Free PDF 2025 C-TS470-2412: Useful Vce SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Free

Test your knowledge of the SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C-TS470-2412) exam dumps with DumpsTests SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C-TS470-2412) practice

questions. The software is designed to help with SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C-TS470-2412) exam dumps preparation. SAP C-TS470-2412 practice test software can be used on devices that range from mobile devices to desktop computers.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q12-Q17):

NEW QUESTION # 12

What can you display in the app Find Technical Object? Note: There are 3 correct answers to this question.

- A. Planned and call dates for recurring service activities
- B. Service costs of the technical objects
- C. Measurement documents and measuring points of the technical objects
- D. Installation information of the technical objects
- E. System and user statuses of the technical objects

Answer: C,D,E

Explanation:

The Find Technical Object app in SAP S/4HANA Cloud Private Edition, Service provides details about technical objects (e.g., equipment, functional locations). The correct answers are A, B, C. Let's explore.

App Functionality:

This Fiori app allows users to search and view technical object data.

- * Installation information (A): Shows where the object is installed (e.g., functional location hierarchy).
- * Measurement documents and measuring points (B): Displays recorded measurements (e.g., temperature) and their points.
- * System and user statuses (C): Lists statuses (e.g., "INST" for installed, user status "In Repair").

Why Not the Others?

- * D: Service costs are in financial apps (e.g., Service Actuals), not this app.
- * E: Planned/call dates are in maintenance plan apps, not here.

Example:

Search equipment "E001" # See installation (FL-001), measuring point (Temp), status (INST).

"The Find Technical Object app displays installation information, measurement documents and points, and system/user statuses."

NEW QUESTION # 13

Which of the following are features of the clean core dashboard? Note: There are 2 correct answers to this question.

- A. Customers can use the dashboard in the dev, test, and production tenants.
- B. Customers can grant access to the dashboard to partners.
- C. It can be accessed by using SAP For Me.
- D. It can be used in all SAP S/4HANA Cloud editions.

Answer: B,C

Explanation:

The Clean Core Dashboard is a tool provided by SAP to help customers monitor and maintain a clean core strategy in their SAP S/4HANA systems. A clean core approach ensures that the ERP system remains up-to-date, cloud-compliant, and free of unnecessary modifications, facilitating smooth upgrades and innovation adoption. This dashboard provides insights into system customizations, extensions, and compliance with clean core principles. Let's evaluate each option based on official SAP documentation and functionality as of March

2025:

- * A. Customers can use the dashboard in the dev, test, and production tenants: The Clean Core Dashboard is primarily designed to monitor the clean core compliance of productive SAP S/4HANA systems, as its purpose is to provide actionable insights into the live environment where business processes are executed. While development (dev) and test tenants are critical for building and validating extensions, the dashboard's focus is on the production tenant to ensure operational stability and upgrade readiness. SAP documentation specifies that it targets productive systems (e.g., SAP S/4HANA Cloud Private Edition production tenants), and there's no explicit mention of it being available across all tenant types (dev, test, production) in a unified manner. Thus, this option is not a confirmed feature.
- * B. It can be accessed by using SAP for Me: This is a key feature of the Clean Core Dashboard. SAP for Me is SAP's customer portal, providing a centralized interface for accessing various tools, services, and insights related to SAP solutions. The Clean Core Dashboard is integrated into SAP for Me, offering customers a user-friendly way to view tiles and reports on their system's clean

core status (e.g., custom code usage, API compliance, and extension metrics). This accessibility aligns with SAP's strategy to consolidate customer-facing tools in a single portal, making it a verified feature.

* C. Customers can grant access to the dashboard to partners: This is another confirmed feature. SAP allows customers to share access to the Clean Core Dashboard with implementation partners or service providers via SAP for Me's authorization management. This capability supports collaboration, enabling partners to assist in analyzing and optimizing the system for clean core compliance (e.g., during RISE with SAP engagements). The dashboard's design facilitates transparency and joint efforts between customers and partners, making this a standard feature in the private cloud context.

* D. It can be used in all SAP S/4HANA Cloud editions: This is not entirely accurate. The Clean Core Dashboard is specifically tailored for SAP S/4HANA Cloud Private Edition and, to some extent, SAP S/4HANA on-premise systems, where customizations and extensions are more prevalent and need monitoring. In SAP S/4HANA Cloud Public Edition, the system is inherently clean by design (no source code modifications are allowed, only extensions via SAP BTP or in-app tools), reducing the need for such a dashboard. While clean core principles apply across all editions, the dashboard's functionality is most relevant to Private Edition and on-premise deployments, where customers have greater control over customizations. SAP documentation highlights its use in Private Edition contexts (e.g., RISE with SAP), not universally across all editions.

