Splunk Enterprise Certified Admin Sample Questions (Q56-Q61):

NEW QUESTION # 56

Which of the following are available input methods when adding a file input in Splunk Web? (Choose all that apply.)

- A. On-demand monitor.
- B. Index once.
- C. Monitor interval.
- D. Continuously monitor.

Answer: B,D

Explanation:

Explanation

<https://docs.splunk.com/Documentation/Splunk/8.2.2/Data/Howdoyouwanttoadddata> The fastest way to add data to your Splunk Cloud instance or Splunk Enterprise deployment is to use Splunk Web. After you access the Add Data page, choose one of three options for getting data into your Splunk platform deployment with Splunk Web: (1) Upload, (2) Monitor, (3) Forward The Upload option lets you upload a file or archive of files for indexing. When you choose Upload option, Splunk Web opens the upload process page. Monitor. For Splunk Enterprise installations, the Monitor option lets you monitor one or more files, directories, network streams, scripts, Event Logs (on Windows hosts only), performance metrics, or any other type of machine data that the Splunk Enterprise instance has access to.

NEW QUESTION # 57

User role inheritance allows what to be inherited from the parent role? (select all that apply)

- **A. Index access**
- B. Search history
- C. Capabilities
- D. Parents

Answer: A

NEW QUESTION # 58

Which of the following describes a Splunk deployment server?

- A. A Splunk app installed on a Splunk Enterprise server.
- B. A server that automates the deployment of Splunk Enterprise to remote servers.
- **C. A Splunk Enterprise server that distributes apps.**
- D. A Splunk Forwarder that deploys data to multiple indexers.

Answer: C

Explanation:

A Splunk deployment server is a system that distributes apps, configurations, and other assets to groups of Splunk Enterprise instances. You can use it to distribute updates to most types of Splunk Enterprise components: forwarders, non-clustered indexers, and search heads².

A Splunk deployment server is available on every full Splunk Enterprise instance. To use it, you must activate it by placing at least one app into %SPLUNK_HOME%\etc\deployment-apps on the host you want to act as deployment server³.

A Splunk deployment server maintains the list of server classes and uses those server classes to determine what content to distribute to each client. A server class is a group of deployment clients that share one or more defined characteristics¹.

A Splunk deployment client is a Splunk instance remotely configured by a deployment server. Deployment clients can be universal forwarders, heavy forwarders, indexers, or search heads. Each deployment client belongs to one or more server classes¹.

A Splunk deployment app is a set of content (including configuration files) maintained on the deployment server and deployed as a unit to clients of a server class. A deployment app can be an existing Splunk Enterprise app or one developed solely to group some content for deployment purposes¹.

Therefore, option C is correct, and the other options are incorrect.

NEW QUESTION # 59

When running the command shown below, what is the default path in which deployment server.conf is created?

```
splunk set deploy-poll deployServer:port
```

- A. SPLUNK_KOME/etc/apps/deployment
- B. SPLUNK_HOME/etc/system/local
- C. SFLUNK_HOME/etc/deployment
- **D. SPLUNK_HOME/etc/system/default**

Answer: D

Explanation:

Explanation

https://docs.splunk.com/Documentation/Splunk/8.1.1/Updating/Defineddeploymentclasses#Ways_to_define_serv

"When you use forwarder management to create a new server class, it saves the server class definition in a copy of serverclass.conf under \$SPLUNK_HOME/etc/system/local. If, instead of using forwarder management, you decide to directly edit serverclass.conf, it is recommended that you create the serverclass.conf file in that same directory, \$SPLUNK_HOME/etc/system/local."

NEW QUESTION # 60

What is the correct order of steps in Duo Multifactor Authentication?

- A. 1. Request Login 2 Duo MFA
3. Authentication Granted 4 Connect to SAML server
5. Log into Splunk
6. Create User session
- B. 1 Request Login 2 Duo MFA
3. Check authentication / group mapping
4 Create User session
5. Authentication Granted
6 Log into Splunk
- C. 1 Request Login
2 Check authentication / group mapping
3 Authentication Granted
4. Duo MFA
5. Create User session
6. Log into Splunk
- D. 1 Request Login
2. Connect to SAML server
3 Duo MFA
4 Create User session
5 Authentication Granted 6. Log into Splunk

Answer: C
