Under the help of our Sitecore-XM-Cloud-Developer exam questions, the pass rate among our customers has reached as high as 98% to 100%. We are look forward to become your learning partner in the near future. As we all know, to make something right, the most important thing is that you have to find the right tool. Our Sitecore-XM-Cloud-Developer study quiz is the exact study tool to help you pass the Sitecore-XM-Cloud-Developer exam by your first attempt.

Sitecore Sitecore-XM-Cloud-Developer Exam Syllabus Topics:

Topic	Details
Topic 1	• Deployment of XM Cloud Projects: In this topic different methods to deploy XM Cloud projects including continuous integration and continuous delivery (CI • CD), manual deployment, and using the Sitecore XM Cloud Reference Manager are discussed.
Topic 2	• Sitecore APIs & Webhooks: In this topic, you encounter questions related to the different Sitecore APIs. These APIs are available for developers. With these APIs, developers interact with XM Cloud data and functionality.
Topic 3	• Renderings and Layout: It covers the creation and usage of renderings. These renderings are the building blocks of user interfaces in different XM Cloud apps.
Topic 4	• XM Cloud Architecture and Developer Workflow: This topic delves into the basics of XM Cloud, its key components, architecture, and the development workflow to build and deploy applications on XM Cloud.
Topic 5	• Data Modeling: This topic explains how your data is structured. It explains different entities, their attributes, and how they connect. Furthermore, it explains how to opt the right model, such as relational or hierarchical.

Exam Sitecore-XM-Cloud-Developer Vce - New Sitecore-XM-Cloud-Developer Test Vce

Pass your Sitecore-XM-Cloud-Developer exam certification with Sitecore-XM-Cloud-Developer reliable test. The Test4Sure Sitecore-XM-Cloud-Developer practice material can guarantee you success at your first try. When you choose Sitecore-XM-Cloud-Developer updated dumps, you will enjoy instant downloads and get your Sitecore-XM-Cloud-Developer study files the moment you have paid for them. In addition, the update is frequent so that you can get the Sitecore-XM-Cloud-Developer latest

information for preparation.

Sitecore XM Cloud Developer Certification Exam Sample Questions (Q46-Q51):

NEW QUESTION # 46

What Sitecore Content Serialization command can a developer use to ensure that they don't forget to pull changes made within a developer-managed location?

- A. The watch command
- B. The connect command
- C. The package create command
- D. The sync command

Answer: A

Explanation:

The Sitecore serialization plugin provides the serialization command with the short form `serl`. This command handles the serialization of items in and out of a Sitecore instance. You can use the `watch` subcommand to monitor changes to content items in a Sitecore instance and automatically serialize the changes to your file system. This way, you can ensure that you don't forget to pull changes made within a developer-managed location.

The CLI serialization command

Sitecore Content Serialization structural overview

NEW QUESTION # 47

A developer is working with Sitecore's Authoring and Management API to manage their Sitecore content using GraphQL. They want to explore and interact with the API using the GraphQL integrated development environment (IDE). Which of the following statements is correct about using the GraphQL IDE?

- A. A developer needs to be in the `sitecore\Admin` role to access the GraphQL IDE.
- B. The GraphQL IDE provides read-only access to the API.
- C. A developer needs to be in the `sitecore\Sitecore Client Users` role to access the GraphQL IDE.
- D. The GraphQL IDE is only available for non-production environments to ensure secure interactions.

Answer: A

Explanation:

Sitecore XM Cloud provides a GraphQL Integrated Development Environment (IDE) to allow developers to explore and interact with the Sitecore Content API. This IDE is available at:

`#/sitecore/api/graph/ide`

For security reasons, only users with the `sitecore\Admin` role can access this GraphQL IDE. This restriction ensures that only authorized users can interact with and test queries against the Sitecore content data.

Now, let's analyze each option:

* (A) Correct### A developer must have the `sitecore\Admin` role to access the GraphQL IDE.

* (B) Incorrect### The `sitecore\Sitecore Client Users` role does not grant access to the GraphQL IDE.

* (C) Incorrect### The GraphQL IDE allows both read and write operations, not just read-only access.

* (D) Incorrect### The GraphQL IDE is available for both development and production environments, but proper access control should be enforced in production.

