Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Network Security Fundamentals: This section of the exam measures skills of network security engineers and covers key concepts such as application layer inspection for Strata and SASE products, differentiating between slow and fast path packet inspection, and the use of decryption methods including SSL Forward Proxy, SSL Inbound Inspection, SSH Proxy, and scenarios where no decryption is applied. It also includes applying network hardening techniques like Content-ID, Zero Trust principles, User-ID (including Cloud Identity Engine), Device-ID, and network zoning to enhance security on Strata and SASE platforms.
Topic 2	<ul style="list-style-type: none"> Connectivity and Security: This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.
Topic 3	<ul style="list-style-type: none"> Platform Solutions, Services, and Tools: This section measures the expertise of security engineers and platform administrators in Palo Alto Networks NGFW and Prisma SASE products. It involves creating security and NAT policies, configuring Cloud-Delivered Security Services (CDSS) such as security profiles, User-ID and App-ID, decryption, and monitoring. It also covers the application of CDSS for IoT security, Enterprise Data Loss Prevention, SaaS Security, SD-WAN, GlobalProtect, Advanced WildFire, Threat Prevention, URL Filtering, and DNS security. Furthermore, it includes aligning AIOps with best practices through administration, dashboards, and Best Practice Assessments.

Palo Alto Networks Network Security Professional Sample Questions (Q21-Q26):

NEW QUESTION # 21

Which procedure is most effective for maintaining continuity and security during a Prisma Access data plane software upgrade?

- A. Disable all security features during the upgrade to prevent conflicts and re-enable them after completion to ensure a smooth rollout process.
- B. Use Strata Cloud Manager (SCM) to perform dynamic upgrades automatically and simultaneously across all locations at once to ensure network-wide uniformity.
- C. Perform the upgrade during peak business hours, quickly address any user-reported issues, and ensure immediate troubleshooting post-rollout.
- **D. Back up configurations, schedule upgrades during off-peak hours, and use a phased approach rather than attempting a network-wide rollout.**

Answer: D

Explanation:

The best practice for Prisma Access data plane upgrades involves backing up configurations, scheduling upgrades during off-peak hours, and using a phased approach to minimize disruption and maintain continuity. As per the Palo Alto Networks documentation: "To minimize disruptions, it is recommended to perform Prisma Access upgrades during non-business hours and in a phased manner, starting with less critical sites to validate the process before moving to critical locations. Backup configurations and validate the system's readiness to avoid data loss and maintain service continuity." (Source: Prisma Access Best Practices)

NEW QUESTION # 22

An administrator wants to implement additional Cloud-Delivered Security Services (CDSS) on a data center NGFW that already has one enabled. What benefit does the NGFW's single-pass parallel processing (SP3) architecture provide?

- **A. There will be only a minor reduction in performance.**
- B. It allows additional security inspection devices to be added inline.
- C. There will be no additional performance degradation.
- D. It allows for traffic inspection at the application level.

Answer: A

Explanation:

The SP3 architecture of Palo Alto NGFWs ensures that additional security services (CDSS) only cause a minor reduction in performance, as traffic is inspected once in a single pass.

"The single-pass parallel processing (SP3) architecture performs application identification and security enforcement simultaneously in one pass, resulting in only minor performance impacts when enabling multiple security services." (Source: SP3 Architecture) Unlike traditional multi-pass engines, SP3 architecture optimizes performance while delivering comprehensive security.

NEW QUESTION # 23

Which method in the WildFire analysis report detonates unknown submissions to provide visibility into real-world effects and behavior?

- A. Intelligent Run-time Memory Analysis
- **B. Dynamic analysis**

- C. Static analysis
- D. Machine learning (ML)

Answer: B

Explanation:

Dynamic analysis in WildFire refers to executing unknown files in a controlled environment (sandbox) to observe their real-world behavior. This allows the firewall to detect zero-day threats and advanced malware by directly analyzing the file's impact on a system.

"WildFire dynamic analysis detonates unknown files in a secure sandbox environment, analyzing real-world effects, behaviors, and potential malicious activity." (Source: WildFire Analysis)

NEW QUESTION # 24

What is the recommended upgrade path from PAN-OS 9.1 to PAN-OS 11.2?

- A. 9.1 # 11.
- **B. 9.1 # 10.0 # 11.2**
- C. 9.1 # 11.0 # 11.2
- D. 9.1 # 10.0 # 11.

Answer: B

Explanation:

Palo Alto Networks requires upgrading to the next major feature release before moving to newer releases.

This ensures stability and compatibility.

"When upgrading across multiple major PAN-OS releases, you must upgrade to each intermediate major feature release. Skipping major releases is not supported." (Source: Upgrade Considerations) For PAN-OS 9.1 # 11.2, the proper path is:

9.1 # 10.0 # 11.2

NEW QUESTION # 25

A network engineer pushes specific Panorama reports of new AI URL category types to branch NGFWs. Which two report types achieve this goal? (Choose two.)

- **A. Custom**
- B. CSV export
- **C. PDF summary**
- D. SNMP

Answer: A,C

Explanation:

Panorama allows engineers to create custom reports and generate PDF summary formats for consistent reporting across NGFWs.

Custom Reports

"Custom Reports provide tailored reporting based on URL categories, application usage, and threat visibility.

They are generated within Panorama and can include data on newly categorized AI URL types." (Source: Panorama Reports) PDF Summaries

"You can generate PDF summary reports to distribute these insights across branch firewalls, providing an easy-to-read format for compliance and operational review." (Source: Export Reports as PDF) Together, these options provide a consistent, standardized method to push insights about AI-based URL categories to branch devices.

NEW QUESTION # 26
