is edited by professional experts, and they are quite familiar with the exam center, and therefore, the quality can be guaranteed. In addition, JN0-637 training materials contain both questions and answers, and it also has certain quantity, and it's enough for you to pass the exam. In order to strengthen your confidence for JN0-637 Training Materials, we are pass guarantee and money back guarantee, if you fail to pass the exam we will give you full refund, and no other questions will be asked.

Juniper JN0-637 Exam Syllabus Topics:

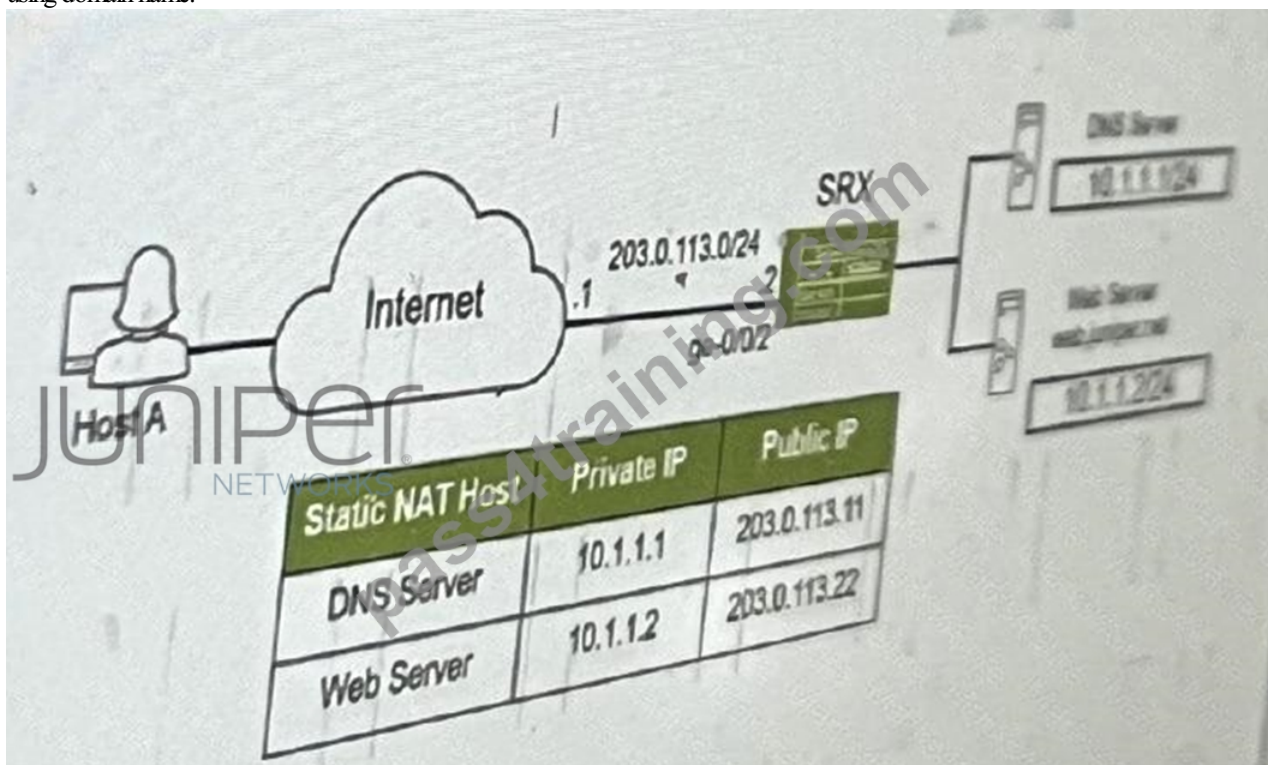

--

Topic	Details
Topic 1	<ul style="list-style-type: none"> Automated Threat Mitigation: This topic covers Automated Threat Mitigation concepts and emphasizes implementing and managing threat mitigation strategies.
Topic 2	<ul style="list-style-type: none"> Advanced IPsec VPNs: Focusing on networking professionals, this part covers advanced IPsec VPN concepts and requires candidates to demonstrate their skills in real-world applications.
Topic 3	<ul style="list-style-type: none"> Multinode High Availability (HA): In this topic, aspiring networking professionals get knowledge about multinode HA concepts. To pass the exam, candidates must learn to configure or monitor HA systems.
Topic 4	<ul style="list-style-type: none"> Advanced Network Address Translation (NAT): This section evaluates networking professionals' expertise in advanced NAT functionalities and their ability to manage complex NAT scenarios.
Topic 5	<ul style="list-style-type: none"> Logical Systems and Tenant Systems: This topic of the exam explores the concepts and functionalities of logical systems and tenant systems.
Topic 6	<ul style="list-style-type: none"> Advanced Policy-Based Routing (APBR): This topic emphasizes on advanced policy-based routing concepts and practical configuration or monitoring tasks.

Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q79-Q84):

NEW QUESTION # 79

The SRX series device is performing static NAT. you want to ensure that host A can reach the internal webserver www.juniper.net using domain name.

Referring to the exhibit, which two Junos features are required to accomplish this task? (Choose two.)

