Passing VMware 2V0-11.25 Score Feedback - 2V0-11.25 Reliable Test Bootcamp

2V0-11.25 real dumps revised and updated according to the syllabus changes and all the latest developments in theory and practice, our VMware Cloud Foundation 5.2 Administrator real dumps are highly relevant to what you actually need to get through the certifications tests. Moreover they impart you information in the format of 2V0-11.25 Questions and answers that is actually the format of your real certification test. Hence not only you get the required knowledge but also find the opportunity to practice real exam scenario.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q122-Q127):

NEW QUESTION # 122

DRAG DROP

Put the following steps in the correct order to update the driver/firmware in vSAN.

Answer:

Explanation:

A screenshot of a computer program AI-generated content may be incorrect.

Verify that the new driver and firmware versions are active and the host is functioning correctly.	Plan for a maintenance window to perform the update.
Download the latest driver and firmware from the hardware vendor's website.	Check the current driver and firmware versions using the vSphere Client.
Apply the firmware update to the host using the vendor's update tool.	Download the latest driver and firmware from the hardware vendor's website.
Plan for a maintenance window to perform the update.	Apply the firmware update to the host using the vendor's update tool.
Check the current driver and firmware versions using the vSphere Client.	Update the driver using the vSphere Lifecycle Manager (vLCM)
Reboot the host to complete the update process.	Reboot the host to complete the update process.
Update the driver using the vSphere Lifecycle Manager (vLCM)	Verify that the new driver and firmware versions are active and the host is functioning correctly.

NEW QUESTION # 123

An organization is planning to manage a diverse set of databases across multiple VMware Cloud Foundation (VCF) environments using Data Services Manager.

Which three capabilities of Data Services Manager would help the organization managing these databases efficiently? (Choose three.)

- A. Automated database provisioning and deployment
- B. Automated database migration between on-premises and cloud environments
- C. Policy-based backup and recovery for databases
- D. Integration with vSAN for optimized storage management
- E. Centralized monitoring and alerting for all managed databases

Answer: A,C,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Data Services Manager provides several key capabilities that help organizations efficiently manage databases across VMware Cloud Foundation environments. The official documentation describes the following functions:

Centralized monitoring and alerting for all managed databases (A): Data Services Manager offers a single pane of glass for

monitoring health, usage, and generating alerts for all databases under management.

Policy-based backup and recovery for databases (C): The platform allows administrators to define policies for backup and restore operations, ensuring data protection and compliance across all managed databases.

Automated database provisioning and deployment (E): Administrators can automate the deployment, scaling, and lifecycle management of databases, streamlining the operational process.

While Data Services Manager integrates with VMware storage and supports operational automation, it does not provide built-in, automated migration between on-premises and cloud environments, nor does it specifically require direct integration with vSAN for its optimized storage management features.

NEW QUESTION # 124

An organization has experienced performance issues and requires a detailed analysis of infrastructure performance, capacity, utilization, and compliance using VMware Aria components.

What three steps should be followed to generate and analyze these reports? (Choose three.)

- **A. Run predefined reports on capacity and utilization**
- B. Export the reports for further analysis and compliance verification
- **C. Create custom dashboards to monitor performance metrics**
- **D. Use Aria Operations for Logs to correlate log data with performance**
- E. Access Aria Operations and navigate to the Reports section

Answer: A,C,D

Explanation:

Creating custom dashboards in Aria Operations allows administrators to visualize and monitor performance metrics specific to the organization's needs, making it easier to analyze the infrastructure.

Using Aria Operations for Logs helps correlate log data with performance issues, enabling a deeper analysis and understanding of the root causes of performance problems.

Running predefined reports on capacity and utilization provides valuable insights into how resources are being consumed, helping identify areas that need optimization or adjustment.

NEW QUESTION # 125

A Cloud Administrator has been tasked with verifying all of the prerequisites are in place prior to deploying VMware Aria Suite Lifecycle. The following information has been provided for the Aria Suite Lifecycle implementation: hostname: lcm domain:

vcf.company.com IP address: 10.0.0.150 /24 - IP gateway: 10.0.0.1 - Which three items must the Cloud Administrator ensure are

available prior to deploying VMware Aria Suite Lifecycle? (Choose three.)

- **A. The IP address for the Standalone Tier 1 Load Balancer for VMware Aria components is prepared**
- B. A DNS PTR Record for 10.0.0.1 that points to lcm.vcf.company.com
- C. A CA-signed SSL certificate for Aria Suite Lifecycle added to SDDC Manager
- **D. A DNS A Record for lcm.vcf.company.com that points to 10.0.0.150**
- **E. Connectivity between Application Virtual Networks, Management Network, and network services (DNS and NTP)**

Answer: A,D,E

NEW QUESTION # 126

DRAG DROP

Match each vSphere HA host state issue with its troubleshooting step.

Issues		Troubleshooting Steps
Host in Isolation Response		Verify network connectivity and HA isolation response settings
Host in Failover State		Ensure host is powered on and network is properly configured
Host in Unreachable State		Wait for HA to complete its initialization or check logs for errors
Host in Initialization State		Check for sufficient resources on remaining hosts

Answer:

Explanation:

Issues		Troubleshooting Steps
Host in Isolation Response	Host in Isolation Response	Verify network connectivity and HA isolation response settings
Host in Failover State	Host in Unreachable State	Ensure host is powered on and network is properly configured
Host in Unreachable State	Host in Initialization State	Wait for HA to complete its initialization or check logs for errors
Host in Initialization State	Host in Failover State	Check for sufficient resources on remaining hosts

Explanation:

A screenshot of a computer error AI-generated content may be incorrect.

Issues		Troubleshooting Steps
