

VMware 2V0-41.24 Reliable Study Plan, 2V0-41.24 Certification Exam Dumps

2025 Latest Fast2test 2V0-41.24 PDF Dumps and 2V0-41.24 Exam Engine Free Share: https://drive.google.com/open?id=1IAom8qFM-5caKoGo-fOHe8_pPAf3JblR

Whole Fast2test's pertinence exercises about VMware certification 2V0-41.24 exam is very popular. Fast2test's training materials can not only let you obtain IT expertise knowledge and a lot of related experience, but also make you be well prepared for the exam. Although VMware Certification 2V0-41.24 Exam is difficult, through doing Fast2test's exercises you will be very confident for the exam. Be assured to choose Fast2test efficient exercises right now, and you will do a full preparation for VMware certification 2V0-41.24 exam.

There are three formats of the 2V0-41.24 practice training material for your preparation. You can choose as your needs. The first one is the pdf files: 2V0-41.24 pdf dumps can be printed into papers which is very suitable for making notes. The 2V0-41.24 PC test engine & 2V0-41.24 online test engine are all VCE format and can simulate the actual test environment. The 2V0-41.24 PC test engine is suitable for any windows system, while the 2V0-41.24 online test engine can be installed on any electronic device. All the 2V0-41.24 exam content are the same and valid for different formats.

2V0-41.24 Certification Exam Dumps, Exam 2V0-41.24 Cram

The Fast2test is one of the top-rated and renowned platforms that have been offering real and valid VMware NSX 4.X Professional V2 (2V0-41.24) practice test questions for many years. During this long time period countless VMware NSX 4.X Professional V2 (2V0-41.24) exam candidates have passed their dream VMware NSX 4.X Professional V2 (2V0-41.24) certification exam and they are now certified VMware professionals and pursuing a rewarding career in the market.

VMware NSX 4.X Professional V2 Sample Questions (Q114-Q119):

NEW QUESTION # 114

An NSX administrator is using ping to check connectivity between VM1 running on ESXi1 to VM2 running on ESXi2. The ping tests fail. The administrator knows the maximum transmission unit size on the physical switch is 1600.

Which command does the administrator use to check the VMware kernel ports for tunnel end point communication?

- A. `vmkping ++netstack=geneve -d -s 1572 <destination IP address>`
- B. `esxcli network diag ping -I vmk0 -H <destination IP address>`
- C. `vmkping ++netstack=vxlan -d -s 1572 <destination IP address>`
- D. `esxcli network diag ping -H <destination IP address>`

Answer: A

Explanation:

The `vmkping ++netstack=geneve -d -s 1572 <destination IP address>` command is used to check connectivity for VMware kernel ports specifically for Geneve tunnel endpoints (TEPs). The `-s 1572` option sets the packet size to test within the 1600 MTU limit,

accounting for the Geneve encapsulation overhead. The -d option enables the "Don't Fragment" bit, ensuring the packet isn't fragmented along the path, which is essential for verifying MTU consistency across the network.

NEW QUESTION # 115

In which VPN type are the Virtual Tunnel interfaces (VTI) used?

- A. Policy & Route based VPNs
- B. SSL-based VPN
- **C. Route-based VPN**
- D. Route & SSL based VPNs

Answer: C

Explanation:

Route-based VPN is a VPN type that uses Virtual Tunnel interfaces (VTI) to establish IPsec tunnels between an NSX Edge node and remote sites². A VTI is a logical interface that is assigned an IP address and is associated with a physical or virtual interface. The VTI acts as an end point of the IPsec tunnel and routes traffic between the NSX Edge node and the remote site². Route & SSL based VPNs, Policy & Route based VPNs, and SSL-based VPN are not VPN types that use VTI.

Reference: Virtual Private Network (VPN)

NEW QUESTION # 116

Which CLI command on NSX Manager and NSX Edge is used to change NTP settings?

- A. get timezone
- B. set timezone
- C. get time-server
- **D. set ntp-server**

Answer: D

Explanation:

The CLI command on NSX Manager and NSX Edge that is used to change NTP settings is set ntp- server. This command allows the user to configure one or more NTP servers for time synchronization^{1,2}.

The other options are incorrect because they are not valid CLI commands for changing NTP settings.

The get timezone and set timezone commands are used to display and configure the timezone of the system¹. The get time-server command is used to display the current time server configuration¹. There are no CLI commands for using RADIUS or BootP for NTP settings.

Reference: NSX-T Command-Line Interface Reference, vSphere ESXi 7.0 U3 and later versions NTP configuration steps

NEW QUESTION # 117

Which three data collection sources are used by NSX Network Detection and Response to create correlations/Intrusion campaigns? (Choose three.)

- A. East-West anti-malware events from the ESXi hosts
- **B. Suspicious Traffic Detection events from NSX Intelligence**
- **C. IDS/IPS events from the ESXi hosts and NSX Edge nodes**
- D. Distributed Firewall flow data from the ESXi hosts
- **E. Files and anti-malware (file events from the NSX Edge nodes and the Security Analyzer)**

Answer: B,C,E

Explanation:

The correct answers are

A: Files and anti-malware (file) events from the NSX Edge nodes and the Security Analyzer, D: IDS/IPS events from the ESXi hosts and NSX Edge nodes, and E: Suspicious Traffic Detection events from NSX Intelligence. According to the VMware NSX

Documentation³, these are the three data collection sources that are used by NSX Network Detection and Response to create correlations/intrusion campaigns.

The other options are incorrect or not supported by NSX Network Detection and Response. East-West anti-malware events from the ESXi hosts are not collected by NSX Network Detection and Response³.

Distributed Firewall flow data from the ESXi hosts are not used for correlation/intrusion campaigns by NSX Network Detection and Response³.

NEW QUESTION # 118

Which two statements are correct about East-West Malware Prevention? (Choose two.)

- A. NSX Edge nodes must have Internet access.
- B. An agent must be installed on every ESXi host.
- C. A SVM is deployed on every ESXi host.
- D. NSX Application Platform must have Internet access.
- E. An agent must be installed on every NSX Edge node.

Answer: C,D

Explanation:
