Test Juniper JN0-224 Questions | Valid Test JN0-224 Tips

To ensure your success, you require Juniper JN0-224 Exam Questions that provide comprehensive and relevant information for a fully prepared approach to the Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) exam. While numerous online guides offer JN0-224 Exam Questions, caution is necessary to avoid falling victim to online scams. Trust PracticeDump for the ultimate preparation experience with their Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) exam questions.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which HTTP status code indicates a response to a successful request?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:
Explanation

Reference: https://www.juniper.net/documentation/en_US/junos-space-sdk/13.1/apiref/com.juniper.junos_space.sdk.help/html/reference/Commonbehav.html

NEW QUESTION # 34

What is the correct Python script syntax to prompt for input?

- A. `hostIP = input"Device IP address: "`
- B. `input("Device IP address: ") = hostIP`
- C. `hostIP = input("Device IP address: ")`
- D. `hostIP = input{Device IP address: }`

Answer: C

Explanation:

In Python, the correct syntax to prompt the user for input and store that input in a variable is:

`input(prompt)`: The `input()` function is used to take input from the user. The string provided as an argument (inside the parentheses) is displayed as a prompt to the user. The input provided by the user is returned as a string and can be stored in a variable.

Example:

```
hostIP = input("Device IP address: ")
```

In this example, "Device IP address: " is the prompt displayed to the user, and the user's input will be stored in the variable `hostIP`.

Options B, C, and D are syntactically incorrect in Python.

Reference:

Python Official Documentation: Describes the use of the `input()` function for getting user input.

Python Tutorials: Various tutorials demonstrate how to properly use the `input()` function in scripts.

NEW QUESTION # 35

You want to perform a dry run on the `myPlays` playbook and use a custom inventory file called `myRouters.ini`.

Which Ansible command would you use in this scenario?

- A. `ansible-playbook myPlays --check -i myRouters.ini`
- B. `ansible-playbook myPlays -extra-vars "dry run=True" myRouters.ini`
- C. `ansible-playbook myPlays -limit myRouters`
- D. `ansible-playbook myPlays -extra-vars "inventory_file=myRouters .ini"`

Answer: D

NEW QUESTION # 36

Which two standard logical operators does XPath support? (Choose two.)

- A. MAMD
- B. NOT
- C. IOR
- D. AND

Answer: B,D

Explanation:

XPath is a query language used for selecting nodes from an XML document. It supports various logical operators that can be used to create complex queries. The two standard logical operators supported by XPath are:

NOT: This operator negates a condition, returning true if the condition is false, and vice versa.

AND: This operator is used to combine two conditions, and it returns true only if both conditions are true.

Option A (IOR) and Option D (MAMD) are not standard XPath operators.

Supporting Reference:

XPath Documentation: The W3C XPath specification lists the standard operators supported in XPath, including AND and NOT.

NEW QUESTION # 37

Which two statements are correct about a Python list data type? (Choose two.)

- A. The data contained in a list data type is not sequenced or indexed.
- **B. The data contained in a list data type is sequenced and indexed starting from 0.**
- **C. The data contained in a list data type can be modified.**
- D. The data contained in a list data type cannot be modified.

Answer: B,C

Explanation:

Python lists have the following characteristics:

Modifiable Data (A): Lists are mutable, meaning you can change, add, or remove elements after the list has been created.

Sequenced and Indexed (B): Lists maintain the order of their elements and are indexed starting from 0. This means you can access elements by their position in the list.

Option C is incorrect because lists are mutable, allowing modifications. Option D is incorrect because lists are indeed sequenced and indexed, unlike dictionaries.

Reference:

Python Official Documentation: Covers the properties of lists, including mutability and indexing.

Python Data Structures Guide: Explains list operations and how to manipulate them.

NEW QUESTION # 38

.....

How can our JN0-224 study questions are so famous and become the leader in the market? Because our JN0-224 learning braindumps comprise the most significant questions and answers that have every possibility to be the part of the real exam. As you study with our JN0-224 Practice Guide, you will find the feeling that you are doing the real exam. Especially if you choose the Software version of our JN0-224 training engine, which can simulate the real exam.

Test JN0-224 Questions: https://www.practicedump.com/JN0-224_actualtests.html

There is a demo of the Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) practice exam which is totally free, Juniper Free JN0-224 Download Pdf Therefore, you can apply for the position with high salary, which in turn testify your high social status, Juniper Free JN0-224 Download Pdf Perhaps you have trained several times to passing the test, but the results are always not so clear about your mind so you just have to try and try, When you buy JN0-224 real exam, don't worry about the leakage of personal information, Juniper have an obligation to protect your privacy.

Establishing a List of Fields, A user named Steve in the marketing Free JN0-224 Download Pdf department forgets his password on a regular basis, causing you much concern and administrative effort regarding security.
