In the Desktop SOL-C01 practice exam software version of Snowflake SOL-C01 practice test is updated and real. The software is useable on Windows-based computers and laptops. There is a demo of the Snowflake Certified SnowPro Associate - Platform Certification (SOL-C01) practice exam which is totally free. Snowflake Certified SnowPro Associate - Platform Certification (SOL-C01) practice test is very customizable and you can adjust its time and number of questions.

If you want to get a better job and relieve your employment pressure, it is essential for you to get the SOL-C01 certification. However, due to the severe employment situation, more and more people have been crazy for passing the SOL-C01 exam by taking examinations, the exam has also been more and more difficult to pass. Our SOL-C01 test guide has become more and more popular in the world. Of course, if you decide to buy our SOL-C01 latest question, we can make sure that it will be very easy for you to pass SOL-C01 exam torrent that you can learn and practice it. Then you just need 20-30 hours to practice our study materials that you can attend your exam. It is really spend your little time and energy.

Knowledge SOL-C01 Points - SOL-C01 Reliable Dumps Sheet

why you need the SOL-C01 exam questions to help you pass the exam more smoothly and easily? There are a lot of the benefits of the SOL-C01 study guide. Firstly, a little practice can perfect you to answer all SOL-C01 new questions in the real exam scenario. Secondly, another amazing benefit of doing the SOL-C01 Practice Tests is that you can easily come to know the real exam format and develop your skills to answer all questions without any confusion. Hence, you can develop your pass percentage.

Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q312-Q317):

NEW QUESTION # 312

A security auditor discovers that multiple users are using the 'ACCOUNTADMIN' role directly for their daily tasks. This violates the principle of least privilege. Which of the following actions should you take to remediate this situation? (Choose two)

- A. Grant the 'SECURITYADMIN' role to these users instead of 'ACCOUNTADMIN'.
- B. Educate the users about the risks of using the 'ACCOUNTADMIN' role and instruct them to use it only when absolutely necessary.
- C. Implement Multi-Factor Authentication (MFA) for all users with the 'ACCOUNTADMIN' role to reduce the risk of unauthorized access.
- D. Create a view that hides sensitive data and grant 'SELECT' on the view to users. Keep granting the 'ACCOUNTADMIN' role.
- E. Create custom roles with specific privileges required for their tasks and grant those roles to the users. Revoke the role from these users.

Answer: C,E

Explanation:

Options A and B are the most appropriate actions. A directly addresses the principle of least privilege by creating custom roles with specific privileges and revoking the 'ACCOUNTADMIN' role. Option B enhances the security posture by implementing MFA, reducing the risk of unauthorized access to the 'ACCOUNTADMIN' role. Option C is a weak mitigation. Option D is not the correct approach, as 'SECURITYADMIN' still has broad privileges. E doesn't address the problem of over-privileging.

NEW QUESTION # 313

A data engineer needs to create a table in Snowflake to store JSON data from an external API.

The API returns a nested JSON structure that is frequently updated with new fields. Which data type is MOST suitable for storing this JSON data, and what are the key considerations for querying it efficiently?

- A. BINARY. Suitable for storing raw JSON bytes. Requires custom conversion functions for querying, resulting in poor performance.
- B. VARIANT. Query efficiency is achieved using dot notation and FLATTEN table function, but storage size might be larger than VARCHAR.
- C. VARCHAR with a size large enough to accommodate the largest expected JSON document. Query efficiency depends on using LIKE and SUBSTRING functions.
- D. ARRAY. Best suited if the primary structure is an array of similar JSON objects, allowing for easy iteration and filtering.
- E. OBJECT. Suitable if the JSON structure is strictly defined and known in advance, allowing for optimized schema and query performance.

Answer: B

Explanation:

VARIANT is the most suitable data type for storing semi-structured data like JSON in Snowflake.

It automatically infers the schema and allows for flexible storage of evolving JSON structures. Dot notation and the FLATTEN table function enable efficient querying of nested fields. While storage might be larger than VARCHAR due to internal metadata, the ease of use and query performance benefits outweigh this cost in many scenarios. Other options are less suitable because VARCHAR requires string manipulation, OBJECT needs a predefined schema, ARRAY requires an array structure, and BINARY needs custom conversion.

NEW QUESTION # 314

You have a role hierarchy where 'ROLE A' has been granted to 'ROLE B', and 'ROLE B' has been granted to User 'USER X'. 'ROLE A' has 'SELECT' privilege on 'TABLE_1' and 'INSERT' privilege on 'TABLE_2'. Assume that 'USER X' is currently using the 'ACCOUNTADMIN' role.

Which of the following statements accurately describe the privileges available to 'USER X'? (Choose two)

- A. 'USER X' can SELECT from only when the active role is set to
- B. 'USER X' can SELECT from 'TABLE_1' and INSERT into 'TABLE_2' only when the active role is set to 'ROLE_B'
- C. 'USER X' cannot SELECT from 'TABLE_1' or INSERT into 'TABLE_2' because the privileges are not directly granted to the user, as the active role is set to ACCOUNTADMIN.

- D. USER_X can SELECT from 'TABLE_1' and INSERT into 'TABLE_2' regardless of the active role.

