

Valid Test AZ-120 Format & New AZ-120 Practice Questions

2025 Latest ValidVCE AZ-120 PDF Dumps and AZ-120 Exam Engine Free Share: https://drive.google.com/open?id=1uxFb4H4aWTwvuFb1kAZ6wC1G_NHK9ytV

Our company has employed a lot of leading experts in the field to compile the AZ-120 exam torrents, so you can definitely feel rest assured about the high quality of our AZ-120 question torrents. On the other thing, the pass rate among our customers who prepared the exam under the guidance of our AZ-120 Study Materials has reached as high as 98% to 100%. What's more, you will have more opportunities to get promotion as well as a pay raise in the near future after using our AZ-120 question torrents since you are sure to get the certification.

As for the points you may elapse or being frequently tested in the real exam, we give referent information, then involved them into our AZ-120 actual exam. Our experts expertise about AZ-120 training materials is unquestionable considering their long-time research and compile. I believe that no one can know the AZ-120 Exam Questions better than them. And they always keep a close eye on the changes of the content and displays of the AZ-120 study guide.

Accurate Valid Test AZ-120 Format | Amazing Pass Rate For AZ-120 Exam | Free Download AZ-120: Planning and Administering Microsoft Azure for SAP Workloads

Wondering where you can find the perfect materials for the exam? Don't leave your fate depending on thick books about the exam. Our authoritative Planning and Administering Microsoft Azure for SAP Workloads practice materials are licensed products. Whether newbie or experienced exam candidates you will be eager to have them. And they all made huge advancement after using them. So prepare to be amazed by our AZ-120 practice materials. We can absolutely guarantee that even if the first time to take the exam, candidates can pass smoothly.

Candidates for the Microsoft AZ-120 Exam should have a solid understanding of SAP applications, as well as experience with Azure services such as Azure Active Directory, Azure Backup, Azure Site Recovery, and Azure Security Center. They should also be familiar with Azure infrastructure and deployment models, including virtual machines, containers, and serverless computing.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q281-Q286):

NEW QUESTION # 281

You plan to migrate an on-premises SAP development system to Azure.

Before the migration, you need to check the usage of the source system hardware, such as CPU, memory, network, etc.

Which transaction should you run from SAP GUI?

- A. SM51
- B. DB01
- C. OS07N
- D. DB12

Answer: C

Explanation:

SAP transaction OS07N (Remote Operating System Activity) is classified in the Basis Component module under application component Operating System Monitors and runs Monitoring Operating System program RSHOST1N upon execution.

References:

<http://www.saptransactions.com/codes/OS07N/>

NEW QUESTION # 282

You plan to deploy an SAP environment on Azure that will use Azure Availability Zones.

Which load balancing solution supports the deployment?

- A. Azure Standard Load Balancer
- B. Azure Application Gateway v1 SKU
- C. Azure Basic Load Balancer

Answer: A

Explanation:

When you deploy Azure VMs across Availability Zones and establish failover solutions within the same Azure region, some restrictions apply:

You can't use an Azure Basic Load Balancer to create failover cluster solutions based on Windows Server Failover Clustering or Linux Pacemaker. Instead, you need to use the Azure Standard Load Balancer SKU.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/workloads/sap/sap-ha-availability-zones>

Topic 1, Contoso Ltd

Existing Environment

Active Directory

The network contains an on-premises Active Directory domain named ad.contoso.com. User email addresses use a domain name of contoso.com.

SAP Environment

The current SAP environment contains the following components:

SAP Solution Manager

SAP ERP Central Component (SAP ECC)

SAP Supply Chain Management (SAP SCM)

SAP application servers that run Windows Server 2008 R2

SAP HANA database servers that run SUSE Linux Enterprise Server 12 (SLES 12) Problem Statements Contoso identifies the following issues in its current environment:

The SAP HANA environment lacks adequate resources.

The Windows servers are nearing the end of support.

The datacenters are at maximum capacity.

Requirements

Planned Changes

Contoso identifies the following planned changes:

Deploy Azure Virtual WAN.

Migrate the application servers to Windows Server 2016.

Deploy ExpressRoute connections to all of the offices and manufacturing facilities.

Deploy SAP landscapes to Azure for development, quality assurance, and production.

All resources for the production landscape will be in a resource group named SAPProduction.

Business goals

Contoso identifies the following business goals:

Minimize costs whenever possible.

