

# Valid SAP C\_ABAPD\_2309 Study Guide - C\_ABAPD\_2309 Reliable Test Braindumps

What's more, part of that Test4Engine C\_ABAPD\_2309 dumps now are free: [https://drive.google.com/open?id=18AC\\_7cPMPIRsbzSxg9CX0KEQ2wCsVGt8](https://drive.google.com/open?id=18AC_7cPMPIRsbzSxg9CX0KEQ2wCsVGt8)

Gone are the days when C\_ABAPD\_2309 hadn't their place in the corporate world. With the ever-increasing popularity of the C\_ABAPD\_2309 devices and software, now C\_ABAPD\_2309 certified professionals are the utmost need of the industry, round the globe. Particularly, advertisement agencies and the media houses have enough room for C\_ABAPD\_2309 Certified. C\_ABAPD\_2309 dumps promises you to bag your dream C\_ABAPD\_2309 certification employing minimum effort and getting the best results you have ever imagined.

## SAP C\_ABAPD\_2309 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>ABAP RESTful Application Programming Model: This topic explains the ABAP Restful Application Programming model, ABAP development, and the architecture of the ABAP Restful Application Programming model.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Object-oriented design: It measures your knowledge about encapsulation, upcast, inheritance, polymorphism, and interfaces. Moreover, the topic evaluates your knowledge about constructor calls, Exception classes, and singleton pattern.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>SAP clean core extensibility and ABAP cloud: The topic explains extension pattern, extension rules, ABAP cloud development, and ABAP cloud rules.</li></ul>

## C\_ABAPD\_2309 Reliable Test Braindumps & Examcollection C\_ABAPD\_2309 Questions Answers

C\_ABAPD\_2309 guide materials really attach great importance to the interests of users. In the process of development, it also constantly considers the different needs of users. According to your situation, our C\_ABAPD\_2309 study materials will tailor-make different materials for you. The C\_ABAPD\_2309 practice questions that are best for you will definitely make you feel more effective in less time. Selecting our C\_ABAPD\_2309 Study Materials is definitely your right decision. Of course, you can also make a

decision after using the trial version. With our C\_ABAPD\_2309 real exam, we look forward to your joining.

## SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q54-Q59):

### NEW QUESTION # 54

What RESTful Application Programming feature is used to ensure the uniqueness of a semantic key?

- A. Determination
- B. Action
- C. Validation

**Answer: A**

Explanation:

The RESTful Application Programming feature that is used to ensure the uniqueness of a semantic key is determination. A determination is a type of behavior implementation that defines a logic that is executed automatically when certain events occur, such as create, update, delete, or activate. A determination can be used to calculate or derive values for certain fields, such as semantic keys, based on other fields or external sources. A determination can also be used to check the uniqueness of a semantic key by comparing it with the existing values in the database or the transaction buffer. A determination can use the ABAP SQL or the EML syntax to access and manipulate data. A determination can be defined using the DETERMINE action clause in the behavior definition of a CDS view entity or a projection view. A determination can also be annotated with the @ObjectModel.determination annotation to specify the event, the timing, and the scope of the determination<sup>12</sup>. The other RESTful Application Programming features are not used to ensure the uniqueness of a semantic key, but have different purposes and effects. These features are:

\* Validation: A validation is a type of behavior implementation that defines a logic that is executed automatically when certain events occur, such as create, update, delete, or activate. A validation can be used to check the consistency and correctness of the data, such as mandatory fields, data types, value ranges, or business rules. A validation can use the ABAP SQL or the EML syntax to access and manipulate data. A validation can be defined using the VALIDATE action clause in the behavior definition of a CDS view entity or a projection view. A validation can also be annotated with the @ObjectModel.validation annotation to specify the event, the timing, and the scope of the validation<sup>12</sup>

\* Action: An action is a type of behavior implementation that defines a logic that is executed explicitly by the user or the application. An action can be used to perform a specific business operation, such as creating, updating, deleting, or activating an entity instance, or triggering a workflow or a notification.

An action can use the ABAP SQL or the EML syntax to access and manipulate data. An action can be defined using the ACTION clause in the behavior definition of a CDS view entity or a projection view. An action can also be annotated with the @ObjectModel.action annotation to specify the name, the description, the parameters, and the visibility of the action<sup>12</sup>. ### NEW QUESTION # 55

Refer to the Exhibit.

Image:

In the following ABAP SQL code, what are valid case distinctions? Note: There are 2 correct answers to this question.

