

Valid Salesforce-MuleSoft-Developer-I Exam Fee, Practice Salesforce-MuleSoft-Developer-I Exams Free

2025 Latest RealVCE Salesforce-MuleSoft-Developer-I PDF Dumps and Salesforce-MuleSoft-Developer-I Exam Engine Free Share: https://drive.google.com/open?id=19UiJ_TcYpWvo_zQINkyMJSmlVNITHBgJ

Our website is considered to be the most professional platform offering Salesforce-MuleSoft-Developer-I practice materials, and gives you the best knowledge of the Salesforce-MuleSoft-Developer-I practice materials. Passing the exam has never been so efficient or easy when getting help from our Salesforce Certified MuleSoft Developer (Mule-Dev-201) practice materials. There are also free demos you can download before placing the orders. Taking full advantage of our Salesforce Certified MuleSoft Developer (Mule-Dev-201) practice materials and getting to know more about them means higher possibility of winning. And our website is a bountiful treasure you cannot miss.

Salesforce Salesforce-MuleSoft-Developer-I Exam Syllabus Topics:

Topic	Details
Topic 1	Deploying and Managing APIs and Integrations: It includes packaging Mule applications for deployment and deploying them to CloudHub. This topic also involves using CloudHub properties, creating and deploying API proxies, connecting an API implementation to API Manager, and applying policies to secure an API.
Topic 2	Transforming Data with DataWeave: It involves writing DataWeave scripts and using DataWeave functions. This topic also includes defining and using DataWeave variables, functions, and modules, and applying correct syntax.
Topic 3	Accessing and Modifying Mule Events: It describes the Mule event data structure. Moreover, the topic focuses on usage of transformers and enriching Mule events.
Topic 4	Debugging and Troubleshooting Mule Applications: Using breakpoints to inspect a Mule event during runtime, installing missing Maven dependencies, and reading and deciphering Mule log error messages are sub-topics of this topic.
Topic 5	Handling Errors: Handling errors includes describing default error handling in Mule applications and defining custom global default error handlers. It involves comparing On Error Continue and On Error Propagate scopes, creating error handlers for a flow, using the Try scope, and mapping errors to custom application errors.
Topic 6	Processing Records: Processing records includes methods for processing individual records in a collection and explaining how Mule events are processed by the For Each scope. It also involves using the Batch Job with Batch Steps and a Batch Aggregator.

Salesforce-MuleSoft-Developer-I latest Salesforce certification exam questions and answers published

Once you decide to pass the Salesforce-MuleSoft-Developer-I exam and get the certification, you may encounter many handicaps that you don't know how to deal with, so, you may think that it is difficult to pass the Salesforce-MuleSoft-Developer-I exam and get the certification. In order to help you solve these problem and help you pass the exam easy, we compiled such a Salesforce-MuleSoft-Developer-I Exam Torrent. We can promise that you will have no regret buying our Salesforce-MuleSoft-Developer-I exam dumps. Our Salesforce-MuleSoft-Developer-I exam questions have a high pass rate as 99% to 100%, you will pass with it for sure.

Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q187-Q192):

NEW QUESTION # 187

Refer to the exhibits.

A Mule application is being developed to process web client POST requests with payloads containing order information including the user name and purchased items. The Shipping connector returns a shipping address for the input payload's user name. The Shipping connector's Shipping Address operation is configured with a target named shippingAddress.

The Set Payload transformer needs to set an item key equal to the items value from the original received payload and a shippingInfo key equal to the ShippingAddress operation's response. What is a straightforward way to properly configure the Set Payload transformer with the required data?

- A.

```

{
  items: vars.shippingAddress.items
  shippingInfo: payload
}

```
- B.

```

{
  items: payload.items
  shippingInfo: vars.shippingAddress
}

```

• C.

```
{
  items: attributes.shippingAddress.items
  shippingInfo: payload
}
```

