ValidDumps is a trusted and reliable platform that has been helping NetApp Technology Solutions Professional Exam (NS0-005) exam candidates for many years. Over this long time period countless Network Appliance NS0-005 exam questions candidates have passed their dream NS0-005 Certification Exam. They all got help from ValidDumps Network Appliance Exam Questions and easily passed their challenging NS0-005 pdf exam.

Our experts are not slavish followers who just cut and paste the content into our NS0-005 practice materials, all NS0-005 exam questions are elaborately compiled by them. Just a small amount of money, but you can harvest colossal success with potential bright future. So we have the courage and justification to declare the number one position in this area, and choosing NS0-005 Actual Exam is choosing success.

Download NS0-005 Demo, NS0-005 Reliable Exam Labs

If you prepare well in advance, you'll be stress-free on the NetApp Technology Solutions Professional Exam NS0-005 exam day and thus perform well. Candidates can know where they stand by attempting the Network Appliance NS0-005 practice test. It can save you lots of time and money. The question on the Network Appliance NS0-005 Practice Test is quite similar to the Network Appliance NS0-005 questions that get asked on the NS0-005 exam day.

Network Appliance NetApp Technology Solutions Professional Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

What are two NetApp on-premises data storage systems that can be discovered and managed in NetApp BlueXP? (Choose two.)

- A. Element clusters
- B. E-Series
- C. Astra Data Store

- **D. StorageGRID**

Answer: B,D

Explanation:

A). E-Series: NetApp E-Series is a line of high-performance storage systems that are known for their reliability and efficiency, especially in data-intensive environments. These systems can be managed and monitored through NetApp BlueXP, allowing for centralized management and visibility.

D). StorageGRID: NetApp StorageGRID is an object storage solution designed for managing large-scale unstructured data. It is suitable for hybrid cloud environments and can be integrated with NetApp BlueXP for management and monitoring, providing a comprehensive view of data across various storage environments.

NEW QUESTION # 23

A storage administrator wants to expand an existing NetApp ONTAP AFF cluster with cost-effective nearline storage for archiving purposes.

What should the administrator do to accomplish this task?

- **A. Add a new FAS system to the existing AFF cluster.**
- B. Upgrade the AFF controllers to a higher system.
- C. Expand the cluster with a new AFF system.
- D. Add SSDs to the existing AFF cluster.

Answer: A

Explanation:

= Adding a new FAS system to the existing AFF cluster is a way to expand the storage capacity with cost-effective nearline storage for archiving purposes. A FAS system can use HDDs as the performance tier and tier cold data to cloud object storage using FabricPool, which is a NetApp data tiering technology that reduces the amount of physical capacity taken up by data. This way, the administrator can leverage the storage efficiencies of ONTAP and the low-cost storage of the cloud to archive data that is not frequently accessed. The AFF and FAS systems can be managed by the same ONTAP cluster and provide seamless data access and protection.

References = Storage Efficiencies - NetApp, Data Archiving: Cost-Effective Cloud Storage - NetApp, AFF Systems and Cloud Volumes ONTAP | NetApp.

NEW QUESTION # 24

The customer wants to deploy storage in the public cloud. The goal is to leverage native cloud infrastructure as well as NetApp's enterprise-grade technology that provides security, resilience, high availability, and cost-efficient performance.

Which NetApp solution meets these customer requirements?

- **A. Cloud Volumes ONTAP**
- B. StorageGRID
- C. AFF
- D. BlueXP observability

Answer: A

Explanation:

= Cloud Volumes ONTAP is a cloud-native storage solution that allows you to deploy and manage NetApp hybrid, multi-cloud storage and data services from on-premises sources and cloud service providers. It provides enterprise-grade data and file services, such as NFS, SMB/CIFS, iSCSI and S3, on AWS, Azure, and Google Cloud. It also offers high availability, data protection, storage efficiency, and cost-performance optimization features.

NEW QUESTION # 25

Which feature does StorageGRID use to distribute copies of object data?

- **A. application lifecycle management (ALM)**

- B. information lifecycle management (ILM)
- C. storage lifecycle management (SLM)
- D. object lifecycle management (OLM)

Answer: B

Explanation:

Information lifecycle management (ILM) is a feature of StorageGRID that enables you to create and apply policies that determine how objects are stored, replicated, protected, and distributed across the grid and public clouds. ILM policies can also specify how long objects are retained, when they are deleted, and how they are encrypted. ILM policies are based on object metadata, such as bucket name, object name, size, or custom tags. ILM policies help you optimize the performance, availability, durability, and cost of your object storage.

NEW QUESTION # 26

Which user interface should an administrator use to manage a NetApp storage solution that consists of E-Series E2800 controllers?

- A. NetApp Element software
- B. SANtricity System Manager
- C. NetApp BlueXP observability
- D. StorageGRID Grid Manager

Answer: B

Explanation:

SANtricity System Manager is a user interface that enables you to manage a NetApp storage solution that consists of E-Series E2800 controllers. SANtricity System Manager is a web-based graphical interface that provides easy configuration and maintenance of your E-Series storage systems. It also offers performance monitoring, data protection, security, and integration features. SANtricity System Manager is installed on each E-Series controller and can be accessed through a web browser.
