

VCE ISTQB-CTFL Exam Simulator | New ISTQB-CTFL Study Guide

P.S. Free & New ISTQB-CTFL dumps are available on Google Drive shared by Itcertkey: <https://drive.google.com/open?id=1J8QdnV091xPZT0wZxlEwKrnkUzgXCWYr>

We can find that the Internet is getting closer and closer to our daily life and daily work. We can hardly leave the Internet now, we usually use computer or iPad to work and learn. Inevitably, we will feel too tired if we worked online too long. You can see our ISTQB-CTFL exam materials have three version, including PDF version, APP version and soft version, the PDF version support printing. You can free download part of ISTQB-CTFL simulation test questions and answers of ISTQB-CTFL exam dumps and print it, using it when your eyes are tired. It is more convenient for you to look and read while protect our eye. If you print the ISTQB-CTFL exam materials out, you are easy to carry it with you when you out, it is to say that will be a most right decision to choose the ISTQB-CTFL, you will never regret it.

We also offer a free demo version that gives you a golden opportunity to evaluate the reliability of the ISTQB-Foundation Level Exam (ISTQB-CTFL) exam study material before purchasing. Vigorous practice is the only way to ace the ISTQB-Foundation Level Exam (ISTQB-CTFL) test on the first try. And that is what Itcertkey ISTQB ISTQB-CTFL practice material does. Each format of updated ISTQB-CTFL preparation material excels in its way and helps you pass the ISTQB-CTFL examination on the first attempt.

New ISTQB-CTFL Study Guide & ISTQB-CTFL Actual Test

Most people define ISTQB-CTFL study tool as regular books and imagine that the more you buy, the higher your grade may be. It is true this kind of view make sense to some extent. However, our ISTQB-CTFL real questions are high efficient priced with reasonable amount, acceptable to exam candidates around the world. Our ISTQB-CTFL practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. Unlike those untenable practice materials in the market, our ISTQB-CTFL practice materials are highly utilitarian for their accuracy of the real exam because all content are compiled by proficient experts who engaged in this area more than ten years. It is our unswerving will to help you pass the exam by ISTQB-CTFL study tool smoothly.

ISTQB-Foundation Level Exam Sample Questions (Q260-Q265):

NEW QUESTION # 260

Out of the following, what is not needed to specify in defect report?

- A. Severity and priority
- B. How to fix the defect
- C. How to reproduce the defect
- D. Test environment details

Answer: B

Explanation:

A defect report is a document that records the details of a defect found during testing. A defect report typically contains the following items:

- * Identifier: A unique identifier for the defect report
- * Summary: A concise summary of the defect
- * Description: A detailed description of the defect, including the steps to reproduce it, the expected and actual results, and any relevant screenshots or logs
- * Severity: The degree of impact that the defect has on the system
- * Priority: The level of urgency for resolving the defect
- * Status: The current state of the defect, such as new, open, resolved, closed, etc.
- * Resolution: The action taken to resolve the defect, such as fix, workaround, reject, etc. Out of these items, the one that is not needed to specify in a defect report is how to fix the defect. How to fix the defect is a technical solution that is usually determined by the developer who is assigned to resolve the defect. How to fix the defect is not part of the defect report, but rather part of the code change or patch that is delivered to fix the defect. The other items are needed to specify in a defect report, as they provide essential information for identifying, tracking and resolving defects. NEW QUESTION # 261

Which of the following is a correct reason to apply test automation?

- A. When there are a lot of repetitive testing tasks
- B. When it is easy to automate
- C. When it is cheap to buy test automation tools
- D. When a new test automation tool is launched

Answer: A

Explanation:

A correct reason to apply test automation is when there are a lot of repetitive testing tasks. Test automation is the use of software tools or scripts to perform or support testing activities, such as test case execution, test result comparison, test data generation, etc. Test automation can be beneficial when there are a lot of repetitive testing tasks that need to be performed frequently or consistently, such as regression testing, performance testing, load testing, etc. Test automation can help to save time and effort, increase reliability and accuracy, and improve coverage and efficiency of testing. The other options are not correct reasons to apply test automation. When a new test automation tool is launched is not a reason to apply test automation, but rather a factor for choosing a test automation tool. When it is easy to automate is not a reason to apply test automation, but rather a factor for evaluating the feasibility of test automation. When it is cheap to buy test automation tools is not a reason to apply test automation, but rather a factor for estimating the cost and benefit of test automation. NEW QUESTION # 262

A mid-size software product development company has analyzed data related to defects detected in its product and found out that defects fixed in earlier builds are getting re-opened after a few months.

