Pass4sure 101-500 Dumps Pdf & 101-500 Simulation Questions

There are many certificates for you to get but which kind of certificate is most authorized, efficient and useful? We recommend you the 101-500 certificate because it can prove that you are competent in some area and boost outstanding abilities. If you buy our 101-500 study materials you will pass the test smoothly and easily. We boost professional expert team to organize and compile the 101-500 Training Materials diligently and provide the great service which include the service before and after the sale, the 24-hours online customer service on our 101-500 exam questions.

Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which of the following examples for Bash file globbing matches a file named root-can-do-this.txt when used in the directory holding that file? (Choose three correct answers.)

- A. root*can*do??this.txt
- B. root***{can,may}-do-this.[tT][xX][tT]
- C. root*can?do-this.{txt,odt}
- D. r[oOoO]t-can-do*.txt
- E. {root,user,admin}-can-?-this.txt

Answer: B,C,E

Explanation:

The examples for Bash file globbing that match a file named root-can-do-this.txt are:

* root*can?do-this.{txt,odt}: This matches any file that starts with root, followed by any number of characters, followed by can,

followed by any single character, followed by do-this, followed by either .txt or .odt extension.

* {root,user,admin}-can-??-this.txt: This matches any file that starts with either root, user or admin, followed by a hyphen, followed by can, followed by any two characters, followed by -this, followed by .txt extension.

* root***{can,may}-do-this.[tT][xX][tT]: This matches any file that starts with root, followed by any number of characters, followed by either can or may, followed by -do-this, followed by any combination of t, T, x or X for the extension.

The examples that do not match are:

* r[oOoO]t-can-do*.txt: This matches any file that starts with r, followed by either o, O, o or O, followed by t-can-do, followed by any number of characters, followed by .txt extension. This does not match because the file name has only one o after r.

* rootcando??this.txt: This matches any file that starts with root, followed by any number of characters, followed by can, followed by any number of characters, followed by do, followed by any two characters, followed by this, followed by .txt extension. This does not match because the file name has a hyphen between do and this. References:

NEW QUESTION # 25

SIMULATION

Following the Filesystem Hierarchy Standard (FHS), where should binaries that have been compiled by the system administrator be placed in order to be made available to all users on the system?

Answer:

Explanation:

/usr/local/bin/

NEW QUESTION # 26

FILL BLANK

Which command displays a list of all background tasks running in the current shell? (Specify ONLY the command without any path or parameters.)

Answer:

Explanation:

jobs

NEW QUESTION # 27

What is the process ID number of the init process on a SysV init based system?

- A. It is different with each reboot.
- B. 0
- C. It is set to the current run level.
- D. 1
- E. 2

Answer: E

Explanation:

The process ID number of the init process on a SysV init based system is 1. The init process is the first process that runs on the system, and it is responsible for initializing the user-space environment and spawning all other processes. The init process is always the first process that runs on the system, and it has the process ID (PID) of 1. The PID is a unique identifier for each process on the system, and it is assigned by the kernel.

The PID of the init process is always 1, regardless of the reboot or the run level. You can verify the PID of the init process by using the ps command, which shows information about the processes on the system. For example, to show the PID, the user, the command, and the arguments of the init process, use the following command:

ps -p 1 -o pid,user,cmd

The output of the command will show something like:

PID USER CMD 1 root /sbin/init

This shows that the init process has the PID of 1, the user of root, and the command of /sbin/init.

NEW QUESTION # 28

What is the purpose of the Filesystem Hierarchy Standard?

- A. It provides unified tools to create, maintain and manage multiple filesystems in a common way.
- B. It is a security model used to ensure files are organized according to their permissions and accessibility.
- C. It defines a common internal structure of inodes for all compliant filesystems.
- **D. It is a distribution neutral description of locations of files and directories.**

Answer: D

NEW QUESTION # 29
