SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q80-Q85):

NEW QUESTION # 80
Which of the following API types does SAP recommend to use to achieve clean core integrations? Note: There are 2 correct answers to this question.

- A. SOAP
- B. RFC
- C. Doc
- D. OData

Answer: A,D

Explanation:
SAP's clean core strategy emphasizes standardized, extensible integrations to minimize customizations and ensure upgrade stability. The recommended API types are:
* SOAP: A widely supported, robust protocol for structured data exchange, recommended for integrating SAP S/4HANA with external systems in a clean core approach.
* OData: SAP's preferred REST-based protocol for real-time, lightweight integrations, heavily utilized in SAP Fiori apps and clean core scenarios.
* Doc: Not a recognized API type in SAP's integration framework.
* RFC: While still supported, RFC (Remote Function Call) is considered legacy and less aligned with clean core principles due to its tight coupling.These recommendations are part of SAP's integration strategy for S/4HANA Cloud editions."SOAP and OData are recommended for clean core integrations to ensure standardized and scalable connectivity." (SAP S/4HANA Cloud Integration Guide).

NEW QUESTION # 81
Which of the following can you assign to a service item category? Note: There are 2 correct answers to this question.

- A. Date profile
- B. Status object profile
- C. Text determination procedure
- D. Rejection profile

Answer: A,C

Explanation:
Service item categories in SAP S/4HANA Service (e.g., SRVI for service items) control the behavior of items in service documents. Assignable objects include:
* Text determination procedure: Defines how texts (e.g., descriptions, notes) are automatically populated or managed for the item, configured in Customizing.
* Date profile: Specifies date rules and milestones (e.g., start/end dates) for the service item, critical for scheduling and execution.
* Rejection profile: Not a standard assignment; rejection is managed via status or reasoncodes, not profiles at the item category level.
* Status object profile: Status profiles are typically assigned to transaction types or item categories for lifecycle management, but not as "status object profiles" in this context.These settings are part of service transaction Customizing."Assign text determination procedures and date profiles to service item categories to control item behavior." (SAP Help Portal, Service Item Category Configuration).

NEW QUESTION # 82
What happens when you execute the step "Release for Billing" in an in-house repair process?

- A. The repair confirmation items are automatically set to completed.
- B. A billing document is created for each repair order item.
- C. The system creates a billing document request for each selected repair confirmation item.
- D. Billing due list entries are created for each repair object.

Answer: C

Explanation:

In the in-house repair process in SAP S/4HANA Cloud Private Edition, Service, the "Release for Billing" step initiates the billing process for repair activities. The correct answer is C: "The system creates a billing document request for each selected repair confirmation item." A repair confirmation (e.g., transaction type REPC) records the work done, and when released for billing, the system generates a billing document request (BDR) for each confirmed item that is billable. The BDR is a preliminary document that can later be converted into a billing document (e.g., an invoice) via the billing due list.

* A: Billing due list entries are an outcome of BDRs, not directly created per repair object.

* B: Billing documents are not created immediately; BDRs are created first.

* D: Completion status is separate from billing release.

"Upon executing 'Release for Billing' in an in-house repair process, the system generates a billing document request for each selected repair confirmation item, enabling subsequent invoicing."

NEW QUESTION # 83

In the advanced execution scenario, which order types can you map to a service order type?

- A. Sales order types
- B. Maintenance order types
- C. Purchase order types
- D. Customer service order types

Answer: B

Explanation:

The Service with Advanced Execution scenario in SAP S/4HANA Cloud Private Edition, introduced fully in release 2023, integrates service orders with detailed operational planning via maintenance orders. In this scenario:

* Maintenance order types: These can be mapped to a service order type to enable advanced execution capabilities, such as detailed planning of operations, spare parts, and task lists. This mapping is configured in Customizing under "Plant Maintenance Integration # Map Order Types," allowing a service order item to generate a corresponding maintenance order.

* Purchase order types: These are used for procurement, not directly mapped to service orders in this context.

* Customer service order types: This is not a distinct order type category in SAP S/4HANA Service; service orders themselves are the focus.

* Sales order types: These are unrelated to the advanced execution scenario, which focuses on service and maintenance integration. This integration enhances planning and execution for complex or long- running services. "Map the transaction type and item category used in a maintenance service to a maintenance order type to enable creation of a maintenance order in the Service with Advanced Execution scenario." (SAP Help Portal, Configuring Service with Advanced Execution).

NEW QUESTION # 84

Which capability can proactively inform users about specific issues such as expiring contracts?

- A. Issue monitoring
- B. Situation monitoring
- C. Situation handling
- D. Issue handling

Answer: B

Explanation:

SAP S/4HANA Cloud Private Edition, Service provides capabilities to proactively manage and notify users about critical events, such as expiring contracts. The correct feature is:

* Situation monitoring: This capability uses predefined rules and thresholds to detect situations (e.g., a contract nearing its expiration date) and proactively notifies relevant users via alerts or messages in SAP Fiori apps. It's part of the embedded analytics and service management overview, enabling real- time awareness of issues.

* Issue monitoring: This is a more general term and not a specific SAP capability for proactive notifications about contract expirations.
* Issue handlingandSituation handling: These refer to reactive processes for addressing identified problems, not proactive notifications.Situation monitoring is a key feature in service contract management (scope item 3MO) and analytics, ensuring timely action on critical events."Situation monitoring proactively informs users about critical situations, such as expiring service contracts, through real-time alerts." (SAP S/4HANA Service, Analytical Applications).

NEW QUESTION # 85

......
