

Verified Microsoft Test AZ-700 Dumps Free Strictly Researched by Microsoft Educational Trainers

2025 Latest ITPassLeader AZ-700 PDF Dumps and AZ-700 Exam Engine Free Share: <https://drive.google.com/open?id=14cRBQFnVUezMidaVjy6zpmL9wfXVYauD>

Our company is trying to satisfy every customer's demand. Of course, we also attach great importance on the quality of our AZ-700 real exam. Every product will undergo a strict inspection process. In addition, there will have random check among different kinds of AZ-700 Study Materials. The quality of our AZ-700 practice dumps deserves your trust.our products have built good reputation in the market. We sincerely hope that you can try our AZ-700 preparation guide.

The Microsoft AZ-700 exam is intended for individuals who have experience working with Azure technologies and have a good understanding of networking concepts. It is a rigorous exam that covers a wide range of topics, and it requires candidates to have hands-on experience with Azure networking solutions. AZ-700 exam is also designed to test the candidate's ability to design and implement networking solutions that are scalable and secure.

Microsoft AZ-700 Exam is designed for professionals who specialize in designing and implementing networking solutions in the Azure environment. AZ-700 exam is intended for individuals who have a deep understanding of Azure networking services, including virtual networking, load balancing, and network security. Candidates for the AZ-700 exam should also have experience with hybrid networking, network migration, and network automation.

Latest AZ-700 Training - AZ-700 Related Certifications

For years our team has built a top-ranking brand with mighty and main which bears a high reputation both at home and abroad. The sales volume of the AZ-700 study materials we sell has far exceeded the same industry and favorable rate about our products is approximate to 100%. Why the clients speak highly of our AZ-700 Study Materials? Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q20-Q25):

NEW QUESTION # 20

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
VNet1	Virtual network	Contains a subnet named Subnet1
Subnet1	Virtual subnet	Part of VNet1
NSG1	Network security group (NSG)	Linked to Subnet1
ASG1	Application security group	Not linked

Subshell contains Three virtual machines that host an app named App1. App1 is accessed by using the SFTP protocol. From NSG1, you configure an inbound security rule named Rule2 that allows inbound SFTP connections to ASG1. You need to ensure that the inbound SFTP connections are managed by using ASG1. The solution must minimize administrative

effort.

What should you do?

- A. From NSG1, modify the priority of Rule2.
- B. From Subnet1 create a subnet delegation.
- C. From ASG1, modify the role assignments.
- **D. From each virtual machine, associate the network interface to ASG1**

Answer: D

NEW QUESTION # 21

You have an Azure Web Application Firewall (WAF) v2 tier named AG1 on an Azure application gateway.

AG1 has a policy named Policy 1.

You need to add a custom rule to Policy 1. The rule must block all requests from IP addresses in a specific IP address range.

Which four PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Cmdlets

- New-AzApplicationGatewayFirewallPolicyExclusion
- New-AzApplicationGatewayFirewallMatchVariable
- New-AzApplicationGatewayFirewallCondition
- New-AzApplicationGatewayFirewallCustomRule
- Set-AzApplicationGatewayFirewallPolicy

Answer Area

-
-
-
-

Answer:

Explanation:

Cmdlets

- New-AzApplicationGatewayFirewallPolicyExclusion
- New-AzApplicationGatewayFirewallMatchVariable
- New-AzApplicationGatewayFirewallCondition
- New-AzApplicationGatewayFirewallCustomRule
- Set-AzApplicationGatewayFirewallPolicy

Answer Area

- New-AzApplicationGatewayFirewallMatchVariable
- New-AzApplicationGatewayFirewallCondition
- New-AzApplicationGatewayFirewallCustomRule
- Set-AzApplicationGatewayFirewallPolicy

Explanation:

Cmdlets

- New-AzApplicationGatewayFirewallPolicyExclusion

Answer Area

- New-AzApplicationGatewayFirewallMatchVariable
- New-AzApplicationGatewayFirewallCondition
- New-AzApplicationGatewayFirewallCustomRule
- Set-AzApplicationGatewayFirewallPolicy

NEW QUESTION # 22

You have an Azure virtual network named Vnet1 that contains two subnets named Subnet1 and Subnet2. Both subnets contain virtual machines. You create a NAT gateway named NATgateway1 as shown in the following exhibit.

Home > NAT gateways >

Create network address translation (NAT) gateway ...

Validation passed

Basics Outbound IP Subnet Tags Review + create

Basics

Subscription Subscription1

Resource group RG1

Name NATgateway1

Region North Europe

Availability zone

Idle timeout (minutes) 4

Outbound IP

Public IP address None

Public IP prefix (New) NATgateway1-prefix (28)

Subnets

Virtual network Vnet1

Subnets None

None

Microsoft

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

Answer Area

Microsoft

NATgateway1 can be linked to [answer choice].

only Vnet1
only GatewaySubnet
only Subnet1 or Subnet2
both Subnet1 and Subnet2
only Vnet1

NATgateway1 is assigned [answer choice].

