Decision making: Establishing clear processes for how decisions are made regarding cloud resource usage, security measures, and compliance strategies.

Prioritization: Ensuring that critical security and compliance risks are prioritized and addressed first.

NEW QUESTION # 264

Which cloud deployment model involves a cloud and a datacenter, bound together by technology to enable data and application portability?

- A. Private cloud
- **B. Hybrid cloud**
- C. Public cloud
- D. Multi-cloud

Answer: B

Explanation:

The hybrid cloud deployment model involves integrating a private cloud (or on-premises datacenter) with a public cloud, bound together by technology that enables data and application portability. This allows workloads to move seamlessly between environments, leveraging the benefits of both private and public clouds.

From the CCSK v5.0 Study Guide, Domain 1 (Cloud Computing Concepts and Architectures), Section 1.3:

"A hybrid cloud combines on-premises infrastructure (or a private cloud) with a public cloud, integrated through technology that allows data and application portability. This model enables organizations to maintain sensitive workloads on-premises while leveraging the scalability of public cloud services." Option A (Hybrid cloud) is the correct answer.

Option B (Public cloud) is incorrect because it involves only cloud provider resources, not a datacenter.

Option C (Multi-cloud) is incorrect because it refers to using multiple public cloud providers, not a datacenter.

Option D (Private cloud) is incorrect because it does not inherently include integration with a public cloud.