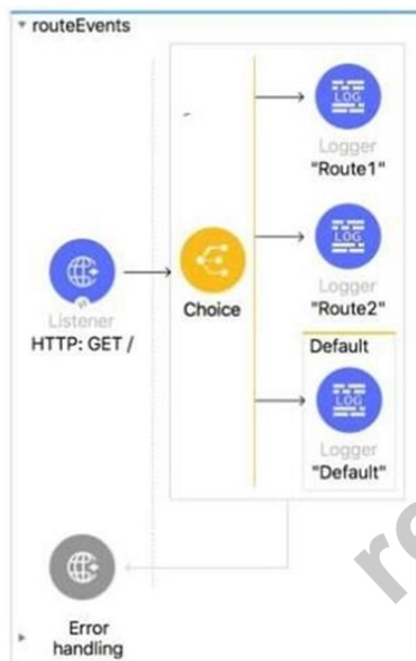

• D.

```
{
  items: payload.items,
  shippingInfo: shippingAddress
}
```

Answer: B

NEW QUESTION # 188

Refer to the exhibits.

```
<flow name="routeEvents" >
  <http:listener doc:name="HTTP: GET /" config-ref="HTTP_Listener_config"
    path="/" />
  <choice doc:name="Choice" >
    <when expression="true" >
      <logger level="INFO" doc:name="Route1" message="Route1"/>
    </when>
    <when expression="true" >
      <logger level="INFO" doc:name="Route2" message="Route2"/>
    </when>
    <otherwise >
      <logger level="INFO" doc:name="Default" message="Default"/>
    </otherwise>
  </choice>
</flow>
```

All three of the conditions for the Choice router are true. What messages are written in the application log?

- A. Route1,Route2
- B. Route2
- C. Route1,Route2,Default
- **D. Route1**

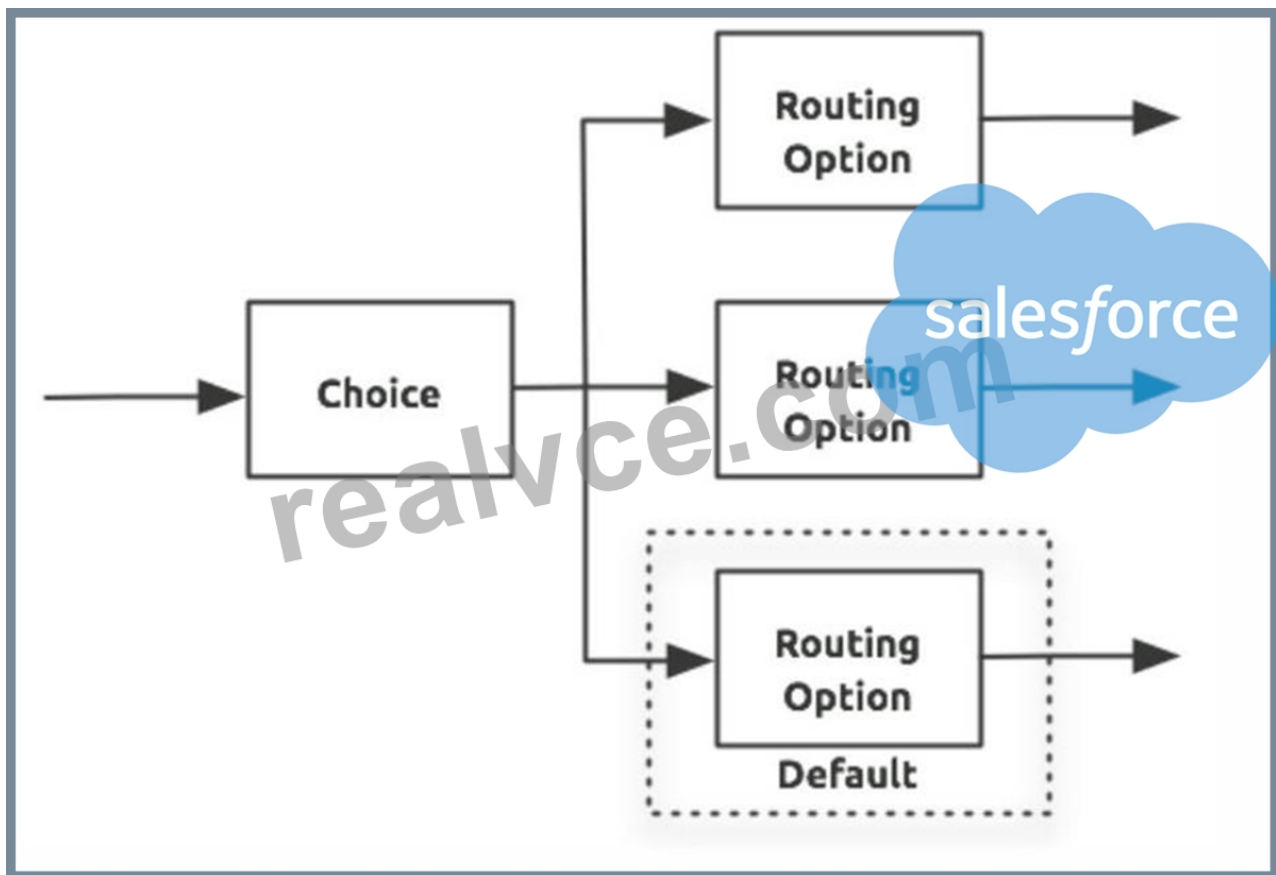

Answer: D

Explanation:

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route1 execution and the others are not checked. If none of the expressions are true, then the default route executes. Hence only Route1 will be executed as it is the first expression. hence output of logger is Route1.

