SAP Certified Professional - Solution Architect - SAP BTP Sample Questions (Q31-Q36):

NEW QUESTION # 31

Given the following use case parameters:

- * End users will need to restart messages in SAP S/4HANA using SAP AIF
- * End users will need to change message payload in SAP S/4HANA using SAP AIF
- * Clean core integration principles are to be applied.

Which of the following could be used as an "adapter" in the attached diagram? Note: There are 2 correct answers to this question.

- A. ODATA
- B. IDOC
- C. HTTP
- D. SOAP

Answer: B,D

NEW QUESTION # 32

The finance department is creating a series of reports for their line of business (LOB) users and would like to integrate the reports in a front-end portal. They would like the LOB users to maintain the portal, as opposed to IT. As a solution architect, they come to you to recommend which SAP BTP service best fits their needs.

Which service would you recommend?

- A. SAP Build Work Zone, advanced edition
- B. SAP Fiori Launchpad
- C. SAP Launchpad Service
- D. SAP Build Work Zone, standard edition

Answer: A

Explanation:

The SAP Build Work Zone, advanced edition is the best fit for the finance department's requirement to integrate reports into a front-end portal and allow Line of Business (LOB) users to maintain the portal.

* Why SAP Build Work Zone, Advanced Edition?

* It provides a flexible, enterprise-grade portal for integrating various business applications and content, such as reports, dashboards, and links.

* Allows LOB users to maintain and customize the portal independently, without relying on IT.

* Supports integration with non-SAP and SAP applications seamlessly, including embedding analytics and reports.

* Other Options:

* A (SAP Launchpad Service): Focused on enabling role-based access to SAP Fiori apps but lacks advanced customization features for LOB users.

* C (SAP Build Work Zone, Standard Edition): Suitable for basic workspaces but lacks advanced capabilities for LOB-driven maintenance.

* D (SAP Fiori Launchpad): Primarily used for launching SAP applications, not for integrating diverse reports or customizing portals.

References:

* SAP Build Work Zone Documentation

NEW QUESTION # 33

Applications on a customer's Marketing subaccount continuously crash due to insufficient memory.

At the global account level, what can you use to allocate more memory to the Marketing subaccount?

- A. Entitlement
- B. Quota

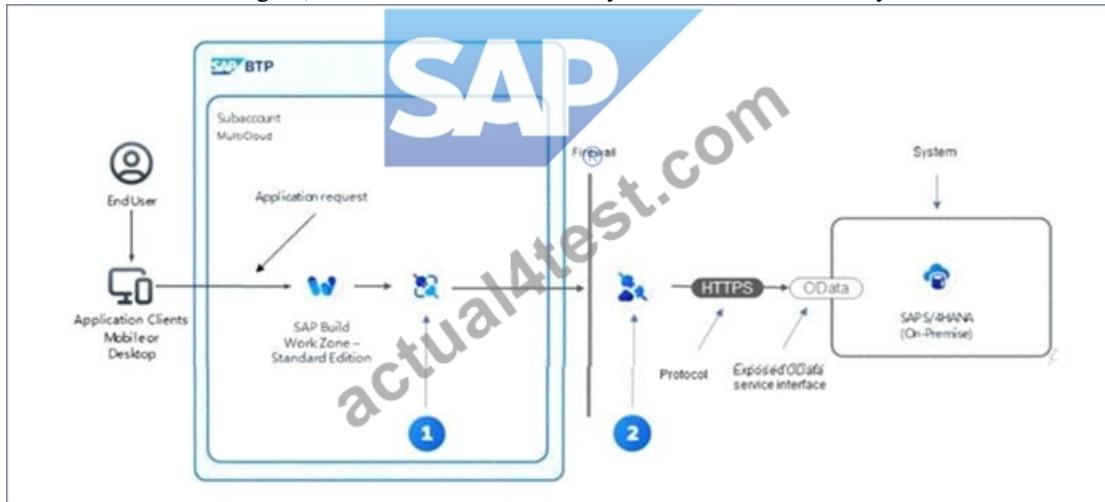

- C. Service Assignment
- D. Entity Assignment

Answer: B

NEW QUESTION # 34

A customer wants to establish connectivity between applications being executed by end users and the on- premise backend system (SAP S/4HANA).

Based on the attached diagram, which combination is necessary to establish the connectivity?

- A. Connectivity Service for 1 and Cloud Connector for 2
- B. Destination Service for 1 and Connectivity Service for 2
- C. Cloud Connector for 1 and Destination Service for 2
- D. Custom Connector for 1 and Connectivity Service for 2

Answer: A

Explanation:

To establish connectivity between the end-user applications and the SAP S/4HANA on-premise backend system based on the attached diagram, the necessary components are:

* Connectivity Service for Step 1:

* SAP Connectivity Service establishes a secure communication channel for application requests between SAP Build Work Zone (in BTP) and the backend system.

* It handles HTTPS-based communication protocols like OData for accessing the backend system's APIs.

* Cloud Connector for Step 2:

* SAP Cloud Connector ensures secure communication between the SAP BTP subaccount and the on-premise SAP S/4HANA system.

* It creates a secure tunnel for data exchange, allowing Work Zone or other BTP services to access on-premise resources without exposing them directly to the internet.

This combination is the most suitable for maintaining secure and efficient connectivity while aligning with SAP-recommended best practices for hybrid integrations.

* SAP Connectivity Service

NEW QUESTION # 35

Which of the following are process steps in serving up a model in SAP AI Core? Note: There are 2 correct answers to this question.

- A. Create an AI Launchpad instance
- B. Prepare the data
- C. Register the Input Dataset
- D. Make an inference

Answer: A,D

Explanation:

When serving up a model in SAP AI Core, the process includes the following key steps:

- * Create an AI Launchpad Instance (B):
- * AI Launchpad serves as the interface to manage and deploy machine learning models in SAP AI Core.
- * It is a required step to orchestrate and monitor AI model serving.
- * Make an Inference (C):
- * Once the model is deployed, making inferences involves providing input data and receiving predictions or results from the deployed model.
- * Other Options:
- * A (Prepare the Data): This is a prerequisite task for model training but not directly part of serving a deployed model.
- * D (Register the Input Dataset): Relevant during the training phase but not a step in serving the model.