The correct answers, B and C, reflect the dashboard's accessibility via SAP for Me and its collaborative feature with partners, as outlined in SAP's clean core strategy resources. These features enhance its utility in maintaining a modern, flexible, and cloud-compliant ERP system, particularly in SAP S/4HANA Cloud Private Edition.

Extract from SAP Documentation: "The Clean Core Dashboard, accessible via SAP for Me, provides transparency on system customizations and allows customers to collaborate with partners to ensure clean core compliance in productive SAP S/4HANA Cloud Private Edition systems." (SAP Community, 10 Steps to Clean Core for SAP S/4HANA Cloud Private Edition for Customers, 2024).

NEW QUESTION # 14

Which options are available for defining your organizational structure in SAP S/4HANA Cloud Private Edition, Service? Note: There are 2 correct answers to this question.

- A. Enterprise Organizational Model
- B. Organizational Management (Legacy)
- C. Maintenance and Service Planning
- D. Enterprise Service Organization

Answer: A,D

Explanation:

SAP S/4HANA Cloud Private Edition, Service provides specific frameworks for defining organizational structures:

* Enterprise Organizational Model: This is the modern, integrated approach in S/4HANA to define organizational units (e.g., company codes, plants, service organizations) for service processes.

* Enterprise Service Organization: This specifically refers to the service-specific organizational structure, including service organizations, teams, and employees, tailored for service management.

* Maintenance and Service Planning: This is a process, not an organizational structure definition option.

* Organizational Management (Legacy): Refers to older SAP ERP HCM structures, not the primary method in S/4HANA Cloud Private Edition. These options are part of the organizational setup in SAP S/4HANA Service. "Define your organizational structure using the Enterprise Organizational Model and Enterprise Service Organization for service processes." (SAP Help Portal, Organizational Structure Setup).

NEW QUESTION # 15

Which of the following is a prerequisite to install a piece of equipment in a functional location?

- A. Set the installation flag for a functional location category
- B. Allow the combination of equipment category and object type to be installed in a functional location
- C. Allow the equipment category to be installed in a functional location
- D. Set the installation flag for a piece of equipment

Answer: C

Explanation:

To install equipment in a functional location in SAP S/4HANA:

* Allow the equipment category to be installed in a functional location: The equipment category (e.g., M for machines) must be

configured to permit installation (set in transaction OIEQ), ensuring compatibility with functional locations.

* Combination of equipment category and object type: Object types are for classification, not installation prerequisites.

* Installation flag for equipment/functional location: No such flags exist; installation is controlled by category settings. This is part of equipment management setup. "The equipment category must allow installation in a functional location as a prerequisite." (SAP Help Portal, Equipment Installation).

NEW QUESTION # 16

Which of the following can be assigned to a serial number profile?

- A. Equipment class
- B. Stock determination strategy
- C. Configuration profile
- **D. Equipment category**

Answer: D

Explanation:

A serial number profile in SAP S/4HANA defines how serial numbers are managed for materials or equipment. The correct answer is equipment category (C). Let's explore this deeply.

Serial Number Profile Purpose:

It controls serialization (e.g., mandatory entry, stock check) and links to objects like equipment or materials.

Why Equipment Category?

The equipment category (e.g., "M" for machines) determines the type of equipment created when a serialized material is installed or tracked. In customizing (SPRO # Plant Maintenance # Master Data # Technical Objects # Serial Number), the serial number profile is assigned to an equipment category to define how serial numbers generate equipment records (e.g., automatically upon goods receipt).

Why Not the Others?

* Equipment class (A): Classes group equipment by characteristics, not assigned to serial profiles.

* Configuration profile (B): This is for configurable products, unrelated to serial numbers.

* Stock determination strategy (D): This controls stock selection, not serialization.

Example:

Serial profile "S001" is assigned to equipment category "M," ensuring that serialized pumps create equipment records of type "M."
"A serial number profile can be assigned to an equipment category to define the equipment type created for serialized objects."

NEW QUESTION # 17

.....

About the dynamic change of our C-TS470-2412 guide quiz, they will send the updates to your mailbox according to the trend of the exam. Besides, we understand you may encounter many problems such as payment or downloading C-TS470-2412 practice materials and so on, contact with us, we will be there. Our employees are diligent to deal with your need and willing to do their part 24/7. They always treat customers with courtesy and respect to satisfy your need on our C-TS470-2412 Exam Dumps.