Migrate SAP to Azure without causing downtime.

Ensure that all SAP deployments to Azure are supported by SAP.

Ensure that all the production databases can withstand the failure of an Azure region.

Ensure that all the production application servers can restore daily backups from the last 21 days.

Technical Requirements

Contoso identifies the following technical requirements:

Inspect all web queries.

Deploy an SAP HANA cluster to two datacenters.

Minimize the bandwidth used for database synchronization.

Use Active Directory accounts to administer Azure resources.

Ensure that each production application server has four 1-TB data disks.

Ensure that an application server can be restored from a backup created during the last five days within 15 minutes.

Implement an approval process to ensure that an SAP administrator is notified before another administrator attempts to make changes to the Azure virtual machines that host SAP.

It is estimated that during the migration, the bandwidth required between Azure and the New York office will be 1 Gbps. After the migration, a traffic burst of up to 3 Gbps will occur.

Proposed Backup Policy

An Azure administrator proposes the backup policy shown in the following exhibit.

The screenshot displays the 'SapPolicy' configuration in the Azure Backup Policy interface. The 'Policy name' is 'SapPolicy'. Under 'Backup schedule', the frequency is 'Daily' at '3:30 AM' in '(UTC) Coordinated Universal Time'. The 'Instant Restore' section shows 'Retain instant recovery snapshot(s) for 5 Day(s)'. The 'Retention range' section includes: 'Retention of daily backup point' (checked, 3:30 AM to 14 Day(s)); 'Retention of weekly backup point' (checked, Sunday 3:30 AM to 8 Week(s)); 'Retention of monthly backup point' (checked, First Sunday 3:30 AM to 12 Month(s)); and 'Retention of yearly backup point' (checked, January First Sunday 3:30 AM to 7 Year(s)). A watermark for 'validvce.com' and the Microsoft logo are visible over the form.

Azure Resource Manager Template

An Azure administrator provides you with the Azure Resource Manager template that will be used to provision the production

application servers.

```
"apiVersion": "2017-03-30",
"type": "Microsoft.Compute/virtualMachines",
"name": "[parameters('vmname')]",

"location": "EastUS",
"dependsOn": [
  "[resourceId('Microsoft.Network/networkInterfaces/', parameters('vmname'))]"
],
"properties": {
  "hardwareProfile": {
    "vmSize": "[parameters('vmSize')]"
  },

            },
            "protectedsettings": {
                "Password": "[parameters('domainPassword')]"
            }
        }
    }
]
}
}

```

NEW QUESTION # 283

You are evaluating the proposed backup policy.

For each of the following statements, select Yes if the statement is true. otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements

Yes

No

The backup policy meets the technical requirements.

☐
☐

The backup policy meets the business requirements.

☐
☐

If the backup policy is implemented, a deleted file can be restored to the running virtual machine one year after the file was deleted.

☐
☐

Answer:

Explanation:

Statements	Yes	No
The backup policy meets the technical requirements.	☐	☐
The backup policy meets the business requirements.	☐	☐
If the backup policy is implemented, a deleted file can be restored to the running virtual machine one year after the file was deleted.	☐	☐

Explanation:

Statements	Yes	No
The backup policy meets the technical requirements.	☐	☐
The backup policy meets the business requirements.	☐	☐
If the backup policy is implemented, a deleted file can be restored to the running virtual machine one year after the file was deleted.	☐	☐

Box 1: Yes

Scenario: Technical requirements: Ensure that an application server can be restored from a backup created during the last five days within 15 minutes.

Instant Restore has 'The instance recovery snapshot(s) for 5 Day(s)'.

Box 2: No

Scenario: Ensure that all the production application servers can restore daily backups from the last 21 days.

The Retention of daily backup point is set to for 14 days only.

Box 3: Yes

Reference:

<https://docs.microsoft.com/en-us/azure/backup/backup-instant-restore-capability>

NEW QUESTION # 284

You deploy SAP HANA by using SAP HANA on Azure (Large Instances).

