QUESTION #1

The compliance team is requesting a Veeam engineer complete the following tasks on the backup environment:

1. All image-level backups are to be tested and validated
2. Recovery verification with a well-known malware scan
3. Send an email to the Veeam engineer with test results

What is the recovery verification function to meet this requirement?

- A. On-Demand Sandbox
- B. SureBackup
- C. Quick Migration
- D. SureReplica

Answer: B

Explanation:

SureBackup is the Veeam technology that allows you to verify the recoverability of backups. It can automatically verify the integrity of the backup, test it for malware (with the aid of third-party antivirus software), and send email notifications upon the completion of the job. This is accomplished by running the backups in an isolated environment called a Virtual Lab, without making any changes to the actual production environment. By using SureBackup, Veeam engineers can ensure that image-level backups are recoverable, can be verified against malware, and can report the results via email, thus meeting the compliance team's requests.

QUESTION #2

An engineer sets up a backup job with direct backup to the AWS S3. The retention of the job is set to 31 days and the immutable period is set to 31 days. However, one full backup data is not removed automatically after 60 days. Which option could be the reason for this?

- A. The backup job is disabled accidentally.
- B. The backup data is encrypted.
- C. It is an active full backup, not synthetic full.
- D. A retention exception is enabled for the restore point.

Answer: C

Explanation:

In active full backups, the entire dataset is backed up each time the backup job runs, whereas in synthetic full backups, only the changes since the last full backup are backed up. If the engineer configured the backup job to run active full backups instead of synthetic full backups, it's possible that the data from the full backup taken 60 days ago is still being retained as part of the regular backup process. Therefore, it hasn't been removed automatically after 60 days as expected.

QUESTION #3

An engineer is configuring Veeam Backup and Replication for an organization to protect a VMware environment using

If you are working all the time, and you hardly find any time to prepare for the Veeam VMCE_v12 exam, then DumpsKing present the smart way to Veeam VMCE_v12 exam prep for the exam. You can always prepare for the VMCE_v12 test whenever you find free time with the help of our VMCE_v12 Pdf Dumps. We have curated all the VMCE_v12 questions and answers that you can view the exam Veeam VMCE_v12 brain dumps and prepare for the VMCE_v12 exam. We guarantee that you will be able to pass the VMCE_v12 in the first attempt.

As is known to us that pass rate is one of the most important standards when candidate choose the practice materials. The pass rate is 98.95% for VMCE_v12 training materials, and you can pass and get a certificate successfully. In addition we also pass guarantee and money back guarantee if you fail to pass the exam after using VMCE_v12 Exam Dumps. Free update for one year is also available, namely in the following year, you can get latest information about the VMCE_v12 training materials. We also have online and offline chat service to solve your confusions.

Test VMCE_v12 Pattern, Latest VMCE_v12 Exam Forum

How can we occupy a place in a market where talent is saturated? The answer is a certificate. All kinds of the test certificationS, prove you through all kinds of qualification certificate, it is not hard to find, more and more people are willing to invest time and effort on the VMCE_v12 exam guide, because get the test VMCE_v12 Certification is not an easy thing, so, a lot of people are looking for an efficient learning method. And here, fortunately, you have found the VMCE_v12 exam braindumps, a learning platform that can bring you unexpected experiences.

Veeam VMCE_v12 Exam Syllabus Topics:

Topic	Details
Topic 1	• Risk scenarios: This section covers exploring various risk scenarios and identifying the type of risks we may face in the environment.
Topic 2	• Core components: This section of the exam covers exploring the functionality of Veeam Backup & Replication and system requirements.
Topic 3	• Verifying recoverability: This section of the exam covers the creation of automated tests to ensure recoverability from backups and replicas.
Topic 4	• Data protection strategies: This section of the exam covers an overview of data protection strategies.
Topic 5	• Recovery scenarios and features: This section covers the impact of various recovery procedures and choosing the most viable recovery technique.
Topic 6	• Incident Response Planning: This section of the exam covers integrating Veeam Backup and Replication into the incident response strategy.
Topic 7	• Initial security considerations: This section defines ways and tools to secure the Veeam backup server.
Topic 8	• Enacting a recovery: This section is about getting practice in recovering various recoveries with diverse data.
Topic 9	• Agent backup: This section of the exam covers the identification of protection groups for automating the installation of Veeam Agents.
Topic 10	• Replication: This section of the exam covers the description of use cases, architectures, and elements of replication jobs.
Topic 11	• Unstructured data backup: This section is about highlighting vital features required to protect unstructured data.
Topic 12	• Moving or copying backups: This section of the exam covers use cases for backup processes using VeeamMover.
Topic 13	• Virtual machine backup: This section of the exam covers protecting the VMware and Hyper V to safeguard VMware that follows SLAs.

Veeam Certified Engineer v12 Sample Questions (Q57-Q62):

NEW QUESTION # 57

A Veeam engineer needs to copy backup files from a Windows repository in Site A to a Linux repository in Site B. The WAN connection between the two sites is busy during business hours. The engineer needs to configure a backup copy job to accomplish this task.