0 IP addresses
0 IP addresses
1 IP address
2 IP addresses
16 IP addresses
28 IP addresses

Answer:

Explanation:

Answer Area

Microsoft

NATgateway1 can be linked to [answer choice].

only Vnet1
only GatewaySubnet
only Subnet1 or Subnet2
both Subnet1 and Subnet2
only Vnet1

NATgateway1 is assigned [answer choice].

0 IP addresses
0 IP addresses
1 IP address
2 IP addresses
16 IP addresses
28 IP addresses

Explanation

NATgateway1 can be linked to [answer choice].

only Vnet1

NATgateway1 is assigned [answer choice].

0 IP addresses

NEW QUESTION # 23

You need to provide connectivity to storage1. The solution must meet the PaaS networking requirements and the business requirements.

What should you include in the solution?

- A. Azure Traffic Manager
- B. Azure Front Door
- C. a service endpoint
- D. a private endpoint

Answer: C

Explanation:

Topic 2, Contoso Case Study 2

Overview

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Existing Environment:

Azure Network Infrastructure

Contoso has an Azure Active Directory (Azure AD) tenant named contoso.com.

The Azure subscription contains the virtual networks shown in the following table.

Name	Resource group	IP address space	Location	Peered with
Vnet1	RG1	10.1.0.0/16	West US	Vnet2, Vnet3
Vnet2	RG1	172.16.0.0/16	Central US	Vnet1, Vnet3, Vnet4
Vnet3	RG2	192.168.0.0/16	Central US	Vnet1, Vnet2
Vnet4	RG2	10.10.0.0/16	West US	Vnet2
Vnet5	RG3	10.20.0.0/16	East US	None

Vnet1 contains a virtual network gateway named GW1.

Azure Virtual Machines

The Azure subscription contains virtual machines that run Windows Server 2019 as shown in the following table.

Name	Connected to	Network security group (NSG)
VM1	Vnet1/Subnet1	NSG1
VM2	Vnet1/Subnet2	NSG2
VM3	Vnet2/Default	NSG3
VM4	Vnet3/Default	NSG4
VM5	Vnet4/SubnetA	NSG5

The NSGs are associated to the network interfaces on the virtual machines. Each NSG has one custom security rule that allows RDP connections from the internet. The firewall on each virtual machine allows ICMP traffic.

An application security group named ASG1 is associated to the network interface of VM1.

Azure Private DNS Zones

The Azure subscription contains the Azure private DNS zones shown in the following table.

Name	Location
zone1.contoso.com	Central US
zone2.contoso.com	West US

Zone1.contoso.com has the virtual network links shown in the following table.

Name	Virtual network	Auto registration
Link1	Vnet2	No
Link2	Vnet3	Yes

Other Azure Resources

The Azure subscription contains additional resources as shown in the following table.

Name	Type	Location
DB1	Azure SQL Database	West US
storage1	Azure Storage account	West US
Registry1	Azure Container Registry	Central US
KeyVault1	Azure Key Vault	Central US

Requirements:

Virtual Network Requirements

Contoso has the following virtual networks requirements:

- * Create a virtual network named Vnet6 in West US that will contain the following resources and configurations:

Two container groups that connect to Vnet6

Three virtual machines that connect to Vnet6

Allow VPN connections to be established to Vnet6

Allow the resources in Vnet6 to access KeyVault1, DB1, and Vnet1 over the Microsoft backbone network

- * The virtual machines in Vnet4 and Vnet5 must be able to communicate over the Microsoft backbone network.

- * A virtual machine named VM-Analyze will be deployed to Subnet1. VM-Analyze must inspect the outbound network traffic from Subnet2 to the internet.

Network Security Requirements

Contoso has the following network security requirements:

- * Configure Azure Active Directory (Azure AD) authentication for Point-to-Site (P2S) VPN users.

- * Enable NSG flow logs for NSG3 and NSG4.

- * Create an NSG named NSG10 that will be associated to Vnet1/Subnet1 and will have the custom inbound security rules shown in the following table.

Priority	Port	Protocol	Source	Destination	Action
500	3389	TCP	10.1.0.0/16	Any	Deny
1000	Any	ICMP	10.1.0.0/16	VirtualNetwork	Deny

- * Create an NSG named NSG11 that will be associated to Vnet1/Subnet2 and will have the custom outbound security rules shown in the following table.

Priority	Port	Protocol	Source	Destination	Action
200	3389	TCP	10.1.0.0/16	VirtualNetwork	Deny

NEW QUESTION # 24

You have an Azure subscription that contains the resources shown in the following table.
