SAP Certified Professional - Developer - SAP Commerce Cloud Sample Questions (Q65-Q70):

NEW QUESTION # 65

What can you do within the integration UI Tool in Back office? Note. There are 2 correct answers to this question.

- A. Create a search restriction to secure an integration object for only a certain integration user group.
- **B. Export the configuration types so that they can be imported into a target system.**
- C. Force-delete an integration object, even if it is associated with an InboundChannelConfiguration (ICC).
- **D. Set up access rights for integration objects.**

Answer: B,D

NEW QUESTION # 66

Your solution has been live for a significant period of time. Now you need to update project data across multiple environments, but this update should only be executed once. What is the recommended approach for updating the project data?

- A. Extract a SQL script of all the changes in a single environment, which a DBA can then run directly against the database for

all remaining environments.

- B. Create a class that extends AbstractPatchesSystemSetup and configure any data patches, which can run an import of your ImpEx files during an update.
- C. With each deployment, manually import the ImpEx files via the hybris Admin Console or via the ant importimpex target.
- D. Create a class that extends AbstractSystemSetup and use the @SystemSetup annotation with TYPE.PROJECT, which can run an import of your ImpEx files during an update.

Answer: D

NEW QUESTION # 67

you are implementing two new independent extensions, extension A and extension B, both of which extend and overwrite a bean that's defined in the core platform how can you make sure the bean from extension A doesn't override the one from extension B?

Note: There are 2 correct answers to this question.

- A. List extension B after extension A in localextensions.xml.
- B. Ensure that only one of the extensions is included in the build.
- C. In the bean's XML definition in extension B, use the parent attribute to specify the core bean.
- D. Define a dependency in which extension B requires extension

Answer: C,D

NEW QUESTION # 68

You are creating a business process (mybusinessprocess) that requires an action (actionB) to pass an info String value to another action (actionE) occurring later in the process. What do you need to do to make this possible? Note: There are 2 correct answers to this question.

- A. Create a myBusinessProcess item type that extends BusinessProcess and adds an info String property. Specify myBusinessProcessModel as the processClass argument to the process
- B. In the mybusinessprocess.xml definition file, define an info event and configure actionB as the event's originator and actionE as its target. Trigger the event in the class implementing actionB using businessProcessService.triggerEvent(info).
- C. Create an event myEvent that extends the AbstractProcessEvent and adds an info String property. Register the target action as a listener for this event. Fire the event with eventService.publishEvent (myEvent).
- D. Create a myBusinessProcess item type that extends BusinessProcess and adds an info String property. Use an instance of this type to start the process in your Java code with businessProcessService.startProcess(new myBusinessProcessModel).

Answer: A,D

NEW QUESTION # 69

Which of the following are true regarding dynamic and non-dynamic enumerations in SAP Commerce (Hybris)?

- A. Dynamic enumerations are stored in memory only.
- B. Non-dynamic enumerations are stored as HybrisEnum/value objects.
- C. Dynamic enumerations are stored in the database.
- D. Non-dynamic enumerations are stored as enumeration classes.

Answer: C,D

NEW QUESTION # 70

.....