NEW QUESTION # 48

A developer is tasked with creating an item using the Sitecore Authoring and Management GraphQL API. Which of the following GraphQL mutations is the correct way to create a new item?

- A. `createTemplateItem`
- B. `updateItem`

- C. createOrUpdateItem
- D. createItem

Answer: D

Explanation:

In Sitecore XM Cloud, the correct GraphQL mutation to create a new item using the Authoring and Management GraphQL API is `createItem`. This mutation allows developers to programmatically create content items within Sitecore while specifying the required parent item, template, and field values.

Correct Mutation Example

```
mutation {
  createItem(
    parent: "/sitecore/content/Home",
    name: "NewPage",
    template: "Sample/Sample Item",
    fields: [
      { name: "Title", value: "My New Page" },
      { name: "Text", value: "This is a sample text content." }
    ]
  ) {
    item {
      id
      name
      path
    }
  }
}
```

* `parent`# The path or ID of the parent item where the new item should be created.

* `name`# The name of the new item.

* `template`# The template that defines the structure of the item.

* `fields`# The array of field values assigned to the new item.

* `A.createOrUpdateItem`# This mutation does not exist in Sitecore GraphQL API.

* `B.createTemplateItem`# This is an incorrect name; Sitecore does not provide such a mutation.

* `D.updateItem`# This mutation is used to update an existing item, not create a new one.

* Sitecore GraphQL API for Authoring and Management

* GraphQL Mutation to Create an Item

* Sitecore XM Cloud Developer Documentation

Explanation of Parameters: Why Other Options Are Incorrect? Relevant XM Cloud Documentation References:

NEW QUESTION # 49

What is the `sitecore.json` file in a development solution?

- A. The solution integration file needed for deploying code changes to the environment
- B. The configuration file for the Sitecore development tooling
- C. A custom configuration file defining a solution for headless environments
- D. The environment variables file for the Sitecore Docker deployment

Answer: A

Explanation:

The `sitecore.json` file is located in the root folder of the solution and it comes with the XM Cloud Foundation Head starter kit. In here we can configure what `*.module.json` files should be considered for serialization configuration, the plugins with its particular versions and some general settings for the serialization.

NEW QUESTION # 50

A developer needs to create a site for a company and must define the data structures in Sitecore to create items and content. What should the developer use to define the data structures?

- A. Components data sources
- B. Renderings
- **C. Templates**
- D. Rendering parameters

Answer: C

Explanation:

According to the Sitecore XM Cloud Documentation for Developers¹, templates are the fundamental concept in Sitecore that determine the structure and behavior of content items. Templates define the fields, sections, and parameters that make up each item. Templates also enable inheritance, which allows items to share common fields and properties from their base templates. There are different types of templates in Sitecore, such as data templates, branch templates, and command templates².

To create the data structures for a site, the developer should use data templates, which define the fields used to control how data is entered. Data templates form the framework around which items are built. Sitecore associates a data template with every item in the content tree. The field types determine the editing controls shown to the user and they contain the raw values that are stored in the database².

The other options are not correct:

Rendering parameters are custom properties for a component that can be changed by the content author in the XM Cloud Pages editor. Rendering parameters allow the content author to customize the appearance and behavior of the component, but they do not define the data structure of the content item³.

Renderings are items that define the metadata and parameters for a component. Renderings link a component to a data template, a headless variant, and a rendering parameter template. Renderings are used to create and manage components in the Components builder, but they do not define the data structure of the content item⁴.

Component data sources are content items that provide the content for a component. Component data sources can have fields, such as text, image, or link, that can be edited by the content author in the XM Cloud Pages editor. Component data sources are based on data templates, but they are not templates themselves⁴.

2:Data definition and template overview | Sitecore Documentation³:Create a component with rendering parameters | Sitecore Documentation⁴:Create a component that uses a data source item | Sitecore Documentation¹:XM Cloud Documentation for Developers - Sitecore

NEW QUESTION # 51

.....

Knowledge of the Sitecore-XM-Cloud-Developer study materials contains is very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the Sitecore-XM-Cloud-Developer study materials. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite Sitecore-XM-Cloud-Developer Study Materials download. Users can not only learn new knowledge, can also apply theory into the actual problem, but also can leak fill a vacancy, can say such case selection is to meet, so to grasp the opportunity!
