High Quality JN0-232 Guide Torrent: Security, Associate (JNCIA-SEC) Help You Get Certification - VCEDumps

With many advantages such as immediate download, simulation before the real test as well as high degree of privacy, our JN0-232 actual exam survives all the ordeals throughout its development and remains one of the best choices for those in preparation for exams. Many people have gained good grades after using our JN0-232 real test, so you will also enjoy the good results. Don't hesitate any more. Time and tide wait for no man. If you really long for recognition and success, you had better choose our JN0-232 exam demo since no other exam demo has better quality than our JN0-232 training questions.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q30-Q35):

NEW QUESTION #30

Which two statements are correct about security zones and functional zones? (Choose two.)

- A. Traffic entering an interface in a functional zone can exit any other transit interface.
- B. Traffic entering an interface in a functional zone cannot exit any other transit interface.
- C. Traffic entering transit interfaces can exit an interface in a functional zone.
- D. Traffic entering transit interfaces cannot exit an interface in a functional zone.

Answer: B,D

Explanation:

- * Functional zones(e.g., junos-host, management, null) are not used for forwarding transit traffic. They are used to manage traffic destined to or from the SRX device itself.
- * Option A:Correct. If traffic enters through a functional zone interface, it is meant for the SRX, not for transit, so it cannot exit another interface.
- * Option D:Correct. Transit interfaces handle forwarding traffic, but they cannot send that traffic out through a functional zone interface.
- st Option B and C:Incorrect, because functional zones are strictly control-plane, not transit forwarding zones. Correct Statements:A and D

Reference: Juniper Networks - Security Zones vs. Functional Zones, Junos OS Security Fundamentals.

NEW QUESTION #31

Which two statements are correct about unified security policies on SRX Series Firewalls? (Choose two.)

- A. Unified security policies use the application identification (AppID) engine.
- B. Unified security policies with multiple matches use the most restrictive match.
- C. Unified security policies match applications before processing policy statements.
- D. Unified security policies can be zone-based or global.

Answer: A.D

Explanation:

Unified security policies integratetraditional zone-based policies withapplication-based policies. Their characteristics include:

- * Zone-based or global (Option B): Unified policies can be applied as either zone-specific or global policies.
- * AppID engine (Option C):They leverage the AppID engine for application identification, enabling fine-grained control at the application layer.
- * Policy matching (Option A):Policies are evaluated sequentially like standard security policies; applications are not matched before policy processing.
- * Multiple matches (Option D):If multiple policies could match, the first match applies (sequential order), not the "most restrictive." Correct Statements:B and C Reference:Juniper Networks Unified Security Policies and AppSecure Integration, Junos OS Security Fundamentals.

NEW QUESTION #32

Which two criteria would be used for matching in security policies? (Choose two.)

- A. source address
- B. applications
- C. interface name
- D. MAC address

Answer: A.B

Explanation:

Security policies in Junos OS match traffic based on specific criteria:

- * Source and destination addresses(Option B).
- * Application(Option D), which may be defined as services (e.g., tcp/80) or recognized through AppID.

Other options:

- * MAC addresses(Option A) are not used in policy matching, policies operate at Layer 3/4.
- * Interface name(Option C) is used in firewall filters, not in security policy definitions.

Correct Criteria:Source address and Applications

Reference: Juniper Networks - Security Policy Match Conditions, Junos OS Security Fundamentals.

NEW QUESTION #33

Which two statements about destination NAT are correct? (Choose two.)

- A. SRX Series Firewalls support interface-based destination NAT.
- B. Destination NAT enables hosts on a private network to access resources on the Internet.
- C. Destination NAT enables hosts on the Internet to access resources on a private network.
- D. SRX Series Firewalls support pool-based destination NAT.

Answer: C,D

Explanation:

- * Destination NAT purpose (Option C):Used to allow external hosts on the Internet to access internal /private resources (such as a web server in the DMZ). Destination NAT changes the destination IP of incoming traffic to match the internal server.
- * Pool-based NAT (Option D):SRX supports destination NAT pools, allowing multiple public IP addresses or ranges to be translated to internal servers.
- * Incorrect options:
- * Option A describessource NAT, not destination NAT.
- * Option B is incorrect because SRX does not support "interface-based" destination NAT.

Correct Statements:C and D

Reference: Juniper Networks - NAT Types and Configurations (Source, Destination, and Static), Junos OS Security Fundamentals.

NEW QUESTION #34

Which security policy action will cause traffic to drop and a message to be sent to the source?

- A. reject
- B. next-policy
- C. permit
- D. deny

Answer: A

Explanation:

Security policies on SRX support several actions:

- * Permit: Allows traffic to pass according to the rule.
- * Deny: Silently drops the traffic without notifying the source.
- * Reject:Drops the trafficand sends a TCP RST (for TCP) or ICMP unreachable (for UDP/other protocols)back to the source. This provides feedback to the sending host.
- * Next-policy: Allows policy chaining to evaluate the next policy set.

Therefore, the action that causes traffic to drop and a message to be sent to the source isreject.

Reference: Juniper Networks - Security Policy Actions, Junos OS Security Fundamentals.

NEW QUESTION #35
