flexibility: Can be deployed in a Simple or Highly Available Cluster deployment. Recommended deployment is a HA Cluster... Simple deployment is for test/dev environments, it is not for production use cases."

By contrast, HA/clustered models increase resources to provide redundancy at scale. Since the requirement is the smallest resource footprint, the Simple model is the correct selection.

(Stretched/Continuous Availability options are not listed VCF Operations models in this context.)

6.An administrator is tasked to deploy a new vSAN Storage Cluster to an existing VCF instance. The VCF instance is deployed as a single workload domain.

What must the administrator do to achieve this without deploying additional management components?

A. Deploy an additional VCF instance and workload domain with a vSAN storage cluster.
B. Deploy additional hosts as vSAN storage-only nodes within the existing cluster.
C. Deploy a second cluster as a vSAN storage cluster in the existing workload domain.
D. Deploy an additional workload domain with a vSAN storage cluster within the existing VCF instance.

Answer: C

Explanation:

Comprehensive and Detailed

The VCF 9.0 Architecture and Deployment Guide explains that within a single Workload Domain, administrators can scale resources by adding additional clusters, including compute or vSAN storage clusters. Specifically, "A Workload Domain can contain multiple clusters. You can deploy a new cluster, such as a vSAN cluster, into an existing domain without introducing new management components." .
Options A and D both introduce new workload domains or VCF instances, which require their own management stack (vCenter, NSX Manager, etc.) and are unnecessary in this scenario. Option B is incorrect because "vSAN storage-only nodes" are supported in vSAN but are not the method for adding a new cluster within VCF automation. The correct approach is deploying a second cluster inside the same workload domain—this reuses the existing management components while meeting the requirement for a new vSAN storage cluster.

7.Which two types of group can be created to collect and manage objects in Istio Service Mesh? (Choose two.)

A. Security
B. Cluster
C. Service
D. API
E. Node

Answer: B, C

Explanation:

Comprehensive and Detailed

The Istio integration in VCF 9.0 defines two main logical groupings for organizing workloads within a service mesh: Cluster groups and Service groups. The documentation notes: "Cluster groups allow you to organize and manage objects across different Kubernetes clusters. Service groups let you aggregate and manage services that share common policies, routing rules, or observability requirements." .
These groups enable administrators to apply consistent service mesh policies across multiple deployments and clusters. They also simplify administration by centralizing traffic management, routing,

VMware NSX 4.x Advanced Design Sample Questions (Q91-Q96):

NEW QUESTION # 91
A Solutions Architect has been tasked with designing an NSX architecture that meets these customer requirements:
* Need for network segmentation and security
* Need for load balancing for high availability and performance
* Integration with existing and future VMware and non-VMware workloads
* Solution should allow for future scalability
The architect has decided to leverage the NSX Tier-0 and Tier-1 Gateways for the architecture design to manage North-South and East-West traffic.
How should the architect design the gateway deployment to ensure high availability, effective traffic management, and scalability?

- A. Deploy a single Tier-1 Gateway and a single Tier-0 Gateway, and connect all workloads to the Tier-1 Gateway.
- B. Deploy multiple Tier-1 Gateways connected to a single Tier-0 Gateway and distribute workloads evenly across the Tier-1 Gateways.
- C. Deploy multiple VRFs connected to a single Tier-0 Gateway and distribute workloads across the VRFs.
- D. Deploy multiple Tier-0 Gateways, each connected to a single Tier-1 Gateway, and distribute workloads evenly across the Tier-1 Gateways.

Answer: B

Explanation:
* Scalable Multi-Tier NSX Design (Correct Answer - A):
* Multiple Tier-1 Gateways distribute traffic efficiently across workloads.
* Single Tier-0 Gateway provides consistent external routing, simplifying BGP/OSPF configuration.
* Supports multi-tenancy and micro-segmentation while maintaining performance scalability.

NEW QUESTION # 92
Identifying customers' requirements is crucial for?

- A. Planning the company picnic
- B. Deciding the office decor
- C. Tailoring the solution to meet specific needs
- D. Setting up the company's social media profiles

Answer: C

NEW QUESTION # 93
What is a key advantage of using the NSX Distributed Firewall?

- A. Applies firewall rules at the vNIC level
- B. Reduces the need for physical firewalls
- C. Eliminates the need for antivirus software
- D. Bypasses the need for network segmentation

Answer: A

NEW QUESTION # 94
Risks in a VMware design might include?

- A. Fluctuations in the stock market
- B. Potential for data breaches
- C. Changes in fashion trends
- D. Changes in the management team

Answer: B

NEW QUESTION # 95
A Solutions Architect working with a multinational corporation has several branch offices located across different geographical regions. The organization is looking for a secure and reliable way to connect these branch offices to the corporate data center and ensure secure communication between them.
What NSX feature should be recommended by the architect?

- A. Federation
- B. IPSec VPN
- C. GRE Tunnels
- D. Bridging

Answer: B

Explanation:
* IPSec VPN for Secure Multi-Site Connectivity (Correct Answer - A):
* NSX-T IPSec VPNprovidessite-to-site encryptionforsecure connectivity between branch offices and the corporate data center.
* Supports multi-site communicationwhileensuring data confidentiality and integrity.
* Works well forhybrid cloud and remote branch office connections.
* Incorrect Options:
* (B - GRE Tunnels):
* GREdoes not provide encryptionand isnot supported in NSX-T.
* (C - Bridging):
* L2 bridgingis used forextending VLANs between environments, not for site-to-site security.
* (D - Federation):
* NSX Federation is for managing multiple NSX instances centrally, not forsecure branch connectivity.