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can use SAP HANA Studio to monitor CPU, memory, network, and storage usage for SAP HANA on Azure (Large Instances).	☐	☐
Azure Enhanced Monitoring is required to monitor the performance of SAP HANA on Azure (Large Instances).	☐	☐
You can use the SAP HANA Hardware Configuration Check Tool (HWCCT) to monitor SAP HANA running on SAP HANA on Azure (Large Instances).	☐	☐

Answer:

Explanation:

Statements	Yes	No
You can use SAP HANA Studio to monitor CPU, memory, network, and storage usage for SAP HANA on Azure (Large Instances).	☐	☒
Azure Enhanced Monitoring is required to monitor the performance of SAP HANA on Azure (Large Instances).	☒	☐
You can use the SAP HANA HW Configuration Check Tool (HWCCT) to monitor SAP HANA running on SAP HANA on Azure (Large Instances).	☐	☒

Explanation:

Box 1: No

Box 2: Yes

The SAP Azure Enhanced Monitoring Extension allows for collecting diagnostic data including OS and Application performance counters from Azure VMs running SAP workloads.

Box 3: No

References:

<http://www.deployazure.com/compute/virtual-machines/sap-azure-enhanced-monitoring-extension/>

Topic 1, Litware, inc

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all question include on this exam in the time provided.

To answer the question included in a case study, you will need to reference information that is provided in the case study. Case studies might contain and other resources that provide information about the scenario that is describe in the case study. Each question is independent of the other question in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answer and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To Start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such the content requirements, existing environment, and problem statements, if the case study has an All Information tab, note that the information displayed its identical to the information displayed on the subsequence tabs. When you are ready to answer a question click the Question button to return to the question.

Overview

Litware, inc. is an international manufacturing company that has 3,000 employees.

Litware has two main offices. The offices are located in Miami, FL, and Madrid Spain.

Existing Environment

Infrastructure

Litware currently uses a third-party provider to host a datacenter in Miami and a disaster recovery datacenter in Chicago, it.

The network contains an Active Directory domain named litware.com.Litware has two third-party applications hosted in Azure.

Litware already implemented a site-to-site VPN connection between the on-premises network and Azure.

SAP Environment

Litware currently runs the following SAP products:

- * Enhancement Pack 6 for SAP ERP Central Component 6.0 (SAP ECC 6.0)
- * SAP Extended Warehouse Management (SAP EWM)
- * SAP Business Warehouse (SAP BW)
- * SAP NetWeaver Process Integration (PI)
- * SAP Solution Manager

All users run on the Windows Server platform. All databases use Microsoft SQL Server. Currently, you have 20 production servers.

You have 30 non-production servers including five testing severs, five development servers, five quality assurance (QA) servers, and 15 pre=production servers.

Currently, all SAP applications are in the litware.com domain.

Problem Statements

The current version of SAP ECC has a transaction that, when run in batches overnight, tables eight hours to complete. You confirm that upgrading to SAP Business Suite on HANA will improve performance because of code changes and the SAP HANA database platform.

Litware is dissatisfied with the performance of its current hosted infrastructure vendor. Litware experienced several hardware failures and the vendor struggled to adequately its 24/7 business operation.

Business Goals

Litware identifies the following business goals:

- * Increase the performance of SAP ECC application by moving to SAP HANA. All other database will remain on SQL Server.
- * Move away from the current infrastructure vendor to increase the stability and availability of the SAP services.
- * Use the new Environment, Health and Safety (EH&S) in Recipe Management function.
- * Ensure that any migration activities can be completed within a 48-hour period during a weekend.

Planned Changes

Litware identifies the following planned changes:

- * Migrate SAP to Azure.
- * Upgrade and migrate SAP ECC to SAP business Suite on HANA Enhancement Pack 8.

Technical Requirements

Litware identifies the following technical requirements:

- * Implement automated backups.
- * Support load testing during the migrate.
- * Identify opportunities to reduce costs during the migration.
- * Continue to use the Litware.com domain for all SAP landscapes.
- * Ensure that all SAP applications and databases are highly available.
- * Remove all SAP components from the on-premises network once the migrate is complete.
- * Minimize the purchase of additional SAP licenses. SAP HANA license were already purchased.
- * Ensure that SAP can provide technical support for all the SAP landscapes deployed to Azure.

NEW QUESTION # 285

You are validating an SAP HANA on Azure (Large Instances) deployment.

You need to ensure that sapconf is installed and the kernel parameters are set appropriately for the active profile.

How should you complete the commands? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Values

sap-ase

sap-bobj

sapconf

sap-hana

sap-netweaver

saptune

tuned

Answer Area

```
osprompt> more /etc/sysconfig/
```

Value

```
osprompt> more /usr/lib/tuned/
```

Value

/tuned.conf

Answer:

Explanation:

Disposable vapes
