New ACP-120 Test Braindumps & ACP-120 Latest Mock Exam

Did you often feel helpless and confused during the preparation of the exam? Do you want to find an expert to help but feel bad about the expensive tutoring costs? Don't worry. ACP-120 learning materials can help you to solve all the problems. ACP-120 learning material always regards helping students to pass the exam as it is own mission. With ACP-120 learning materials, you only need to pay half the money to get the help of the most authoritative experts.

ATLASSIAN ACP-120 certification exam is an important certification for Jira Cloud administrators who want to demonstrate their expertise and advance their careers. ACP-120 exam covers a range of topics related to Jira Cloud administration and is recognized by many companies around the world. Individuals who pass the exam will receive a digital badge and a certificate from ATLASSIAN, which can be used to showcase their skills and knowledge in Jira Cloud administration.

To take the ACP-120 exam, candidates should have a minimum of six months of experience in administering Jira Cloud. They should also possess a solid understanding of Jira Cloud's features, such as project and issue management, workflows, and customizations. ACP-120 Exam includes 60 multiple-choice questions that must be completed within 2 hours. Candidates who successfully pass the exam will receive an ACP-120 certification, which is valid for two years.

ATLASSIAN ACP-120 (Jira Cloud Administrator) Certification Exam is an important qualification for professionals who are responsible for administering Jira Cloud instances. It tests the candidate's understanding of Jira Cloud concepts and their ability to apply that knowledge to real-world situations. Successful candidates are awarded a globally recognized certification that demonstrates their competence in managing and configuring Jira Cloud instances.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q52-Q57):

NEW QUESTION # 52

Your organization has a Jira project for managing work on a software development project.

As the team has grown, two groups have formed within it, working on different tasks. To help bring more focus to the work being conducted, the team has requested a second Jira project to split the team's work into two.

Which set of schemes can likely be shared between the two projects?

- A. Custom Field and Issue Security
- B. Notification and Workflow
- C. Issue Type and Sub-task
- **D. Workflow and Custom Field**
- E. Resolution and Notification

Answer: D

NEW QUESTION # 53

You are prompted to perform a re-index after you have made configuration changes to a very large Jira instance.

Which reason would justify re-indexing only a project instead of a full re-index of the instance?

- **A. Only custom fields used by the project were modified.**
- B. Workflow changes were limited to the project's unique workflow.
- C. Only project users would be affected by the re-index.
- D. Time tracking was modified for the project.

Answer: A

Explanation:

NEW QUESTION # 54

Your management team needs to see a list of only those issues that were resolved in the previous week, from Sunday to Saturday.

The list needs to be sent to them each week on Tuesdays. You plan to create a saved filter and filter subscription to do this.

Which JQL query will return the correct results?

- **A. resolved >= startOfWeek(-1) AND resolved < startOfWeek()**
- B. resolved >= startOfDay(-7) AND resolved < startOfDay()
- C. resolved endOfWeek(1)
- D. status changed TO RESOLVED BEFORE startOfWeek()

Answer: A

NEW QUESTION # 55

Peter is building a workflow in his team-managed project. He can add several rules to his workflow except for one rule. Identify that rule.

- **A. Rule to reopen Sub-tasks when reopening Stories.**
- B. Rule to clear the Description when reopening.
- C. Rule to ensure only the Reporter can close bugs.
- D. Rule to clear the Assignee when closing.
- E. Rule to ensure only Peter can approve Stories.

Answer: A

Explanation:

In team-managed projects, workflows are simplified and configured within Project settings > Workflow.

Users (typically project admins) can add rules to transitions, such as clearing fields, restricting transitions, or setting field values.

However, team-managed workflows do not support complex automation-like rules, such as automatically reopening Sub-tasks when a Story is reopened, as this requires interacting with related issues (Sub-tasks), which is not supported out-of-box in team-managed workflow rules.

* Explanation of the Correct Answer (Option B):

* The rule to reopen Sub-tasks when reopening Stories requires a workflow rule to detect the transition of a Story to an open status and then automatically transition its Sub-tasks to an open status. Team-managed workflows do not support rules that affect related issues (e.g., Sub-tasks) during a transition. This functionality requires Jira automation or a company-managed project workflow with custom post functions, which are not available in team-managed projects.

