After you purchase our SDLCSA learning materials, we will still provide you with excellent service. Our customer service is 24 hours online, you can contact us any time you encounter any problems. Of course, you can also send us an email to contact with us on the SDLCSA Study Guide. We will reply you the first time. As you know, there are many users of SDLCSA exam preparation. But we work high-efficiently 24/7 to give you guidance.

Free4Dump is a website that provide the counseling courses for IT professionals to participate in Supermicro certification SDLCSA exam and help them get the Supermicro SDLCSA certification. The courses of Free4Dump is developed by experienced experts' extensive experience and expertise and the quality is very good and have a very fast update rate. Besides, exercises we provide are very close to the real exam questions, almost the same. When you select Free4Dump, you are sure to 100% pass your first time to participate in the difficult and critical Supermicro Certification SDLCSA Exam.

## Liquid Cooling Service Associate (SDLCSA) Exam Valid Training Material

It is widely accepted that where there is a will, there is a way; so to speak, a man who has a settled purpose will surely succeed. To obtain the SDLCSA certificate is a wonderful and rapid way to advance your position in your career. In order to reach this goal of passing the SDLCSA exam, you need more external assistance to help yourself. We have engaged in this career for more than ten years and with our SDLCSA Exam Questions, you will not only get aid to gain your dreaming SDLCSA certification, but also you can enjoy the first-class service online.

### Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q10-Q15):

#### NEW QUESTION # 10

Before removing the LPIO board from the PCIe tray, what other component needs to be removed first?

- A. GPU tray
- B. Air shroud
- C. Metal bracket

- D. Motherboard tray

**Answer: C**

Explanation:

The LPIO (Low-Profile IO) board in Supermicro systems like the SYS-421GE-TNHR2-LCC, part of the PCIe tray, is typically secured by a metal bracket that must be removed first. This bracket holds the LPIO board and associated cables (e.g., BMC cable) in place, as seen in similar designs (e.g., SYS-420GP-TNAR). Removing it involves unscrewing (often 2 screws) and lifting it off, granting access to the LPIO board. A (GPU tray) is a separate assembly, C (motherboard tray) is unrelated to the PCIe tray's LPIO, and D (air shroud) covers components but doesn't secure the board. Supermicro's DLC systems emphasize modular access, making B the correct step. References: Supermicro PCIe tray service guides, DLC system IO component layouts.

#### NEW QUESTION # 11

What must be removed first, in order to remove the BMC cable and IO Module from the PCIe tray?

- A. The AOC cage
- B. The BMC cage
- C. The AOM cage
- D. The PCIe tray

**Answer: A**

Explanation:

The BMC (Baseboard Management Controller) cable and IO Module in Supermicro systems like the SYS-421GE-TNHR2-LCC are often tied to add-on cards (AOC) within the PCIe tray. The AOC cage (likely an Add-On Card cage) must be removed first to access these components, as it houses cards and cables interfacing with the BMC. Supermicro's design (e.g., SYS-420 series) places AOC cages as sub-assemblies within the PCIe tray, requiring removal before deeper access. A (AOM cage) may be a typo or misidentification, B (BMC cage) isn't standard terminology here, and C (PCIe tray) is too broad since it's the parent assembly. D fits Supermicro's DLC service hierarchy, making it correct. References: Supermicro PCIe tray sub-assembly guides, DLC system component access.

#### NEW QUESTION # 12

Which statement accurately describes the location of the motherboard tray in the chassis of the SYS-421GE-TNHR2-LCC system?

- A. Below the GPU tray
- B. Above the PCIe tray
- C. Above the GPU tray
- D. Below the PCIe tray

**Answer: D**

Explanation:

In Supermicro's SYS-421GE-TNHR2-LCC, the motherboard tray is below the PCIe tray, consistent with high-end server designs (e.g., SYS-420GP-TNAR). The motherboard tray houses CPUs and core components, while the PCIe tray (often with GPUs) sits above, connected via risers or direct slots. Options C and D reference a "GPU tray," likely a misnomer for the PCIe tray, but B remains accurate. Supermicro's DLC systems stack trays vertically for cooling efficiency, confirming B as correct. References: Supermicro chassis layout specs, DLC system tray configurations.

#### NEW QUESTION # 13

What part on the motherboard tray do you need to remove first, in order to remove the air shroud?

- A. The support bar in the middle of the motherboard tray
- B. The support bar at the front of the motherboard tray
- C. The support bar at the back of the motherboard tray
- D. There is no support bar on the motherboard tray that prevents you from removing the air shroud

**Answer: D**

Explanation:

In Supermicro systems like the SYS-421GE-TNHR2-LCC, the air shroud on the motherboard tray is typically a lift-off component not obstructed by a support bar. Unlike some designs with structural bars, Supermicro's high-end servers (per manuals like SYS-420GP-TNAR) often feature open tray layouts for easy access, especially in DLC configurations where liquid cooling reduces reliance on complex air channels. Options A, B, and C assume a bar exists and must be removed, but no such requirement is standard. The shroud lifts off after screw removal, making D correct. Supermicro's DLC design simplifies maintenance, supporting this conclusion. References: Supermicro motherboard tray documentation, DLC system accessibility features.

#### NEW QUESTION # 14

Before the fan board can be removed from the motherboard tray, all 4 of the fans' power connectors must be disconnected. True or False.

- A. False
- **B. True**

**Answer: B**

Explanation:

In Supermicro systems like the SYS-421GE-TNHR2-LCC, the fan board connects multiple fans (often 4 in high-end setups) to the motherboard tray. Removing the fan board requires disconnecting all 4 fans' power connectors first to avoid damage or electrical hazards, a standard step in Supermicro's service guides (e.g., SYS-420GP-TNAR). Even in DLC systems, where liquid cooling dominates, fans supplement air cooling, and their power must be safely disconnected. True (A) reflects Supermicro's safety and maintenance protocols, making it correct over B.
