

Valid Test 1Z0-1109-25 Vce Free & 1Z0-1109-25 Online Tests

BONUS!!! Download part of VCETorrent 1Z0-1109-25 dumps for free: <https://drive.google.com/open?id=1C8twAouuaDZZXsbt0FVkuUieRnXLO5bY>

The VCETorrent is a leading platform that has been helping the Oracle 1Z0-1109-25 exam aspirants for many years. Over this long time period, thousands of Oracle Cloud Infrastructure 2025 DevOps Professional (1Z0-1109-25) exam candidates have passed their dream Oracle 1Z0-1109-25 Certification Exam and have become a member of Oracle 1Z0-1109-25 certification exam community. They all got help from valid, updated, and real 1Z0-1109-25 exam dumps.

Oracle 1Z0-1109-25 Exam Syllabus Topics:

Topic	Details
Topic 1	- Enabling DevSecOps: This domain measures the skills of Security Engineers and DevSecOps Practitioners in integrating security into DevOps workflows. It includes managing encryption keys with OCI Vault, securing CI - CD pipelines, and ensuring container image security to align with DevSecOps best practices.

Topic 2	• Using Code and Templates for Provisioning and Configuring Infrastructure: This domain evaluates the expertise of DevOps Engineers and Infrastructure Architects in deploying infrastructure using Infrastructure as Code (IaC) tools like Terraform. It focuses on automating resource provisioning with OCI Resource Manager to ensure consistent and efficient infrastructure setups.
Topic 3	• Understand DevOps Principles and Effectively Work with Containerization Services: This section of the exam measures the skills of DevOps Engineers and Cloud Architects in applying DevOps methodologies and containerization practices. It covers implementing a microservices architecture, creating Docker containers, and managing Oracle Cloud Infrastructure Registry (OCIR) and Container Instances to streamline application deployment and scalability.

1Z0-1109-25 Online Tests, Test 1Z0-1109-25 Questions Answers

We have a long history of 10 years in designing the 1Z0-1109-25 exam guide and enjoys a good reputation across the globe. There are so many features to show that our 1Z0-1109-25 study engine surpasses others. We can confirm that the high quality is the guarantee to your success. At the same time, the prices of our 1Z0-1109-25 practice materials are quite reasonable for no matter the staffs or the students to afford. What is more, usually we will give some discounts to our worthy customers.

Oracle Cloud Infrastructure 2025 DevOps Professional Sample Questions (Q51-Q56):

NEW QUESTION # 51

Which statement is false about OCI Resource Manager (RM)?

- A. Resources provisioned through RM cannot be destroyed from outside of RM.
- B. RM can mirror repositories from GitHub and GitLab.
- C. RM can generate Terraform based on the resources in a compartment.
- D. RM can render custom "Application Information" pages for stacks.

Answer: A

Explanation:

Resources provisioned through OCI Resource Manager (RM) can still be modified or destroyed from outside of RM, such as using the OCI Console, CLI, or other APIs. RM manages the lifecycle of resources created by its Terraform configurations, but it does not prevent other tools or methods from modifying or deleting those resources.

NEW QUESTION # 52

How can you scale a deployment named nodejs-deployment to have two replicas?

- A. `kubectl resize deployment nodejs-deployment --replicas=2`
- B. `kubectl set replicas deployment nodejs-deployment --replicas=2`
- C. `kubectl adjust deployment nodejs-deployment --replicas=2`
- D. `kubectl scale deployment nodejs-deployment --replicas=2`

Answer: D

Explanation:

The `kubectl scale` command is used to scale the number of replicas in a deployment. By specifying the `--replicas` flag, you define the desired number of replicas for the deployment.

`(kubectl set replicas)` is not the correct syntax for scaling a deployment.

`(kubectl resize)` is not a valid command for scaling a deployment.

`(kubectl adjust)` is also not a valid Kubernetes command.

NEW QUESTION # 53

Your team is working on a project to deploy a microservices-based application on a cloud platform using Terraform. Each microservice has specific configurations and dependencies, and you want to ensure modularity, reusability, and consistency across deployments.

Which Terraform feature would you use to achieve these objectives efficiently?

- A. Terraform Variables
- **B. Terraform Modules**
- C. Terraform Workspaces
- D. Terraform Providers

Answer: B

Explanation:

Terraform Modules are used to organize and group related configuration resources into reusable components. By using modules, you can achieve modularity, reusability, and consistency across different deployments, making it easier to manage complex infrastructure setups.

For a microservices-based application, where each microservice has specific configurations and dependencies, modules allow you to define the infrastructure for each microservice in a modular way. This helps to maintain clean, reusable code and ensures consistency across deployments.

NEW QUESTION # 54

Which OCI DevOps project resource is responsible for defining the stages for compiling, testing, and running software applications before deployment?

- A. Development pipelines
- B. Deployment pipelines
- C. Integration pipelines
- **D. Build pipelines**

Answer: D

Explanation:

Build pipelines in OCI DevOps are responsible for defining the stages involved in compiling, testing, and running software applications. These pipelines automate the process of building the code, running unit tests, scanning for vulnerabilities, and packaging the software, all of which occur before deploying the application.

NEW QUESTION # 55

Your team is responsible for deploying a new version of an application that is being used by your company's finance department. The application is critical to the department's operations, and any downtime could have serious consequences.

What is the recommended approach in OCI for creating environments for this scenario?

- A. Configure two OKE clusters, selecting the blue-green traffic shift strategy using a load balancer.
- **B. Use a single Kubernetes cluster with two node pools, one for the blue-green environment and one for the canary environment.**
- C. Use a single OCI region and create two separate Virtual Cloud Networks (VCNs), one for the blue environment and one for the green environment.
- D. Deploy the application to two separate OCI tenancies to ensure complete isolation between environments.

Answer: B

Explanation:

For critical applications, such as the one used by the finance department, a blue-green deployment strategy is recommended to ensure minimal or zero downtime during upgrades. The blue-green strategy involves running two separate environments: blue (current version) and green (new version).

NEW QUESTION # 56

.....

Our 1Z0-1109-25 preparation exam have assembled a team of professional experts incorporating domestic and overseas experts and scholars to research and design related exam bank, committing great efforts to help the candidates to pass the 1Z0-1109-25 exam. Most of the experts have been studying in the professional field for many years and have accumulated much experience in our 1Z0-1109-25 Practice Questions. Our company is considerably cautious in the selection of talent and always hires employees with store of specialized knowledge and skills to help you get the dreaming 1Z0-1109-25 certification.