* Exact Extract from Documentation:

Configure workflows in team-managed projects

Team-managed projects use simplified workflows that allow adding rules to transitions, such as:

* Restricting transitions to specific users or roles.

* Setting or clearing field values (e.g., Assignee, Description).

* Requiring fields to be filled. Rules are limited to the issue being transitioned and cannot affect related issues (e.g., Sub-tasks, Epics).

To automate actions on related issues, use Jira automation rules. Note: Team-managed workflows are project-specific and edited in Project settings > Workflow. (Source: Atlassian Support Documentation, "Configure workflows in team-managed projects")

* Why This Fits: The rule to reopen Sub-tasks requires interacting with related issues (Sub-tasks), which is beyond the capabilities of team-managed workflow rules, making Option B the correct answer.

* Why Other Options Are Incorrect:

* Rule to clear the Assignee when closing (Option A):

* Team-managed workflows support rules to clear fields during a transition. A rule can be added to the transition to the Closed status to clear the Assignee field.

* Extract from Documentation:

You can add a rule to a transition to clear a field, such as Assignee, when moving to a status like Closed.

(Source: Atlassian Support Documentation, "Configure workflows in team-managed projects")

* Rule to ensure only Peter can approve Stories (Option C):

* Team-managed workflows allow restricting transitions to specific users or roles. A rule can be added to the transition to an Approved status to allow only Peter to perform it.

* Extract from Documentation:

Add a rule to restrict a transition to a specific user (e.g., Peter) or role, ensuring only they can move issues to a status like Approved. (Source: Atlassian Support Documentation, "Configure workflows in team-managed projects")

* Rule to clear the Description when reopening (Option D):

* Team-managed workflows support clearing fields during transitions. A rule can be added to the transition to an Open status to clear the Description field.

* Extract from Documentation:

Rules can clear fields like Description during a transition, such as when reopening an issue.

(Source: Atlassian Support Documentation, "Configure workflows in team-managed projects")

* Rule to ensure only the Reporter can close bugs (Option E):

* Team-managed workflows allow restricting transitions to specific users, including the Reporter. A rule can be added to the transition to the Closed status for bugs to allow only the Reporter to perform it.

* Extract from Documentation:

Restrict a transition to the Reporter to ensure only they can move issues to a status like Closed.

(Source: Atlassian Support Documentation, "Configure workflows in team-managed projects")

* Additional Notes:

* Team-managed workflows are designed for simplicity, with rules limited to the issue being transitioned. Complex logic, such as affecting Sub-tasks (Option B), requires Jira automation rules, which are separate from workflow rules.

* Peter, as a project admin in a team-managed project, can edit the workflow in Project settings > Workflow.

NEW QUESTION # 56

Your marketing group is using Jira to track media print advertisements. They would like to track TV and radio commercials as well. The same team handles all three formats, but each format requires a unique workflow. The team would like to keep everything on the same dashboard, and they will also be using the same permissions, notifications and screens.

Without using third-party apps, how should you configure Jira to meet these requirements?

- A. Use issue types of Print, Radio and TV in the existing project.
- B. Add TV and Radio into the existing project as components.
- C. Clone the existing project and key for TV and Radio.
- D. Create a sub-component hierarchy.
- E. Copy the existing permissions and notification schemes, and associate them with new projects for TV and Radio.

- F. Create two new projects for TV and Radio.

Answer: F

NEW QUESTION # 57

.....

For all of you, it is necessary to get the ATlassian certification to enhance your career path. TestPassed is the leading provider of its practice exams, study guides and online learning courses, which may can help you. For example, the ACP-120 practice dumps contain the comprehensive contents which relevant to the actual test, with which you can pass your ACP-120 Actual Test with high score. Besides, you can print the ACP-120 study torrent into papers, which can give a best way to remember the questions. We guarantee full refund for any reason in case of your failure of ACP-120 test.
