The Data-Cloud-Consultant Exam is one of the best platforms that have been helping the Salesforce Data-Cloud-Consultant exam candidates in their preparation. Several Salesforce Data-Cloud-Consultant exam candidates have already passed their Salesforce Certified Data Cloud Consultant exam with good scores. They all used the Exams. Data-Cloud-Consultant Exam Questions and got success in the final Salesforce Data-Cloud-Consultant exam easily.

Salesforce Data-Cloud-Consultant Exam Syllabus Topics:

Topic	Details
Topic 1	Segmentation and Insights: This topic defines basic concepts of segmentation and use cases, identifies scenarios for analyzing segment membership, configuring, refining, and maintaining segments within Data Cloud, and differentiating between calculated and streaming insights.

Topic 2	• Data Cloud Setup and Administration: This topic includes applying Data Cloud permissions, permission sets, org-wide settings. It describes and configures data stream types, and data bundles. Moreover, it discusses use cases for data spaces, creating data spaces, managing and administering Data Cloud using reports, dashboards, flows, packaging, data kits, diagnosing and exploring data using Data Explorer, Profile Explorer, and APIs.
Topic 3	• Identity Resolution: It describes matching and how its rule sets are applied. Furthermore, it discusses reconciling data and its rule sets, the results of identity resolution, and use cases.

Study Data-Cloud-Consultant Materials & Data-Cloud-Consultant Mock Exams

You may be busy in your jobs, learning or family lives and can't get around to preparing and takes the certificate exams but on the other side you urgently need some useful Data-Cloud-Consultant certificates to improve your abilities in some areas. So is there a solution which can kill two birds with one stone to both make you get the certificate and spend little time and energy to prepare for the exam? Our Data-Cloud-Consultant study materials provide a variety of functions to help the clients improve their learning. For example, the function to stimulate the exam helps the clients test their learning results of the Data-Cloud-Consultant study materials in an environment which is highly similar to the real exam.

Salesforce Certified Data Cloud Consultant Sample Questions (Q140-Q145):

NEW QUESTION # 140

A consultant needs to publish segment data to the Audience DMO that can be retrieved using the Query APIs. When creating the activation target, which type of target should the consultant select?

- A. Marketing Cloud Personalization
- B. External Activation Target
- C. Data Cloud
- D. Marketing Cloud

Answer: C

NEW QUESTION # 141

A user has built a segment in Data Cloud and is in the process of creating an activation. When selecting related attributes, they cannot find a specific set of attributes they know to be related to the individual. Which statement explains why these attributes are not available?

- A. The segment is not segmenting on profile data.
- B. The desired attributes reside on different related paths.
- C. Activations can only include 1-to-1 attributes.
- D. The attributes are being used in another activation.

Answer: B

Explanation:
Explanation

The correct answer is C, the desired attributes reside on different related paths. When creating an activation in Data Cloud, you can select related attributes from data model objects that are linked to the segment entity.

However, not all related attributes are available for every activation. The availability of related attributes depends on the container path, which is the sequence of data model objects that connects the segment entity to the related entity. For example, if you segment on the Unified Individual entity, you can select related attributes from the Order Product entity, but only if the container path is Unified Individual > Order > Order Product. If the container path is Unified Individual > Order Line Item > Order Product, then the related attributes from Order Product are not available for activation. This is because Data Cloud only supports one-to-many relationships for related attributes, and Order Line Item is a many-to-many junction object between Order and Order Product.

Therefore, you need to ensure that the desired attributes reside on the same related path as the segment entity, and that the path does not include any many-to-many junction objects. The other options are incorrect because they do not explain why the related attributes are not available. The segment entity can be any data model object, not just profile data. The attributes are not restricted by being used in another activation. Activations can include one-to-many attributes, not just one-to-one attributes. References:

NEW QUESTION # 142

A consultant is setting up a data stream with transactional data,
Which field type should the consultant choose to ensure that leading zeros in the purchase order number are preserved?

- A. Number
- **B. Text**
- C. Decimal
- D. Serial

Answer: B

Explanation:

The field type Text should be chosen to ensure that leading zeros in the purchase order number are preserved. This is because text fields store alphanumeric characters as strings, and do not remove any leading or trailing characters. On the other hand, number, decimal, and serial fields store numeric values as numbers, and automatically remove any leading zeros when displaying or exporting the data 123. Therefore, text fields are more suitable for storing data that needs to retain its original format, such as purchase order numbers, zip codes, phone numbers, etc. Reference:

Zeros at the start of a field appear to be omitted in Data Exports

Keep First '0' When Importing a CSV File

Import and export address fields that begin with a zero or contain a plus symbol

NEW QUESTION # 143

Which operator should a consultant use to create a segment for a birthday campaign that is evaluated daily?

- A. Is Birthday
- B. Is Between
- C. Is Today
- **D. Is Anniversary Of**

Answer: D

Explanation:

To create a segment for a birthday campaign that is evaluated daily, the consultant should use the Is Anniversary Of operator. This operator compares a date field with the current date and returns true if the month and day are the same, regardless of the year. For example, if the date field is 1990-01-01 and the current date is 2023-01-01, the operator returns true. This way, the consultant can create a segment that includes all the customers who have their birthday on the same day as the current date, and the segment will be updated daily with the new birthdays. The other options are not the best operators to use for this purpose because:

A . The Is Today operator compares a date field with the current date and returns true if the date is the same, including the year. For example, if the date field is 1990-01-01 and the current date is 2023-01-01, the operator returns false. This operator is not suitable for a birthday campaign, as it will only include the customers who were born on the same day and year as the current date, which is very unlikely.

B . The Is Birthday operator is not a valid operator in Data Cloud. There is no such operator available in the segment canvas or the calculated insight editor.

C . The Is Between operator compares a date field with a range of dates and returns true if the date is within the range, including the endpoints. For example, if the date field is 1990-01-01 and the range is 2022-12-25 to 2023-01-05, the operator returns true. This operator is not suitable for a birthday campaign, as it will only include the customers who have their birthday within a fixed range of dates, and the segment will not be updated daily with the new birthdays.

NEW QUESTION # 144

A retailer wants to unify profiles using Loyalty ID which is different than the unique ID of their customers. Which object should the consultant use in identity resolution to perform exact match rules on the Loyalty ID?

- A. Loyalty Identification object
- B. Individual object
- **C. Party Identification object**
- D. Contact Identification object

Answer: C

Explanation:

The Party Identification object is the correct object to use in identity resolution to perform exact match rules on the Loyalty ID. The Party Identification object is a child object of the Individual object that stores different types of identifiers for an individual, such as email, phone, loyalty ID, social media handle, etc. Each identifier has a type, a value, and a source. The consultant can use the Party Identification object to create a match rule that compares the Loyalty ID type and value across different sources and links the corresponding individuals.

The other options are not correct objects to use in identity resolution to perform exact match rules on the Loyalty ID. The Loyalty Identification object does not exist in Data Cloud. The Individual object is the parent object that represents a unified profile of an individual, but it does not store the Loyalty ID directly. The Contact Identification object is a child object of the Contact object that stores identifiers for a contact, such as email, phone, etc., but it does not store the Loyalty ID.