MuleSoft Doc Ref : <https://docs.mulesoft.com/mule-runtime/4.3/choice-router-concept> The Choice router dynamically routes messages through a flow according to a set of DataWeave expressions that evaluate message content. Each expression is associated with a different routing option. The effect is to add conditional processing to a flow, similar to an if/then/else code block in most programming languages.

Only one of the routes in the Choice router executes, meaning that the first expression that evaluates to true triggers that route's execution and the others are not checked. If none of the expressions are true, then the default route executes.

NEW QUESTION # 189

What path setting is required for an HTTP Listener endpoint to route all requests to an APIkit router?

- A. "/*"
- B. /(*)
- C. /(0)
- D. /

Answer: A

Explanation:

Option1 is correct syntax to configure HTTP Listener endpoint

NEW QUESTION # 190

An organization is beginning to follow Mulesoft's recommended API led connectivity approach to use modern API to support the development and lifecycle of the integration solutions and to close the IT delivery gap.

What distinguishes between how modern API's are organized in a MuleSoft recommended API-led connectivity approach as compared to other common enterprise integration solutions?

- A. The API interfaces are specified at a granularity intended for developers to consume specific aspect of integration processes
- B. The API implementation are built with standards using common lifecycle and centralized configuration management tools
- C. The API implementations are monitored with common tools, centralized monitoring and security systems
- D. The API interfaces are specified as macroservices with one API representing all the business logic of an existing and proven end to end solution

Answer: A

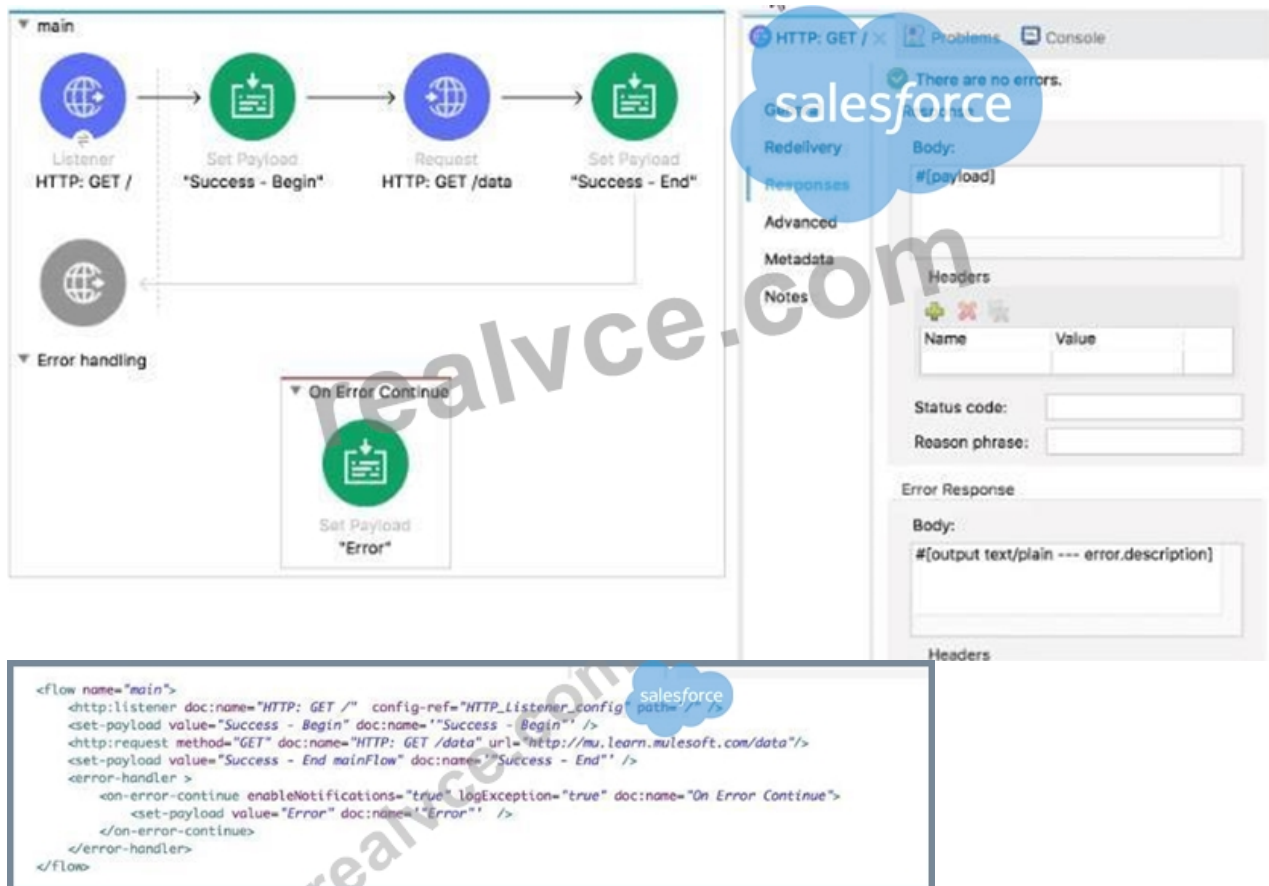

Explanation:

