New NCS-Core Exam Vce | Dumps NCS-Core Collection

One major difference which makes the Nutanix NCS-Core exam dumps different from others is that the exam questions are updated after feedback from more than 90,000 professionals and experts around the globe. In addition, the Nutanix NCS-Core Exam Questions are very similar to actual Nutanix Certified Services Core Infrastructure Professional NCS-Core exam questions. Hence, it helps you to achieve a high grade on the very first attempt.

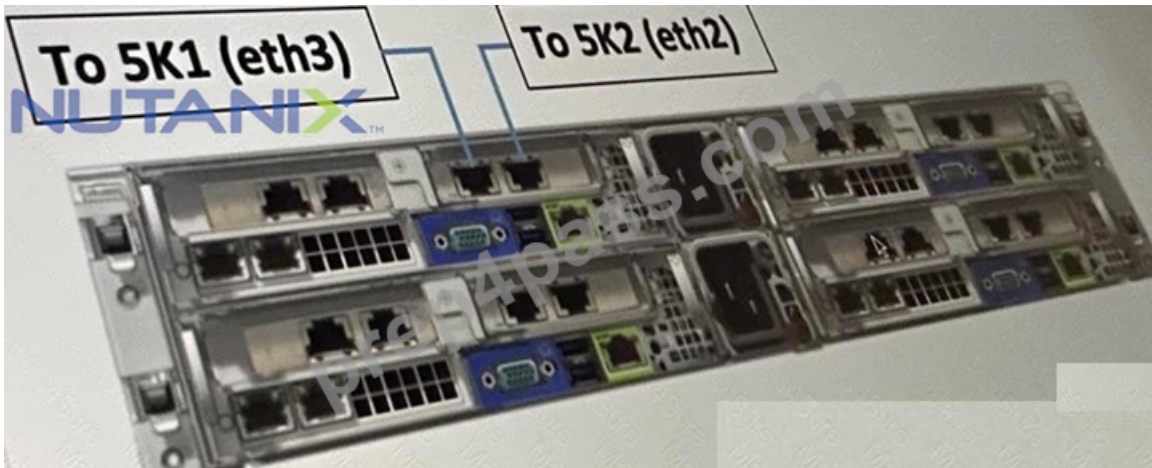

Nutanix NCS-Core certification is ideal for IT professionals who work in data centers, virtualization, and cloud computing. Nutanix Certified Services Core Infrastructure Professional certification exam covers a broad range of topics, including Nutanix cluster components, storage and networking, hypervisor integration, and application integration. NCS-Core exam is designed to test the candidate's understanding of Nutanix core infrastructure components and how they integrate with other systems.

Nutanix NCS-Core Certification Exam is a professional certification that validates the skills and knowledge of IT professionals in core infrastructure solutions. NCS-Core Exam is designed to test the expertise of candidates in various areas of infrastructure solutions, including virtualization, networking, storage, and cloud computing. Nutanix Certified Services Core Infrastructure Professional certification is recognized globally and is highly valued by organizations looking for skilled professionals to manage their IT infrastructure.

Nutanix Certified Services Core Infrastructure Professional Sample Questions (Q169-Q174):

NEW QUESTION # 169

Refer to the exhibit.

On a four-node NX-3460 cluster, two 10G NICs are connected to redundant Cisco ToR 5K switches as shown in the first exhibit. Port On a four-node NX-3460 cluster, two 10G NICs are connected to redundant Cisco TOR 5k switches as shown in the first exhibit. Port failover must be tested.

The network configuration output from the CVM is shown in the second exhibit. To test failover, a shut command is executed on the switchport that connects the node to the 5k1 switch.

Refer to the exhibit.

- A. Passive link is disconnected. Active link takes over.
- B. Passive link takes over. HA Failover takes place.
- C. Active link is disconnected. Passive link takes over.
- D. Active link takes over. HA Failover takes place.

Answer: C

Explanation:

In the scenario described, the configuration shown in the exhibit indicates that there is an "active-backup" bond mode. If a shut command is executed on the switchport that connects the node to the 5k1 switch (assuming it's the active link), the passive link should take over. This response ensures no loss of connectivity as the passive link becomes active in the absence of the primary (active) link. NEW QUESTION # 170

According to Nutanix best practices, which interface configuration should be used when setting up the default bond?

