Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Platform Solutions, Services, and Tools: This section measures the expertise of security engineers and platform administrators in Palo Alto Networks NGFW and Prisma SASE products. It involves creating security and NAT policies, configuring Cloud-Delivered Security Services (CDSS) such as security profiles, User-ID and App-ID, decryption, and monitoring. It also covers the application of CDSS for IoT security, Enterprise Data Loss Prevention, SaaS Security, SD-WAN, GlobalProtect, Advanced WildFire, Threat Prevention, URL Filtering, and DNS security. Furthermore, it includes aligning AIOps with best practices through administration, dashboards, and Best Practice Assessments.
Topic 2	<ul style="list-style-type: none">GFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.

Topic 3	<ul style="list-style-type: none"> • NGFW and SASE Solution Functionality: This part assesses the knowledge of firewall administrators and network architects on the functions of various Palo Alto Networks firewalls including Cloud NGFWs, PA-Series, CN-Series, and VM-Series. It covers perimeter and core security, zone security and segmentation, high availability, security and NAT policy implementation, as well as monitoring and logging. Additionally, it includes the functionality of Prisma SD-WAN with WAN optimization, path and NAT policies, zone-based firewall, and monitoring, plus Prisma Access features such as remote user and network configuration, application access, policy enforcement, and logging. It also evaluates options for managing Strata and SASE solutions through Panorama and Strata Cloud Manager.

Palo Alto Networks Network Security Professional Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which two content updates can be pushed to next-generation firewalls from Panorama? (Choose two.)

- A. Advanced URL Filtering
- B. WildFire
- C. Applications and threats
- D. GlobalProtect data file

Answer: B,C

Explanation:

Applications and threats

Panorama can push application and threat signature updates to managed firewalls, ensuring consistent application and threat visibility. "Panorama uses dynamic updates to distribute the latest application and threat signature packs to all managed firewalls." (Source: Manage Content Updates in Panorama) WildFire Panorama also distributes WildFire signature updates to firewalls for real-time malware detection.

"WildFire updates provide the latest malware signatures to enhance detection and prevention, and can be deployed to all managed firewalls via Panorama." (Source: WildFire and Dynamic Updates)

NEW QUESTION # 26

In a service provider environment, what key advantage does implementing virtual systems provide for managing multiple customer environments?

- A. Shared threat prevention policies across all tenants
- B. Centralized authentication for all customer domains
- C. Logical separation of control and Security policy
- D. Unified logging across all virtual systems

Answer: C

Explanation:

Virtual systems provide logical separation in a single physical firewall, allowing different customers (or tenants) to have isolated control and security policies.

"Virtual systems enable service providers to offer logically separated, independent environments on a single firewall. Each virtual system can have its own security policies, interfaces, and administrators." (Source: Virtual Systems) This ensures secure, tenant-

specific segmentation within multi-tenant environments.

NEW QUESTION # 27

A network administrator obtains Palo Alto Networks Advanced Threat Prevention and Advanced DNS Security subscriptions for edge NGFWs and is setting up security profiles. Which step should be included in the initial configuration of the Advanced DNS Security service?

- A. Enable Advanced Threat Prevention with default settings and only focus on high-risk traffic.
- B. Create a decryption policy rule to decrypt DNS-over-TLS / port 853 traffic.
- C. Configure DNS Security signature policy settings to sinkhole malicious DNS queries.
- D. Create overrides for all company owned FQDNs.

Answer: C

Explanation:

Advanced DNS Security uses a signature policy to sinkhole malicious DNS queries and prevent them from resolving.

"The DNS Security service integrates with Anti-Spyware profiles, and you must configure signature policy settings to sinkhole malicious queries. This proactively stops traffic to known malicious domains." (Source: Configure DNS Security) Sinkholing ensures that DNS queries to malicious FQDNs are redirected to a safe IP, preventing compromise.

NEW QUESTION # 28

How does Strata Logging Service help resolve ever-increasing log retention needs for a company using Prisma Access?

- A. It can scale to meet the capacity needs of new locations as business grows.
- B. It increases resilience due to decentralized collection and storage of logs.
- C. Automatic selection of physical data storage regions decreases adoption time.
- D. Log traffic using the licensed bandwidth purchased for Prisma Access reduces overhead.

Answer: A

Explanation:

The Strata Logging Service offers scalable log storage to accommodate data growth, which ensures organizations can retain logs for compliance and threat hunting as their environments expand.

"The Strata Logging Service is designed to scale dynamically to accommodate growing log retention needs, allowing enterprises to maintain comprehensive visibility as they expand their network footprint." (Source: Strata Logging Service Overview)

NEW QUESTION # 29

Which action optimizes user experience across a segmented network architecture and implements the most effective method to maintain secure connectivity between branch and campus locations?

- A. Implement SD-WAN to route all traffic based on network performance metrics and use zone protection profiles.
- B. Configure a single campus firewall to handle the routing of all branch traffic.
- C. Configure all branch and campus firewalls to use a single shared broadcast domain.
- D. Establish site-to-site tunnels on each branch and campus firewall and have individual VLANs for each department.

Answer: A

Explanation:

SD-WAN solutions optimize application experience and provide secure, dynamic connectivity across distributed locations by leveraging real-time path metrics (latency, jitter, loss).

"By implementing SD-WAN, traffic is routed intelligently based on real-time network performance metrics.

Zone protection profiles ensure security while maximizing application performance." (Source: SD-WAN Architecture) Key advantage:

Secure connectivity and best user experience across campuses and branches.

NEW QUESTION # 30

Recent years many ambitious young men take part in Palo Alto Networks certification exams. Many candidates may wonder how to prepare for NetSec-Pro exam (questions and answers). My advice is that firstly you should inquire about exam details from exam center such as exam cost, how many times you can take exam per year and the exact date, how long the real test last, the examination requirements and syllabus. And then purchase our NetSec-Pro Exam Questions And Answers, you will clear exams certainly.
