Quiz 2025 VMware 2V0-41.24: High-quality Latest Real VMware NSX 4.X Professional V2 Exam

As you know, opportunities are reserved for those who are prepared. Everyone wants to stand out in such a competitive environment, but they don't know how to act. Maybe our 2V0-41.24 learning materials can help you. Having a certificate may be something you have always dreamed of, because it can prove that you have a certain capacity. Our learning materials can provide you with meticulous help and help you get your certificate. Our 2V0-41.24 Learning Materials are credible and their quality can stand the test. Therefore, our practice materials can help you get a great financial return in the future and you will have a good quality of life.

VMware NSX 4.X Professional V2 Sample Questions (Q88-Q93):

NEW QUESTION # 88

Which CLI command would an administrator use to allow syslog on an ESXi transport node when using the esxcli utility?

- **A. esxcli network firewall ruleset set -r syslog -e true**
- B. esxcli network firewall ruleset set -r syslog -e false
- C. esxcli network firewall ruleset -e syslog
- D. esxcli network firewall ruleset set -a -e false

Answer: A

Explanation:

To allow syslog on an ESXi transport node, the administrator needs to use the esxcli utility to enable the syslog ruleset in the ESXi firewall. The correct syntax for this command is esxcli network firewall ruleset set -r syslog -e true, where -r specifies the ruleset name and -e specifies whether to enable or disable it.

The other options are incorrect because they either use an invalid syntax, such as omitting the ruleset name or using -a instead of -r, or they disable the syslog ruleset instead of enabling it, which is the opposite of what the question asks.

NEW QUESTION # 89

Which two statements are true about IDS Signatures? (Choose two.)

- **A. An IDS signature contains data used to identify known exploits and vulnerabilities.**
- B. Users can upload their own IDS signature definitions.
- **C. An IDS signature contains a set of instructions that determine which traffic is analyzed.**
- D. An IDS signature contains data used to identify the creator of known exploits and vulnerabilities.
- E. IDS signatures can be High Risk, Suspicious, Low Risk and Trustworthy.

Answer: A,C

Explanation:

An IDS signature contains data used to identify an attacker's attempt to exploit a known vulnerability in both the operating system and applications.

IDS/IPS Profiles are used to group signatures, which can then be applied to select applications and traffic.

NEW QUESTION # 90

An administrator needs to encrypt file transfers between two sites that do not have the same subnet. Which NSX-T feature accomplishes this task?

- **A. IPSEC VPN**
- B. L2 VPN
- C. Tier-0 Gateway
- D. SSL VPN +

Answer: A

NEW QUESTION # 91

When collecting support bundles through NSX Manager, which files should be excluded for potentially containing sensitive information?

- A. Controller Files
- B. Audit Files
- **C. Core Files**
- D. Management Files

Answer: C

Explanation:

According to the VMware NSX Documentation¹, core files and audit logs can contain sensitive information and should be excluded