Answer: B

Explanation:

Option B: The privileges associated with 'ROLE_A' are inherited by , and then by 'USER_X' when 'ROLE_B' is activated. Thus, USER_X can select from table 1 and insert into table_2 when active role is Role B. Option E: Because Accountadmin can do almost anything, any user in a session with active role accountadmin can perform nearly any operation. Option A is incorrect because user must use role B to select from table 1. Option C is incorrect because to select/insert, user must use role B or ACCOUNTADMIN .Option D is incorrect because the role hierarchy allows privilege inheritance. The privileges granted to roles are accessible only when those roles are active, and USER_X can perform any account related task with ACCOUNTADMIN.

NEW QUESTION # 315

You have a table 'CUSTOMER REVIEWS' with a column 'REVIEW TEXT' containing unstructured customer feedback. You want to use CLASSIFY TEXT to categorize these reviews into predefined categories like 'Product Quality', 'Customer Service', and 'Shipping'. You plan to create a materialized view to store the classifications for faster querying. Which of the following SQL statements is the most efficient and correct way to achieve this using CLASSIFY TEXT, assuming the function has already been granted usage privileges?

- A. CREATE MATERIALIZED VIEW CLASSIFIED_REVIEWS AS SELECT REVIEW_TEXT, OBJECT CONSTRUCT('categories', ARRAY CONSTRUCT('Product Quality', 'Customer Service', 'Shipping')) AS CATEGORY FROM CUSTOMER REVIEWS;
- B. CREATE MATERIALIZED VIEW CLASSIFIED_REVIEWS AS SELECT REVIEW_TEXT, Quality, 'Customer Service', 'Shipping')) AS CATEGORY FROM CUSTOMER REVIEWS;
- C. CREATE MATERIALIZED VIEW CLASSIFIED_REVIEWS AS SELECT REVIEW_TEXT, ['Product Quality', 'Customer Service', 'Shipping']) AS CATEGORY FROM CUSTOMER REVIEWS;
- D. CREATE MATERIALIZED VIEW CLASSIFIED_REVIEWS AS SELECT REVIEW_TEXT, Quality, 'Customer Service', 'Shipping']) AS CATEGORY FROM CUSTOMER REVIEWS;
- E. CREATE MATERIALIZED VIEW CLASSIFIED_REVIEWS AS SELECT REVIEW_TEXT, 'Product Quality', 'Customer Service', 'Shipping') AS CATEGORY FROM CUSTOMER REVIEWS;

Answer: B

Explanation:

The correct syntax for providing categories to CLASSIFY TEXT is using ARRAY CONSTRUCT.

Option B is the only one that correctly uses ARRAY_CONSTRUCT to pass the categories as an array. Options A, C, D and E all use incorrect syntax and will result in errors. Materialized views are suitable for storing the results of CLASSIFY TEXT for performance reasons.

NEW QUESTION # 316

You are using a Snowflake Notebook to build a Streamlit dashboard that allows users to filter sales data based on region and product category. The sales data is in a Snowflake table named 'SALES'. You want to enable users to select multiple regions and product categories from multi-select boxes in the Streamlit application. How would you construct the SQL query to efficiently filter the data based on the user's selections, using parameters passed from Streamlit?

- A.

```
import streamlit as st

regions = st.multiselect('Select Regions', ['North', 'South', 'East', 'West'])
categories = st.multiselect('Select Categories', ['Electronics', 'Clothing', 'Home Goods'])

region_str = ', '.join([f'{r}' for r in regions])
category_str = ', '.join([f'{c}' for c in categories])

query = f"SELECT * FROM SALES WHERE REGION IN ({region_str}) AND PRODUCT_CATEGORY IN ({category_str})"
```
- B.

☐ SELECT FROM SALES WHERE REGION = '{selected_region}' AND PRODUCT_CATEGORY = '{selected_category}' (where '{selected_region}' and '{selected_category}' are single strings passed directly from Streamlit)

• C.

☐ SELECT FROM SALES WHERE REGION IN ('{selected_regions}') AND PRODUCT_CATEGORY IN ('{selected_categories}') (where '{selected_regions}' and '{selected_categories}' are comma-separated strings generated from the lists of selected options in Streamlit)

• D.

☐ SELECT FROM SALES WHERE REGION IN ({selected_regions}) AND PRODUCT_CATEGORY IN ({selected_categories}) (where '{selected_regions}' and '{selected_categories}' are lists directly passed from Streamlit without any modification)

• E.

```
import streamlit as st

regions = st.multiselect('Select Regions', ['North', 'South', 'East', 'West'])
categories = st.multiselect('Select Categories', ['Electronics', 'Clothing', 'Home Goods'])

query = f"SELECT FROM SALES WHERE REGION = ANY({regions}) AND PRODUCT_CATEGORY = ANY({categories})"
```

Answer: A

Explanation:

Option D provides the most accurate and secure way to construct the SQL query. By correctly formatting the lists of selected regions and categories as comma-separated strings with single quotes around each value and then embedding these strings within the 'IN' clause, you avoid SQL injection vulnerabilities. Option E can be suitable if snowflake support ANY with Lists directly but D is more widely compatible way. The other options are either vulnerable to SQL injection (A and B), or incorrect in how they handle the list of selected values (C).

NEW QUESTION # 317

.....

Clear the Snowflake SOL-C01 exam with ease by using our top-rated practice test material. With thousands of satisfied applicants in multiple countries, our product guarantees that you will pass the Snowflake Certified SnowPro Associate - Platform Certification (SOL-C01) exam as quickly as possible. And if you don't pass, we'll refund your money! Some terms and conditions apply, which are outlined on our guarantee page. Don't miss out on this incredible opportunity – purchase our SOL-C01 Practice Test material today!
