

# We provide 100% premium Microsoft AZ-120 exam questions

What's more, part of that RealVCE AZ-120 dumps now are free: [https://drive.google.com/open?id=1MNVY0e4sgrZTOF\\_GCauIghRGCHImnECQ](https://drive.google.com/open?id=1MNVY0e4sgrZTOF_GCauIghRGCHImnECQ)

As the leader in the market for over ten years, our Microsoft AZ-120 practice engine owns a lot of the advantages. Our AZ-120 study guide is featured less time input, high passing rate, three versions, reasonable price, excellent service and so on. All your worries can be wiped out because our Microsoft AZ-120 learning quiz is designed for you. We hope that that you can try our free trials before making decisions.

Microsoft AZ-120 Certification Exam is designed for individuals who want to demonstrate their proficiency in planning and administering Microsoft Azure for SAP workloads. Planning and Administering Microsoft Azure for SAP Workloads certification is ideal for IT professionals who work with SAP systems and want to learn how to integrate them with Azure to achieve better performance, scalability, and security.

## Exam AZ-120 Topics - AZ-120 Study Tool

A lot of professional experts concentrate to making our AZ-120 practice materials by compiling the content so they have gained reputation in the market for their proficiency and dedication. About some esoteric points, they illustrate with examples for you. Our AZ-120 practice materials are the accumulation of professional knowledge worthy practicing and remembering, so you will not regret choosing us. The best way to gain success is not cramming, but to master the discipline and regular exam points of question behind the tens of millions of questions. Our AZ-120 practice materials can remove all your doubts about the exam. If you believe in our products this time, you will enjoy the happiness of success all your life.

## Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q210-Q215):

### NEW QUESTION # 210

You have an on-premises SAP environment that uses AIX servers and IBM DB2 as the database platform. You plan to migrate SAP to Azure. In Azure, the SAP workloads will use Windows Server and Microsoft SQL Server as the database platform.

What should you use to export from DB2 and import the data to SQL Server?

- A. R3load
- B. SQL Server Management Studio (SSMS)

- C. R3trans
- D. Azure SQL Data Warehouse

**Answer: B**

Explanation:

To migrate DB2 databases to SQL Server, you must connect to the DB2 database that you want to migrate. When you connect, SSMA obtains metadata about all DB2 schemas, and then displays it in the DB2 Metadata Explorer pane.

References:

<https://docs.microsoft.com/en-us/sql/ssma/db2/connecting-to-db2-database-db2tosql?view=sql-server-ver15>

<https://docs.microsoft.com/en-us/biztalk/adapters-and-accelerators/adapter-sap/import-sap-data-using-sql-server-management-studio>

### NEW QUESTION # 211

You have an Azure Availability Set that is configured as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Virtual machines that share [answer choice] will be susceptible to a storage outage.

▼

- aligned SKUs
- the same fault domain
- the same update domain

Virtual machines in the Azure Availability Set can support [answer choice].

▼

- datacenter outages
- managed disks
- regional outages

**Answer:**

Explanation:

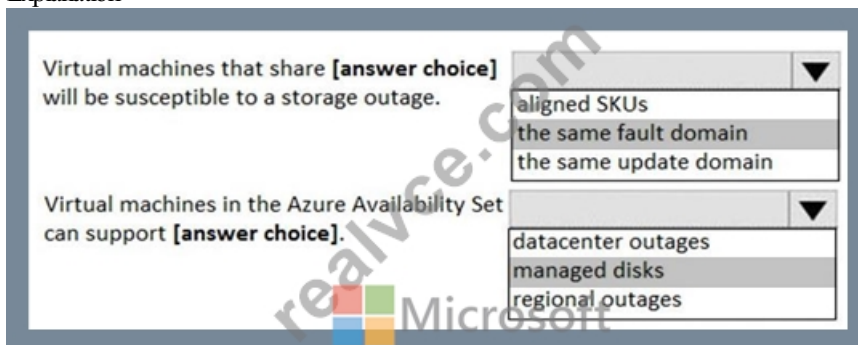

Virtual machines that share [answer choice] will be susceptible to a storage outage.

aligned SKUs  
the same fault domain  
the same update domain

Virtual machines in the Azure Availability Set can support [answer choice].

datacenter outages  
managed disks  
regional outages

Explanation

Box 1: the same fault domain

Fault domains define the group of virtual machines that share a common power source and network switch. If a storage fault domain fails due to hardware or software failure, only the VM instance with disks on the storage fault domain fails.

Box 2: managed disks

Managed disks provide better reliability for Availability Sets by ensuring that the disks of VMs in an Availability Set are sufficiently isolated from each other to avoid single points of failure. It does this by automatically placing the disks in different storage fault domains (storage clusters) and aligning them with the VM fault domain.

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/manage-availability>

### NEW QUESTION # 212

A company named Contoso, Ltd. has users across the globe. Contoso is evaluating whether to migrate SAP to Azure. The SAP environment runs on SUSE Linux Enterprise Server (SLES) servers and SAP HANA databases. The Suite on HANA database is 4 TB.

