You can pass UiPath Automation Developer Associate v1 Exam on the off chance that you use UiPath UiPath-ADAv1 Dumps material. Not withstanding zeroing in on our material, expecting that you went after in the UiPath UiPath-ADAv1 exam, you can guarantee your cash back as per systems.

UiPath Automation Developer Associate v1 Exam Sample Questions (Q324-Q329):

NEW QUESTION # 324

Once "Library A" has been imported as a dependency in the current project, how can the UI Object Repository defined in "Library A" be accessed?

- A. The Object Repository cannot be passed between a Process and a Library.
- B. The Object Repository needs to be exported as a UI Library and imported in the Process for it to become available.
- **C. The Object Repository will automatically be available in the Process.**
- D. The Object Repository is only available in a Library.

Answer: C

Explanation:

The UI Object Repository is a feature that allows you to store and reuse UI elements across different automation projects¹. A UI Library is a type of project that contains UI elements and workflows that can be used as dependencies in other projects². When you import a UI Library as a dependency in your current project, the UI Object Repository defined in the UI Library will automatically be available in your current project³. You can access the UI elements from the Object Repository panel in Studio and use them in your activities⁴. Therefore, the correct answer is C. The other options are incorrect because they do not reflect the actual behavior of the UI Object Repository and the UI Library.

References: Object Repository documentation, Reusing Objects and UI Libraries documentation, Object Repository course, [Object Repository in Studio course].

NEW QUESTION # 325

In the context of the REFramework, if the OrchestratorQueueName key is present in both the Settings and Assets sheets, but an asset with the corresponding name is not present in Orchestrator, what will be the behavior at run time?

- A. An empty string will be saved for the "OrchestratorQueueName" key in the config dictionary.
- B. The flow will throw an exception in InitAllSettings workflow.
- C. The "OrchestratorQueueName" key is not added to the config dictionary and the flow will throw in Get Transaction Data workflow.
- **D. The flow will use the value from the Settings sheets since the asset is missing.**

Answer: D

Explanation:

The REFramework template is a robust and scalable framework for building RPA projects¹. It uses a config file to store the settings and constants that are used throughout the project². The config file has two sheets:

Settings and Assets. The Settings sheet contains the key-value pairs that are read by the InitAllSettings workflow and stored in the config dictionary. The Assets sheet contains the names of the assets that are stored in Orchestrator and need to be retrieved by the InitAllApplications workflow. The OrchestratorQueueName key is used to specify the name of the queue that is used to store the transaction items for the process. If the OrchestratorQueueName key is present in both the Settings and Assets sheets, but an asset with the corresponding name is not present in Orchestrator, the behavior at run time will be as follows:

* The InitAllSettings workflow will read the value of the OrchestratorQueueName key from the Settings sheet and store it in the config dictionary.

* The InitAllApplications workflow will try to retrieve the asset with the name OrchestratorQueueName from Orchestrator using the Get Asset activity. Since the asset does not exist, the activity will throw an exception.

* The exception will be caught by a Try Catch block and handled by a Log Message activity with level Warning and message "Asset not found: OrchestratorQueueName".

* The flow will continue with the next asset in the Assets sheet or move to the next state if there are no more assets.

* The flow will use the value of the OrchestratorQueueName key from the config dictionary whenever it needs to access or update the queue.

Therefore, option B is correct. Option A is incorrect because the exception is thrown in InitAllApplications workflow, not InitAllSettings workflow. Option C is incorrect because an empty string is not saved for the OrchestratorQueueName key in the

config dictionary. Option D is incorrect because the OrchestratorQueueName key is added to the config dictionary and the flow does not throw in Get Transaction Data workflow.

NEW QUESTION # 326

A developer loaded an existing workflow that uses UI Automation in Google Chrome. The Google Chrome extension has not been installed on the developer's machine How should the developer load the Google Chrome extension from UiPath Studio?

Instructions: Drag the Description found on the left and drop on the correct Step found on the right.