Correct answer is The API interfaces are specified at a granularity intended for developers to consume specific aspect of integration

processes

NEW QUESTION # 191

Refer to the exhibits.

A web client submits a request to the HTTP Listener and the HTTP Request throws an error.

What payload and status code are returned to the web client?

Refer to the exhibits. A web client submits a request to the HTTP Listener and the HTTP Request throws an error.

What payload and status code are returned to the web client?

- A. Error response body: error, description Default error response status code: 500
- **B. Response body: "Error" Default response status code: 200**
- C. Response body: "Success - End" Default response status code: 200
- D. Response body: "Success - Begin" Default response status code: 200

Answer: B

Explanation:

Response body: "Error" Default response status code: 200.

1) Payload is successfully set to "Success - Started Flow"

2) When HTTP Request throws an error, execution halts

#[error.description] = "ABC"

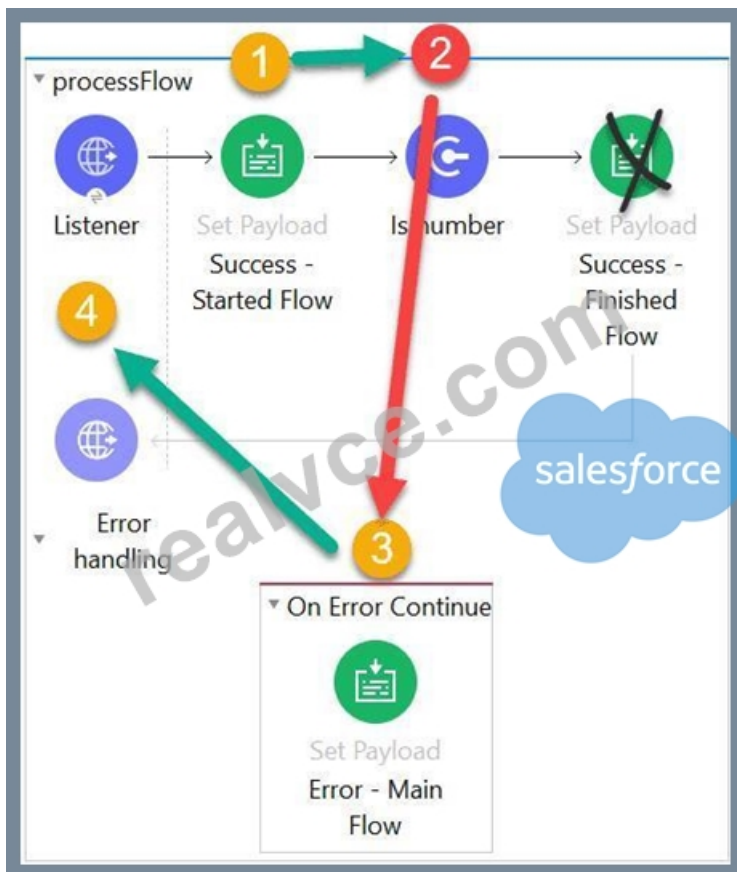

#[error.errorType] = "XYZ"

3) The On Error Continue scope handles the error. When On Error Continue scope is invoked, all the processors in error block are executed and success response is sent back to the client with payload which is set in error flow. In this case payload is set to "Error" value in error block.

4) "Error" is returned to the requestor in the body of the HTTP request with HTTP Status Code: 200 as On error continue always sends success error code.

NEW QUESTION # 192

.....

It is not easy for you to make a decision of choosing the Salesforce-MuleSoft-Developer-I prep guide from our company, because there are a lot of study materials about the exam in the market. However, if you decide to buy the Salesforce-MuleSoft-Developer-I test practice files from our company, we are going to tell you that it will be one of the best decisions you have made in recent years. As is known to us, the Salesforce-MuleSoft-Developer-I study braindumps from our company are designed by a lot of famous experts and professors in the field. There is no doubt that the Salesforce-MuleSoft-Developer-I prep guide has the high quality beyond your imagination. Choosing the Salesforce-MuleSoft-Developer-I study braindumps from our company can but prove beneficial to all people. We believe that our products, at all events, worth a trial.
