APICS Certified Supply Chain Professional Sample Questions (Q282-Q287):

NEW QUESTION # 282
What is the inventory turnover for a company with the following financial data?

Total revenue:	$34,452,000
Cost of goods sold	$14,181,000
Net receivable	$1,767,000
Inventory	$7,411,000

- A. 1.91
- B. 4.64
- C. 19.50
- D. 8.03

Answer: A

Explanation:
Inventory Turnover = COGS/Inventory = 14,181,000/7,411,000 = 1.91

NEW QUESTION # 283
Which of the following circumstances must exist to implement a warehouse management system (WMS)?

- A. The facility must be able to put away product and identify the physical product location
- B. The warehousing and enterprise resources planning (ERP) systems must directly interact
- C. The warehouse must utilize a random location system
- D. The facility must have implemented radio frequency identification (RFID)

Answer: A

Explanation:
Implementing a Warehouse Management System (WMS) requires certain operational capabilities. The essential condition is that the facility must be able to put away product and identify the physical product location:
* Product Put Away and Location Identification: A WMS relies on accurate tracking of product locations within the warehouse.
This capability is crucial for inventory management, order fulfillment, and efficient warehouse operations.
* Random Location System: While beneficial, it is not mandatory for WMS implementation.
* RFID: Not a prerequisite, though it can enhance WMS functionality.
* ERP Interaction: Integration with ERP systems is common but not a strict requirement for WMS implementation.

NEW QUESTION # 284
Which mode of long distance transportation would cost the least per ton mile?

- A. Water
- B. Truck
- C. Rail
- D. Air

Answer: A

Explanation:
Water transportation, particularly via ships, is generally the most cost-effective mode of long-distance transportation when measured in cost per ton-mile. Here's why:
* Economies of Scale: Ships can carry massive quantities of cargo, which reduces the cost per ton-mile compared to other modes of transport.
* Fuel Efficiency: Water transport is more fuel-efficient per ton-mile than air, truck, or rail, translating into lower costs.
* Infrastructure Costs: The natural waterways and ports, once established, do not require as much ongoing maintenance as roads or railways, further reducing costs.
* Long Distance Capability: Ships can travel long distances without the need for frequent stops or transfers, making them more economical for intercontinental shipments.

NEW QUESTION # 285
Cash-to-cash cycle time is a measure of a firm's:

- A. total supply chain accounts receivable
- B. agility to meet changing customer requirements
- C. responsiveness to customer's requirements
- D. working capital utilization

Answer: D

Explanation:

Cash-to-cash cycle time is a critical measure of a firm's working capital utilization. It calculates the time taken between outlaying cash for raw materials and receiving cash from product sales. Key points include:

* Definition: Cash-to-cash cycle time = Days of Inventory Outstanding + Days Sales Outstanding - Days Payable Outstanding.
* Working Capital Efficiency: It measures how efficiently a company is managing its working capital.
Shorter cycles indicate better utilization of cash resources.
* Impact on Liquidity: A shorter cash-to-cash cycle improves liquidity, as the company can quickly turn its inventory into cash.
* Operational Performance: This metric reflects overall operational efficiency, including procurement, production, and sales processes.