- A. 10G uplinks only or 25G uplinks only
- B. One 1G uplink paired with one 10G uplink
- C. One 10G uplink paired with one 25G uplink
- D. One 10G uplink only

Answer: A

Explanation:

According to Nutanix best practices for network configuration, it is recommended to use either:

* 10G uplinks only: This provides sufficient bandwidth for typical data center operations.

* 25G uplinks only: This option is suitable for higher bandwidth requirements. Mixing uplinks with different speeds, such as 10G and 25G, is not recommended as it can lead to non-optimal performance and complexity in handling traffic.

References:

* Nutanix Bible (<https://www.nutanixbible.com>), specifically sections discussing network interface configurations.

* Nutanix Network Administration Guide, which details best practices for network setup.

NEW QUESTION # 171

The networking team makes changes to the Top of Rack switches to which the Nutanix cluster are attached. A few VMs are able to communicate with each other on the same node but are unable to connect to other parts of the network.

What is the likely cause of this issue?

- A. There is a VLAN misconfiguration on the switch.
- B. The vNIC port is disconnected on the affected VMs.
- C. Jumbo Frame are misconfigured across ports.
- D. There is a VLAN misconfiguration on the VMs.

Answer: A

NEW QUESTION # 172

An administrator is deploying a three-tier application on a Nutanix Enterprise Cloud consisting of web, application, and database VMs. Traffic between the servers must be limited to specific services/ports. There is an application layer firewall VM deployed on one host in the cluster.

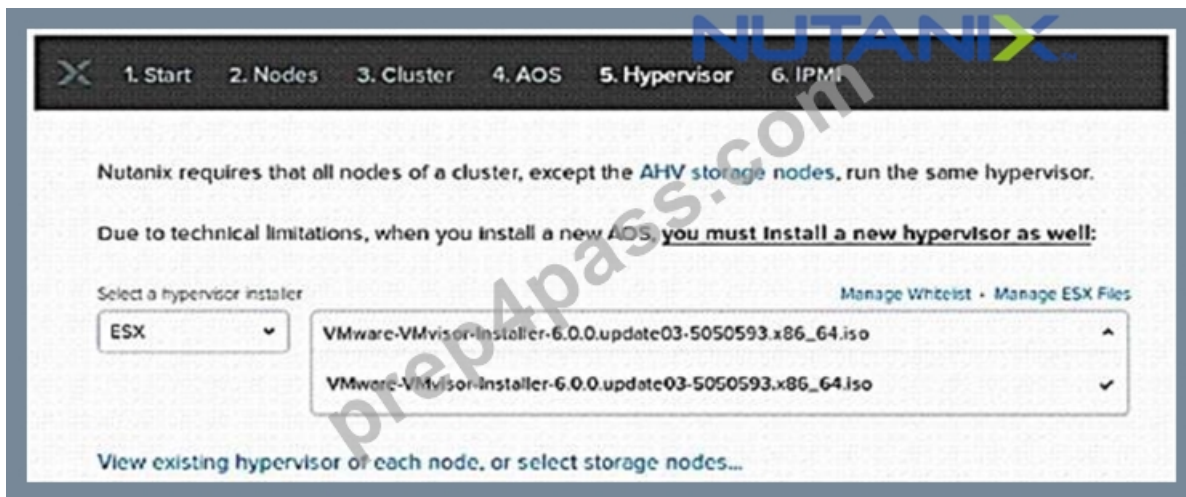

In which way should the administrator meet this requirement?

- A. Create a network for each type of VM, and use policy-based routing to control the traffic flow
- B. Configure a security policy and service chain redirecting the server traffic through the firewall
- C. Categorize the VMs in Prism Central and utilize Flow to set a security policy
- D. Separate the web, application and database VMs on to dedicated VLANs

Answer: C

NEW QUESTION # 173

Refer to the exhibit.

A consultant is installing AOS 5.10 and ESXi 6.5 on three nodes. During the Foundation process, ESXi 6.5 is not available as one of the choices for hypervisor.

Which solution should the consultant use?

- A. Upload ESXi image to /home/Nutanix/foundation/isos/hypervisor/esx.
- B. Update the Foundation whitelist from the support portal.
- C. Upload ESXi image to /home/Nutanix/foundation/nos/hypervisor/esx.
- D. Restart Foundation VM and refresh Foundation page.

Answer: A

NEW QUESTION # 174

.....

Our NCS-Core practice dumps are so popular that all our customers are giving high praise on its high-quality to help them pass the exams. Numerous of warning feedbacks from our worthy customers give us data and confidence. We have clear data collected from customers who chose our NCS-Core training engine, the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our NCS-Core exam questions!