Which feature of the backup copy job should be configured to avoid transferring data during business hours?

- A. Immediate copy
- B. WAN accelerator
- C. Backup Copy Window

- D. Periodic copy

Answer: C

Explanation:

In a scenario where a Veeam engineer needs to manage backup file transfers between two sites without impacting bandwidth during business hours, the most appropriate feature to configure in the backup copy job is D: Backup Copy Window. The Backup Copy Window setting in Veeam Backup & Replication allows for specifying the time frame during which the backup copy job is allowed to transfer data. By configuring this window to exclude business hours, the engineer can ensure that the backup copy job transfers data only during off-peak hours, thereby avoiding additional strain on the WAN connection when it is most needed for business operations. This approach provides the flexibility to balance the need for offsite backups with the practical bandwidth considerations of a busy WAN connection, ensuring that backup activities do not interfere with critical business functions.

NEW QUESTION # 58

An engineer is using Veeam Backup and Replication v12.

The only backup repository is a Microsoft Windows server with direct attached Fibre Channel storage array.

The engineer realizes that none of their backups are immutable. A second copy of the backup on a different site and a different media is required.

Which option should be used to provide immutable backups on a secondary site with a different media?

- A. Create a new hardened repository on a new Microsoft Windows Server, mark it as immutable and create a backup copy job on it.
- B. Create a Scale Out Backup Repository with the existing Microsoft Windows Server as the performance tier and Google Cloud Object Storage with immutability enabled as the capacity tier.
- **C. Create a Scale Out Backup Repository with the existing Microsoft Windows Server as the performance tier and AWS S3 bucket with immutability enabled as the capacity tier.**
- D. Create a Scale Out Backup Repository with the existing Microsoft Windows Server as the performance tier and an HPe StoreOnce Catalyst share with immutability enabled as the capacity tier.

Answer: C

Explanation:

To provide immutable backups on a secondary site with a different media, the best option given the context is B: Create a Scale Out Backup Repository (SOBR) with the existing Microsoft Windows Server as the performance tier and an AWS S3 bucket with immutability enabled as the capacity tier.

This approach involves leveraging the existing backup infrastructure (Microsoft Windows Server with direct-attached storage) as the performance tier of the SOBR, where the most recent backups are stored for fast access. For long-term storage and immutability, backups can be offloaded to an AWS S3 bucket configured with Object Lock. The Object Lock feature in AWS S3 provides an additional layer of data protection by making the backup data immutable, meaning it cannot be deleted or modified for a specified duration. This setup ensures that backup data is protected against accidental deletion, ransomware, and other malicious activities. By implementing this configuration, the engineer can achieve the desired level of data protection and immutability, utilizing cloud storage as a secure and scalable secondary backup location, distinct from the primary on-premises storage media.

NEW QUESTION # 59

A Veeam administrator is restoring a user object from Active Directory using the Veeam Explorer for Microsoft Active Directory. They want to restore the user object including the password. What options exist for restoring the object with a password? (Choose 2)

- A. Restore the user object to the source domain
- B. Send password to user account via email
- C. Show password
- D. Allow user to set password
- **E. Use "Restore objects to" and choose the "Restore password" option**

Answer: E

NEW QUESTION # 60

An administrator needs to create a strategy in advance of a disaster to ensure that applications can be started in a specific order. How can this be accomplished?

- **A. Failover plan**
- B. Application group
- C. Attach XML file to existing job with the VM start order
- D. Veeam ONE migration script

Answer: A

Explanation:

To ensure that applications can be started in a specific order in advance of a disaster, an administrator should use a Failover Plan in Veeam Backup and Replication. This feature allows for the creation of a predefined sequence for starting up VMs, ensuring that applications are brought online in the correct order during a disaster recovery scenario.

NEW QUESTION # 61

Which Veeam feature allows for an administrator to help ensure general data protection regulation (GDPR) compliance?

- **A. Secure restore**
- B. Immutability
- C. Veeam Business View
- D. Location tagging

Answer: A

Explanation:

Explanation

The Veeam feature that allows for an administrator to help ensure general data protection regulation (GDPR) compliance is Secure Restore. Secure Restore is an option that enables Veeam Backup & Replication to scan machine data with antivirus software before restoring the machine to the production environment. This way, the administrator can prevent malware infection or data leakage from the restored machine, which may violate the GDPR requirements. Secure Restore is available for various restore operations, such as Instant Recovery, Entire VM Restore, Virtual Disks Restore, and more¹. For more information on Secure Restore, see How to improve security with Veeam DataLabs Secure Restore.

NEW QUESTION # 62

.....

Our experts offer help by diligently working on the content of VMCE_v12 learning questions more and more accurate. Being an exam candidate in this area, we believe after passing the exam by the help of our VMCE_v12 practice materials, you will only learn a lot from this VMCE_v12 Exam but can handle many problems emerging in a long run. You can much more benefited from our VMCE_v12 study guide. Don't hesitate, it is worthy to purchase!
