The PrepAwayTest team is updating the Google Professional-Cloud-DevOps-Engineer study material according to the changes in the syllabus on daily basis. The users will receive Professional-Cloud-DevOps-Engineer updates for 365 days so they can prepare according to the updated content. The 24/7 support system has been made for customers to solve their problems and serve them in the best possible ways in order to pass the Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) certification exam on the first try!

Three versions are available for Professional-Cloud-DevOps-Engineer study materials, so that you can get the version you want according to your own needs. Professional-Cloud-DevOps-Engineer PDF version is printable, and you can study anytime and anywhere. Professional-Cloud-DevOps-Engineer Online test engine is convenient and easy to learn, it supports all web browsers, and you can use in your phone, Android and IOS both ok. One of outstanding features of Professional-Cloud-DevOps-Engineer Online soft test engine is that it has testing history and performance review, and you can have a general review of what you have learned before next training. Professional-Cloud-DevOps-Engineer Soft test engine can be used in more than 200 computers, and you use this version in your computer, and it supports MS operating system.

Latest Professional-Cloud-DevOps-Engineer Test Questions - Professional-Cloud-DevOps-Engineer Valid Test Topics

In the past ten years, our company has never stopped improving the Professional-Cloud-DevOps-Engineer study materials. For a long time, we have invested much money to perfect our products. The job with high pay requires they boost excellent working abilities and profound major knowledge. Passing the Professional-Cloud-DevOps-Engineer exam can help you find the job you dream about, and we will provide the best Professional-Cloud-DevOps-Engineer question torrent to the client. We are aimed that candidates can pass the exam easily. The study materials what we provide is to boost pass rate and hit rate, you only need little time to prepare and review, and then you can pass the Professional-Cloud-DevOps-Engineer exam.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q83-Q88):

NEW QUESTION # 83

You are reviewing your deployment pipeline in Google Cloud Deploy. You must reduce toil in the pipeline and you want to minimize the amount of time it takes to complete an end-to-end deployment. What should you do?

Choose 2 answers

- A. Create a trigger to notify the required team to complete the next step when manual intervention is required

- **B. Automate promotion approvals from the development environment to the test environment**
- C. Add more engineers to finish the manual steps.
- D. Use a script to automate the creation of the deployment pipeline in Google Cloud Deploy
- E. Divide the automation steps into smaller tasks

Answer: A,B

NEW QUESTION # 84

Your team is designing a new application for deployment into Google Kubernetes Engine (GKE). You need to set up monitoring to collect and aggregate various application-level metrics in a centralized location. You want to use Google Cloud Platform services while minimizing the amount of work required to set up monitoring. What should you do?

- A. Emit all metrics in the form of application-specific log messages, pass these messages from the containers to the Stackdriver logging collector, and then observe metrics in Stackdriver.
- B. Install the OpenTelemetry client libraries in the application, configure Stackdriver as the export destination for the metrics, and then observe the application's metrics in Stackdriver.
- C. Install the Cloud Pub/Sub client libraries, push various metrics from the application to various topics, and then observe the aggregated metrics in Stackdriver.
- **D. Publish various metrics from the application directly to the Stackdriver Monitoring API, and then observe these custom metrics in Stackdriver.**

Answer: D

Explanation:

https://cloud.google.com/kubernetes-engine/docs/concepts/custom-and-external-metrics#custom_metrics

<https://github.com/GoogleCloudPlatform/k8s-stackdriver/blob/master/custom-metrics-stackdriver-adapter/README.md>

Your application can report a custom metric to Cloud Monitoring. You can configure Kubernetes to respond to these metrics and scale your workload automatically. For example, you can scale your application based on metrics such as queries per second, writes per second, network performance, latency when communicating with a different application, or other metrics that make sense for your workload. <https://cloud.google.com/kubernetes-engine/docs/concepts/custom-and-external-metrics>

NEW QUESTION # 85

You are configuring the frontend tier of an application deployed in Google Cloud. The frontend tier is hosted in nginx and deployed using a managed instance group with an Envoy-based external HTTP(S) load balancer in front. The application is deployed entirely within the europe-west2 region and only serves users based in the United Kingdom. You need to choose the most cost-effective network tier and load balancing configuration. What should you use?

- A. Standard Tier with a regional load balancer
- B. Premium Tier with a global load balancer
- **C. Premium Tier with a regional load balancer**
- D. Standard Tier with a global load balancer

Answer: C

Explanation:

The most cost-effective network tier and load balancing configuration for your frontend tier is to use Premium Tier with a regional load balancer. Premium Tier is a network tier that provides high-performance and low-latency network connectivity across Google's global network. A regional load balancer is a load balancer that distributes traffic within a single region. Since your application is deployed entirely within the europe-west2 region and only serves users based in the United Kingdom, you can use Premium Tier with a regional load balancer to optimize the network performance and cost.

NEW QUESTION # 86

You are developing a strategy for monitoring your Google Cloud Platform (GCP) projects in production using Stackdriver Workspaces. One of the requirements is to be able to quickly identify and react to production environment issues without false alerts from development and staging projects. You want to ensure that you adhere to the principle of least privilege when providing

relevant team members with access to Stackdriver Workspaces. What should you do?

- **A. Grant relevant team members read access to all GCP production projects. Create Stackdriver workspaces inside each project.**
- B. Choose an existing GCP production project to host the monitoring workspace. Attach the production projects to this workspace. Grant relevant team members read access to the Stackdriver Workspace.
- C. Grant relevant team members the Project Viewer IAM role on all GCP production projects. Create Stackdriver workspaces inside each project.
- D. Create a new GCP monitoring project, and create a Stackdriver Workspace inside it. Attach the production projects to this workspace. Grant relevant team members read access to the Stackdriver Workspace.

Answer: A

NEW QUESTION # 87

You are part of an organization that follows SRE practices and principles. You are taking over the management of a new service from the Development Team, and you conduct a Production Readiness Review (PRR). After the PRR analysis phase, you determine that the service cannot currently meet its Service Level Objectives (SLOs). You want to ensure that the service can meet its SLOs in production. What should you do next?

- A. Identify recommended reliability improvements to the service to be completed before handover.
- B. Bring the service into production with no SLOs and build them when you have collected operational data.
- **C. Notify the development team that they will have to provide production support for the service.**
- D. Adjust the SLO targets to be achievable by the service so you can bring it into production.

Answer: C

NEW QUESTION # 88

.....

Our Professional-Cloud-DevOps-Engineer prep torrent boosts the highest standards of technical accuracy and only use certificated subject matter and experts. We provide the latest and accurate Professional-Cloud-DevOps-Engineer exam torrent to the client and the questions and the answers we provide are based on the real exam. We can promise to you the passing rate is high and about 98%-100%. Our Professional-Cloud-DevOps-Engineer Test Braindumps also boosts high hit rate and can stimulate the exam to let you have a good preparation for the Professional-Cloud-DevOps-Engineer exam. Your success is bound with our Professional-Cloud-DevOps-Engineer exam questions.