Description	Step Sequence
Click, "Tools" to see "UiPath Extensions"	Step 1
Navigate to "Home"	Step 2
Click, "Enable extension" in the Google Chrome confirmation pop-up.	Step 3
Select "Chrome" and then click, "Install"	Step 4

Answer:

Explanation:

Description	Step Sequence
Click, "Tools" to see "UiPath Extensions"	Step 1
Navigate to "Home"	Step 2
Click, "Enable extension" in the Google Chrome confirmation pop-up.	Step 3
Select "Chrome" and then click, "Install"	Step 4

Explanation:

The developer can load the Google Chrome extension from UiPath Studio by following these steps:

- * Step 1 = Navigate to Home in UiPath Studio. This is the section where you can create, open, or manage your projects.
- * Step 2 = Click Tools to see UiPath Extensions. This is the section where you can install or update various extensions for different applications or browsers.
- * Step 3 = Select Chrome and then click Install. This will launch the Chrome browser and redirect you to the Chrome Web Store page for the UiPath extension.
- * Step 4 = Click Enable extension in the Google Chrome confirmation pop-up. This will add the UiPath extension to your browser and allow you to use UI automation activities in Chrome.

NEW QUESTION # 327

What is the correct sequence of steps to install a new Activities package in UiPath Studio 2021 10?

Instructions:

Drag the Description found on the left and drop on the correct Step found on the right.

Description	Step Sequence
Click, All Packages	Step 1
In the Manage Packages window, click Save	Step 2
Click, Manage Packages	Step 3
Search and Install the desired package	Step 4

Answer:

Explanation:

Description	Step Sequence
Click, All Packages	Step 1
In the Manage Packages window, click Save	Step 2
Click, Manage Packages	Step 3
Search and Install the desired package	Step 4

Explanation:

- * Click, Manage Packages
- * In the Manage Packages window, click Save
- * Search and Install the desired package
- * Click, All Packages

The correct sequence of steps to install a new Activities package in UiPath Studio 2021 10 is:

- * Click Manage Packages in the ribbon.
- * In the Manage Packages window, click All Packages in the left panel.
- * Search for the desired package in the search box and select it from the list.
- * Click Install and then Save to complete the installation.

Comprehensive and Detailed Explanation: To install a new Activities package in UiPath Studio 2021 10, you need to follow these steps:

- * Click Manage Packages in the ribbon. This will open the Manage Packages window, where you can browse, install, update, or remove packages from your project.
- * In the Manage Packages window, click All Packages in the left panel. This will display all the available packages from the official UiPath feed, as well as any other feeds that you have configured in the Settings tab.
- * Search for the desired package in the search box and select it from the list. You can also filter the packages by category, compatibility, or source. You can see the package details, such as version, description, dependencies, and release notes, in the right panel.
- * Click Install and then Save to complete the installation. The package will be added to your project dependencies and downloaded to the local cache. You can also choose to install a specific version of the package by clicking on the version number and selecting from the drop-down list.

NEW QUESTION # 328

Review the following graphic:

Based on the graphic, what is the output at runtime?

- A. 00
- B. 20 23
- C. 0
- **D. 0 3**

Answer: D

Explanation:

- * The variable StrValue is assigned the string "2023".
- * The SplitResult variable stores the result of StrValue.Split("2"), which splits the string "2023" wherever the character '2' appears.
- * "2023" is split into parts: "" (before first 2), "0" (between 2s), and "3" (after last 2).
- * The For Each loop iterates over SplitResult and logs each element.
- * The output will be:
- * First element: "" (empty, ignored in output).
- * Second element: "0".
- * Third element: "3".

Thus, the logged output at runtime will be "0 3".

NEW QUESTION # 329

.....

There is no doubt that it is very difficult for most people to pass the exam and have the certification easily. If you are also weighted with the trouble about a UiPath-ADAv1 certification, we are willing to soothe your trouble and comfort you. We have compiled the UiPath-ADAv1 test guide for these candidates who are trouble in this exam, in order help they pass it easily, and we deeply believe that our UiPath-ADAv1 Exam Questions can help you solve your problem. Believe it or not, if you buy our study materials and take it seriously consideration, we can promise that you will easily get the certification that you have always dreamed of. We believe that you will never regret to buy and practice our UiPath-ADAv1 latest question.
