All the given practice questions in the desktop software are identical to the RUCKUS Certified Networking Implementer (RCNI) actual test. Windows computers support the desktop practice test software. ActualPDF has a complete support team to fix issues of RUCKUS RCNI PDF QUESTIONS software users. ActualPDF practice tests (desktop and web-based) produce score report at the end of each attempt. So, that users get awareness of their RUCKUS Certified Networking Implementer (RCNI) preparation status and remove their mistakes.

RUCKUS RCNI Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Foundational Networking Concepts: This section of the exam measures the skills of RUCKUS ICX Network Administrators and covers essential networking concepts. It includes VLAN design and configuration, STP and loop prevention protocols, PoE requirements, basic LAN concepts, Layer 3 routing configurations, and basic QoS concepts. Candidates should be able to demonstrate proficiency in designing VLANs for network segmentation.
Topic 2	<ul style="list-style-type: none">• ICX Solution Troubleshooting: RUCKUS ICX networking Engineers are expected to demonstrate troubleshooting skills in this section. It covers basic networking troubleshooting techniques and procedures for performing ICX switch recovery. Candidates should be able to identify and resolve common network issues in ICX environments.
Topic 3	<ul style="list-style-type: none">• ICX Solution Implementation: This significant portion of the exam assesses the skills of RUCKUS ICX Network Administrators in implementing ICX solutions. It covers ICX software management, stacking capabilities, PoE configuration, Layer 2• 3 protocols, and ICX services, IPv4• IPv6 addressing on switch interfaces, ICX switch management methods, and configuring multicast and security features. Candidates should be able to demonstrate proficiency in configuring stacking for scalable network deployments.
Topic 4	<ul style="list-style-type: none">• RUCKUS Products & Solutions: RUCKUS ICX networking Engineers are expected to showcase their knowledge of RUCKUS products and solutions in this section. It focuses primarily on the ICX product line, covering various switch models and their capabilities. Candidates should be familiar with the features, specifications, and use cases of different ICX switches.

RUCKUS Certified Networking Implementer Sample Questions (Q11-Q16):

NEW QUESTION # 11

What is the maximum number of software images that can be stored simultaneously on an ICX switch?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

RUCKUS ICX switches are designed to store multiple software images simultaneously, allowing network administrators to manage firmware versions effectively. The maximum number of software images that can be stored on an ICX switch is three.

Image Storage Structure:

* Primary Image:

* The main firmware image that the switch loads during the boot process.

* Secondary Image:

* An alternative firmware image that can be used for redundancy or testing purposes.

* Tertiary (or Additional) Image:

* A third firmware image slot available for further flexibility in image management.

Managing Software Images:

* Viewing Stored Images:

* To display the software images stored on the switch, use the following command:

```
sql
```

Copy code

```
show flash
```

* This command lists all firmware images present in the switch's flash memory.

* Setting Boot Preferences:

* To specify which image the switch should load on the next reboot, use:

sql

Copy code

boot system flash primary

* Replace primary with secondary or tertiary as needed.

* Upgrading Firmware:

* When upgrading the switch firmware, you can upload the new image to any of the available slots (primary, secondary, or tertiary) without overwriting existing images, providing a fallback option if needed.

Best Practices:

* Maintain Multiple Images:

* Keeping multiple firmware images allows for quick recovery in case of issues with the current running image.

* Regular Updates:

* Ensure that the stored images are up-to-date to maintain security and feature enhancements.

* Consistent Configuration:

* After uploading a new image, verify that the switch configuration is compatible with the firmware version to prevent potential issues.

NEW QUESTION # 12

When using zero-touch stacking, which two prerequisites must be in place to ensure all devices join the stack?
(Choose two.)

- A. configure each unit's management IP, VLANs, and tagging
- B. enable stacking on the active controller
- C. ensure units have clean configurations
- D. issue stack disable on intended member devices
- E. enable stacking on all devices

Answer: C,E

Explanation:

Zero-touch stacking simplifies the process of forming a stack by automating the configuration. To ensure all devices join the stack seamlessly, the following prerequisites must be met:

* Enable Stacking on All Devices:

* Access each switch's CLI.

* Enter global configuration mode: configure terminal.

* Enable stacking by executing: stack enable.

* Save the configuration with: write memory.

* Ensure Units Have Clean Configurations:

* It's crucial that switches have default configurations to prevent conflicts during the stacking process.

* To reset a switch to its default settings:

* Enter global configuration mode: configure terminal.

* Execute the command: write erase.

* Reload the switch to apply the default configuration: reload.

* Additional Considerations:

* Ensure all switches are running compatible firmware versions to prevent software mismatches.

* Verify that stacking cables are correctly connected to facilitate proper communication between units.

NEW QUESTION # 13

A Core, Aggregation, Edge topology network is running Rapid Spanning Tree Protocol (RSTP). Two switches at the edge are legacy and run 802.1D.

To influence the convergence time of the legacy switches at the edge, where are the timers modified?

- A. on the root bridge at the core
- B. the route-only port on the upstream gateway
- C. on the two legacy 802.1D switches at the edge

- D. on the Aggregation switches connected to the legacy edge switches

Answer: D

NEW QUESTION # 14

If a customer needs to implement VRRP-E on their ICX7550 units, which license needs to be applied to enable this feature?

- A. L3-prem
- B. MACSec
- C. PoD
- D. L3-Base

Answer: D

NEW QUESTION # 15

For multicast clients to stop receiving traffic using a leave request, which protocol must run on the local subnet?

- A. IGMPv2
- B. IGMPv1
- C. PIM Dense
- D. IGMP Snooping

Answer: B