The company management now seeks your advice in order to reverse this trend and prevent re-opening of defects fixed earlier.

What would be your FIRST recommendation to the company?

- A. Analyze the product modules containing maximum defects, and get them thoroughly tested and defects fixed as a one-time activity
- B. If required, train the teams responsible for development and testing of the modules containing maximum number of defects, and if this does not help, replace them with more knowledgeable people
- C. Verify existing regression test suite are adequate, and augment it, if required, in order to ensure that defects fixed earlier get re-tested in each subsequent build
- D. Automate existing test suits so that lesser time is spent on execution of each test, and more tests can be executed in the available time thus leading to a lower probability of defects slipping by

Answer: C

Explanation:

Regression testing is a type of testing that verifies that previously tested software still performs correctly after changes. Regression testing can help prevent re-opening of defects fixed earlier by ensuring that they do not cause any new failures or side effects. The

first recommendation to the company is to verify existing regression test suite are adequate, and augment it, if required, in order to ensure that defects fixed earlier get re-tested in each subsequent build. This can help improve the coverage and effectiveness of regression testing and detect any regression defects as soon as possible. Automating existing test suites may also help reduce the time and effort required for regression testing, but this is not the first recommendation, as automation may not be feasible or cost-effective for all test cases. Analyzing the product modules containing maximum defects and getting them thoroughly tested and defects fixed as a one-time activity may also help reduce the defect density and improve the quality of those modules, but this is not the first recommendation, as it does not address the root cause of re-opening defects fixed earlier. Training or replacing the teams responsible for development and testing of the modules containing maximum number of defects may also help improve their skills or performance, but this is not the first recommendation, as it may not be necessary or appropriate for all teams. NEW QUESTION # 263

The acceptance criteria associated with a user story:

- A. must be written in one of the two following formats: scenario-oriented or rule-oriented
- B. are often documented following in rule-oriented format using the following template: "As a [role], I want [feature], so that I can [benefit]"
- C. are often written in a rule-oriented format using the template referred to as "Given/When/Then"
- D. can be written in different formats and represent an aspect of a user story referred to as confirmation' of the so called "3 C's"

Answer: D

Explanation:

The acceptance criteria associated with a user story are the conditions that must be met for the user story to be considered done and to deliver the expected value to the user. They are often written in different formats, such as rule-oriented, scenario-oriented, or table-oriented, depending on the nature and complexity of the user story.

They represent an aspect of a user story referred to as confirmation, which is one of the so called "3 C's" of user stories. The other two aspects are card and conversation. Card refers to the concise and informal description of the user story, usually following the template: "As a [role], I want [feature], so that I can

[benefit]". Conversation refers to the ongoing dialogue between the stakeholders and the team members to clarify and refine the user story and its acceptance criteria. Therefore, option C is the correct answer.

NEW QUESTION # 264

Which statement is true regarding confirmation testing and regression testing?

- A. Confirmation testing is an optional activity whilst regression testing is not negotiable.
- B. TESTER Involvement is essential whilst running retesting and regression testing.
- C. Confirmation testing aims to verify that a defect has been resolved and regression testing ensuring that existing functionality still works after a change.
- D. Confirmation testing confirms the quality of the test being run while regression testing ensures that the software still works after a change has been made.
- E. Testers' involvement is essential whilst running retesting and regression testing.

Answer: C

Explanation:

Confirmation testing, also known as retesting, is conducted to verify that specific defects have been fixed.

Regression testing, on the other hand, is performed to ensure that recent changes have not adversely affected existing features of the software. Both types of testing are crucial for maintaining the integrity and quality of the software after modifications.

NEW QUESTION # 265

.....

To be the best global supplier of electronic ISTQB-CTFL study materials for our customers through innovation and enhancement of

our customers' satisfaction has always been our common pursuit. The advantages of our ISTQB-CTFL guide dumps are too many to count. And the most important point is that the pass rate of our ISTQB-CTFL learning quiz is pretty high as 98% to 99%. I guess this is also the candidates care most as well. You can totally trust in our ISTQB-CTFL exam questions!