- A.

```
SELECT FROM dbtab1 FIELDS F1,  
CASE  
WHEN F2 = '1' THEN "Value 1" WHEN f2 < f3 AND f2 = '2' THEN "Value 2"  
WHEN OTHERS 'Value for the rest' ENDCASE AS f_case  
INTO TABLE @gt t1.
```

- B.

```
SELECT FROM dbtab1 FIELDS F1,  
CASE  
WHEN F2 = '1' THEN 'Value 1'  
WHEN f2'2' THEN 'Value 2' ELSE "Value for the rest" END AS f_case  
INTO TABLE @et t1.
```

- C.

```
SELECT FROM dbtab1 FIELDS f1,  
CASE f2  
WHEN '1' THEN 'Value 1'  
WHEN '2' THEN 'Value 2'  
ELSE "Value for the rest" END AS f_case  
INTO TABLE @gt_t1.
```

```
SELECT FROM dbtab1 FIELDS F1,  
CASE f2,  
WHEN '1' THEN 'Value 1',  
WHEN '2' THEN 'Value 2'  
WHEN OTHERS "Value for the rest", ENDCASE AS f_case  
INTO TABLE @gt t1.
```

- D.

**Answer: B,C**

#### NEW QUESTION # 56

What is the purpose of a foreign key relationship between two tables in the ABAP Dictionary?

- A. To ensure the integrity of data in the corresponding database tables
- B. To create a corresponding foreign key relationship in the database
- C. To document the relationship between the two tables

**Answer: A**

Explanation:

The purpose of a foreign key relationship between two tables in the ABAP Dictionary is to ensure the integrity of data in the corresponding database tables. A foreign key relationship defines a logical link between a foreign key table and a check table, where the foreign key fields of the former are assigned to the primary key fields of the latter. This means that the values entered in the foreign key fields must exist in the check table, otherwise the system will reject the entry. This way, the foreign key relationship prevents the insertion of invalid or inconsistent data in the database tables.

A foreign key relationship also serves to document the relationship between the two tables in the ABAP Dictionary, but this is not its primary purpose. A foreign key relationship does not necessarily create a corresponding foreign key relationship in the database, as this depends on the database system and the settings of the ABAP Dictionary. Some database systems do not support foreign keys at all, while others require additional steps to activate them. Therefore, the foreign key relationship in the ABAP Dictionary is mainly a logical concept that is enforced by the ABAP runtime environment.

### NEW QUESTION # 57

In ABAP SQL, which of the following retrieves the association field `_Airline-Name` of a CDS view?

- A. `\_Airline-Name`
- B. `"\_Airline Name`
- C. `/\_Airline Name`
- D. `@\_Airline-Name`

**Answer: D**

Explanation:

Explanation

In ABAP SQL, the syntax to retrieve the association field of a CDS view is to use the `@` sign followed by the association name and the field name, separated by a period sign `(.)`. For example, to retrieve the association field `_Airline-Name` of a CDS view, the syntax is `@\_Airline.Name`. This syntax allows the access to the fields of the target data source of the association without explicitly joining the data sources<sup>1</sup>. The other options are incorrect because they use the wrong symbols or formats to access the association field.

### NEW QUESTION # 58

In RESTful Application Programming, a business object contains which parts? Note: There are 2 correct answers to this question.

- A. Authentication rules
- B. Process definition
- C. Behavior definition
- D. CDS view

**Answer: C,D**

Explanation:

In RESTful Application Programming, a business object contains two main parts: a CDS view and a behavior definition<sup>1</sup>.

A) CDS view: A CDS view is a data definition that defines the structure and the data source of a business object. A CDS view can consist of one or more entities that are linked by associations or compositions. An entity is a CDS view element that represents a node or a projection of a business object. An entity can have various annotations that define the metadata and the semantics of the business object<sup>2</sup>.

B) Behavior definition: A behavior definition is a source code artifact that defines the behavior and the validation rules of a business object. A behavior definition can specify the standard CRUD (create, read, update, delete) operations, the draft handling, the authorization checks, and the side effects for a business object. A behavior definition can also define custom actions, validations, and determinations that implement the business logic of a business object<sup>3</sup>.

The following are not parts of a business object in RESTful Application Programming, because:

C) Authentication rules: Authentication rules are not part of a business object, but part of a service binding. A service binding is a configuration artifact that defines how a business object is exposed as an OData service. A service binding can specify the authentication method, the authorization scope, the protocol version, and the service options for the OData service<sup>4</sup>.

D) Process definition: Process definition is not part of a business object, but part of a workflow. A workflow is a business process that orchestrates the tasks and the events of a business object. A workflow can be defined using the Workflow Editor in the SAP Business Application Studio or the SAP Web IDE. A workflow can use the business object's APIs to trigger or consume events, execute actions, or read or update data<sup>5</sup>.

### NEW QUESTION # 59

.....

As a hot test of SAP certification, C\_ABAPD\_2309 practice exam become a difficult task for most candidates. So choosing right study materials is a guarantee success. Our website will be first time to provide you the latest C\_ABAPD\_2309 Exam Braindumps and test answers to let you be fully prepared to pass C\_ABAPD\_2309 actual test with 100% guaranteed.
