Veeam Certified Engineer v12 Sample Questions (Q126-Q131):

NEW QUESTION # 126

Which feature can be used in Veeam Explorer for Microsoft Exchange?

- A. Restore databases from backups created with Veeam RMAN plug-in
- B. Export to BAK file
- C. Restore original password for account objects
- D. **Recover from litigation and in-place hold items**

Answer: D

Explanation:

Veeam Explorer for Microsoft Exchange allows recovery of items that are under litigation hold or in-place hold. This feature is essential for compliance and legal discovery processes where emails and other items need to be preserved and may be subject to eDiscovery requests. It is not used for restoring databases from backups created with Veeam RMAN plug-in, exporting to BAK files, or restoring original passwords for account objects.

NEW QUESTION # 127

A physical Linux file server needs to be migrated to VMware ESXi. The server has several volumes: /dev/sda (60GB), /dev/sdb (1TB) and /dev/sdc (4TB). What is the quickest option to migrate the server?

- A. Create an empty VM and perform bare metal recovery inside the VM.
- B. Export all disks, create an empty VM and attach the disks.
- C. Perform Instant Disk Recovery for each volume.
- D. **Perform Instant VM Recovery.**

Answer: D

Explanation:

Explanation

from https://helpcenter.veeam.com/docs/backup/agents/integration_instant_restore_vsphere.html?ver=120

"Restore to vSphere VM The procedure of Instant Recovery for a Veeam Agent computer practically does not differ from the same procedure for a VM. The main difference from Instant Recovery is that you do not need to select the recovery mode, because Veeam Agent computers are always restored to a new location."

NEW QUESTION # 128

A power outage on Site A is expected during the night. The disaster recovery strategy has been implemented (see diagram). What is the correct way to start replicated VMs on Site B to minimize data loss?

- A. Power on VMs manually through vCenter.
- B. Execute "Failover plan".
- C. Execute "Permanent failover" from vCenter.
- D. Execute "Planned failover".

Answer: D

Explanation:

A planned failover is a process that allows for the seamless switching from the original VMs at Site A to their replicas at Site B with no data loss. This is the correct course of action when a power outage is expected, as it is a controlled process that ensures that all data is synchronized before the switch is made. This action minimizes data loss and ensures that the VMs on Site B are up-to-date.

NEW QUESTION # 129

What should be implemented when backing up NAS file shares to ensure there is more than one copy of the data?

- A. Archive repository
- B. Backup repository
- C. Cache repository
- D. Secondary copy

Answer: D

Explanation:

When backing up NAS file shares, it's essential to ensure that more than one copy of the data exists to adhere to best practices for data protection, often referred to as the 3-2-1 Rule (3 total copies of your data, 2 of which are local but on different devices, and at least 1 copy offsite). Implementing a secondary copy of the data provides this additional layer of redundancy. In Veeam, this can be achieved by creating backup copy jobs, which ensure that there is a secondary copy of the data, possibly stored in a different location. This is not to be confused with the simple use of backup repositories, which are storage locations for primary backups, or with cache/archive repositories which serve different purposes in the backup process.

NEW QUESTION # 130

A customer's NAS has multiple hardware failures, and the NAS is no longer accessible. All of the users are impacted as they need to access the NAS for day-to-day work.

Which restore method could minimize the service impact to the users?

- A. Rollback to a point in time
- B. Instant file share recovery
- C. Restore of files and folders
- D. Restore of the entire file share

Answer: B

Explanation:

Instant file share recovery is the most effective method to minimize service impact in this scenario. This feature allows users to instantly access the NAS data directly from the backup files without having to wait for the entire file share to be restored. This

approach is beneficial when quick access to data is crucial. References:
