# Exams Information-Technology-Management Torrent, Exam Information-Technology-Management Simulator Online

Currently, if you want to make Information-Technology-Management exam certification more tied to your status in the IT industry with fierce competition, and make professional competence stronger in the IT industry, you can choose our RealExamFree's Information-Technology-Management Exam Training materials. With efforts for many years, the passing rate of RealExamFree's Information-Technology-Management certification exam has reached as high as 100%. Choosing RealExamFree means to choose success.

## WGU Information Technology Management QGC1 Sample Questions (Q52-Q57):

NEW QUESTION # 52
What is a goal of IT compliance programs?

- A. To focus compliance on cutting operational costs
- B. To reduce audits by limiting documentation
- C. To align IT practices with laws and standards
- D. To automate daily IT tasks for efficiency

**Answer: C**

Explanation:
The goal of IT compliance programs is to ensure that organizational IT operations align with external laws, regulatory requirements, and industry standards. Compliance frameworks (such as SOX, HIPAA, PCI DSS, or GDPR) define how organizations must manage data, privacy, and security. Achieving compliance demonstrates responsible practices and mitigates legal and financial risks.
Option B: Incorrect-compliance requires more documentation and transparency, not less.
Option C: Incorrect-compliance is not primarily about cost cutting.
Option D: Incorrect-automation may support compliance, but efficiency is not the core compliance goal.
Thus, the primary goal is alignment of IT practices with laws and standards.
Reference:
WGU Information Technology Management - IT Governance and Compliance, section on Compliance Programs and Goals.

NEW QUESTION # 53
What is a method for confirming users' identities?

- A. Authorization
- B. Public key encryption
- C. Authentication
- D. Information secrecy

**Answer: C**

NEW QUESTION # 54
Which IT practice supports green computing?

- A. Recycling old hardware before it reaches end of life
- B. Extending device life with reuse and refurbishment
- C. Prioritizing high performance for faster task completion
- D. Choosing hardware that is economical

**Answer: B**

Explanation:
Green computing practices aim to reduce environmental impact by lowering energy use, minimizing e-waste, and extending hardware life cycles. One of the most effective practices is to extend device life through reuse and refurbishment. This prevents premature disposal, reduces demand for new hardware manufacturing, and lowers overall environmental impact.
Option B: Incorrect-prioritizing high performance can increase energy consumption and is not necessarily sustainable.

Option C: Incorrect-economical hardware does not always mean environmentally sustainable.
Option D: Incorrect-recycling is important, but refurbishment and reuse extend usable life and reduce waste earlier.
Thus, the IT practice that best supports green computing is extending device life with reuse and refurbishment.
Reference:
WGU Information Technology Management - IT Sustainability and Green Computing, section on Extending Equipment Life.

## NEW QUESTION # 55
What is the goal of the maintenance phase in the system development life cycle (SDLC)?

- A. To fix defects and update the software
- B. To conduct unit testing and receive feedback
- C. To design and deploy the software architecture
- D. To gather initial business requirements

**Answer: A**

Explanation:
In the maintenance phase of the SDLC, the goal is to ensure the system continues to meet business needs by fixing defects, applying updates, and implementing enhancements. This phase ensures the system remains secure, reliable, and effective after deployment.
Option B: Gathering requirements occurs in the planning/analysis phase.
Option C: Unit testing is part of the testing phase, not maintenance.
Option D: Designing and deploying the architecture occurs in development and implementation phases.
Thus, the goal of the maintenance phase is to fix defects and update the software.
Reference:
WGU Information Technology Management - Systems Development Life Cycle, section on Maintenance Phase.

## NEW QUESTION # 56
What is a primary purpose of using prototypes in the business analysis process?

- A. To replace user manuals with interactive simulations
- B. To model requirements and gather early feedback from stakeholders
- C. To develop the back-end code of the final product
- D. To finalize the visual design and branding of the product

**Answer: B**

Explanation:
Prototypes are used in business analysis to model system requirements and gather early feedback from stakeholders. They provide a tangible representation of requirements, allowing users to visualize and test functionality before full-scale development begins.
Option A: Coding the back end is not the purpose of a prototype.
Option B: User manuals and simulations come later in training or documentation.
Option D: Branding and visual design are separate from business analysis.
Thus, the purpose of prototypes is to model requirements and gather early feedback from stakeholders.