You need to recommend a migration solution to migrate SAP application servers and the SAP HANA databases. The solution must minimize downtime.

Which migration solutions should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

SAP application servers:

	▼
AzCopy	
Azure Site Recovery	
SAP HANA system replication	
System Copy for SAP Systems	

SAP HANA databases:

	▼
AzCopy	
Azure Site Recovery	
SAP HANA system replication	
System Copy for SAP Systems	

Answer:

Explanation:

SAP application servers:

	▼
AzCopy	
Azure Site Recovery	
SAP HANA system replication	
System Copy for SAP Systems	

SAP HANA databases:

	▼
AzCopy	
Azure Site Recovery	
SAP HANA system replication	
System Copy for SAP Systems	

Explanation:

Box 1: Azure Site Recovery

Microsoft Azure Site Recovery (ASR) now supports SUSE Linux Enterprise Server 11 SP3/SP4 and SUSE Linux Enterprise Server 12 SP1/SP2/SP3. This is great for customers that are planning to migrate systems to Microsoft Azure or customers who need to have a business continuity strategy for their Azure deployments.

Azure Site Recovery enables SUSE customers to migrate their non-Azure virtual machines or physical servers to Microsoft Azure virtual machines.

Box 2: System Copy for SAP Systems

In order to migrate an existing SAP HANA system into Azure, a SAP homogeneous system copy can be performed.

### NEW QUESTION # 213

You plan to deploy SAP HANA to an Azure virtual machine that has a constrained vCPU size.

You need to validate that the virtual machine complies with SAP-defined resource requirements by using the SAP HANA Hardware and Cloud Measurement Tools (HCMT).

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

- Run the hcertsetup command.
- Run the hcert command and specify the executionplan.json parameter.
- Upload the ZIP file to the SAP HANA Hardware and Cloud Measurement Analysis.
- Run the sapcar utility.
- Download the HCMT.

**Answer Area**

- 1
- 2
- 3
- 4
- 5

**Answer:**

**Explanation:**

**Actions**

- Run the hcertsetup command.
- Run the hcert command and specify the executionplan.json parameter.
- Upload the ZIP file to the SAP HANA Hardware and Cloud Measurement Analysis.
- Run the sapcar utility.
- Download the HCMT.

**Answer Area**

- 1 Download the HCMT.
- 2 Run the hcertsetup command.
- 3 Run the hcert command and specify the executionplan.json parameter.
- 4 Upload the ZIP file to the SAP HANA Hardware and Cloud Measurement Analysis.
- 5 Run the sapcar utility.

**Explanation:**

Table Description automatically generated with low confidence

**Actions**

- Run the hcertsetup command.
- Run the hcert command and specify the executionplan.json parameter.
- Upload the ZIP file to the SAP HANA Hardware and Cloud Measurement Analysis.
- Run the sapcar utility.
- Download the HCMT.

**Answer Area**

- 1 Download the HCMT.
- 2 Run the hcertsetup command.
- 3 Run the hcert command and specify the executionplan.json parameter.
- 4 Upload the ZIP file to the SAP HANA Hardware and Cloud Measurement Analysis.
- 5 Run the sapcar utility.

#### NEW QUESTION # 214

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Enabling Accelerated Networking on an SAP application server will decrease CPU usage.	<input type="radio"/>	<input type="radio"/>
Enabling Accelerated Networking on an SAP application server will increase jitter.	<input type="radio"/>	<input type="radio"/>
You can enable Accelerated Networking on any Azure virtual machine.	<input type="radio"/>	<input type="radio"/>

**Answer:**

**Explanation:**

Statements	Yes	No
Enabling Accelerated Networking on an SAP application server will decrease CPU usage.	<input checked="" type="radio"/>	<input type="radio"/>
Enabling Accelerated Networking on an SAP application server will increase jitter.	<input checked="" type="radio"/>	<input type="radio"/>
You can enable Accelerated Networking on any Azure virtual machine.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: Yes

By moving much of Azure's software-defined networking stack off the CPUs and into FPGA-based SmartNICs, compute cycles are reclaimed by end user applications, putting less load on the VM, decreasing jitter and inconsistency in latency.

Box 2: Yes

Box 3: No

Accelerated Networking (AN) is generally available (GA) and widely available for Windows and the latest distributions of Linux

## NEW QUESTION # 215

.....

Do you want to pass your exam with the least time? Our AZ-120 learning materials are high-quality, and you just need to spend 48 to 72 hours on learning, you can pass the exam successfully. What's more, free demo for AZ-120 exam dumps is available, and you can have a try before buying, so that you can have a deeper understanding of what you are going to buy. If you fail to pass the exam by using AZ-120 Exam Braindumps, we will give you full refund, and no other questions will be asked. We have online and offline chat service, and if you any questions for AZ-120 training materials, you can have a conversation with us.