- A. persistent NAT
- B. proxy ARP
- C. STUN
- D. DNS doctoring

Answer: B,D

NEW QUESTION # 80

Which two statements about the differences between chassis cluster and multinode HA on SRX series devices are true? (Choose Two)

- A. Multinode HA supports Layer 2 and Layer 3 connectivity between nodes.
- B. Multinode HA member nodes require Layer 2 connectivity.
- C. Multinode HA requires Layer 3 connectivity between nodes.
- D. Chassis cluster member nodes require Layer 2 connectivity.

Answer: A,D

NEW QUESTION # 81

Exhibit

```
user@srx> show interfaces ge-0/0/5.0 extensive | find security
Security : Zone: dmz
Allowed host-inbound traffic : bootp bfd bgp dns dvmrp igmp ldp mdp nhrp ospf
ospf3 pgm pim rip ripng router-discovery rsvp sap vrrp dhcp finger
```

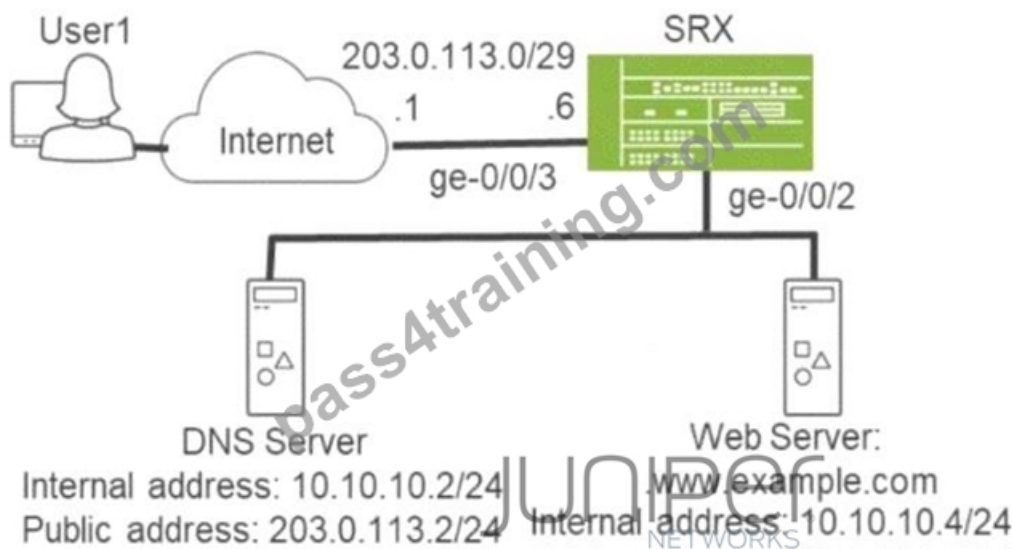

Referring to the exhibit, which three protocols will be allowed on the ge-0/0/5.0 interface? (Choose three.)

- A. DHCP
- B. NTP
- C. IPsec
- D. OSPF
- E. IBGP

Answer: B,C,D

NEW QUESTION # 82

Exhibit:

You are asked to ensure that Internet users can access the company's internal webserver using its FQDN.

However, the internal DNS server's A record only points to the webserver's private address.

Referring to the exhibit, which two actions are required to complete this task? (Choose two.)

- A. Configure static NAT for both the DNS server and the webserver.
- B. Configure proxy ARP on ge-0/0/3.
- C. Configure destination NAT for both the DNS server and the webserver.
- D. Disable the DNS ALG.

Answer: A,B

Explanation:

In the scenario where internal users are trying to access the company's web server via its FQDN but the DNS server resolves to a

private IP, two key actions are needed:

* Static NAT (Answer B): Since the internal DNS server resolves the web server to its private IP address (10.10.10.4/24), you need to configure static NAT for both the DNS server and the webserver. This will ensure that requests coming from the internet will be translated to the web server's public IP (203.0.113.4) and the DNS server's public IP (203.0.113.2).

Example Command:

```
bash
```

```
set security nat static rule-set public-to-private from zone untrust
```

```
set security nat static rule-set public-to-private rule dns-server match destination-address 203.0.113.2/32 set security nat static rule-set public-to-private rule dns-server then static-nat-prefix 10.10.10.2/32 set security nat static rule-set public-to-private rule web-server match destination-address 203.0.113.4/32 set security nat static rule-set public-to-private rule web-server then static-nat-prefix 10.10.10.4/32
```

* Proxy ARP (Answer D): The SRX needs to respond to ARP requests for the public IP addresses of both the DNS and webserver on the interface facing the internet (ge-0/0/3). This allows the SRX to handle requests directed at the public IPs.

Example Command:

```
set interfaces ge-0/0/3 unit 0 family inet proxy-arp interface-address 203.0.113.2/32 set interfaces ge-0/0/3 unit 0 family inet proxy-arp interface-address 203.0.113.4/32
```

These two configurations allow external users to access the internal web server via its public IP, as resolved by the DNS server.

NEW QUESTION # 83

Which two statements about policy enforcer and the Forescout integration are true? (Choose two)

- A. 802.1X authenticated devices are supported.
- B. A Forescout CounterACT agent must be installed on third-party devices
- C. A Forescout CounterACT agent is agentless and does not need to be installed on third-party device
- D. 802.1X authenticated devices are not supported.

Answer: A,C

NEW QUESTION # 84
