Latest C_ACDET_2506 Dumps Pdf | C_ACDET_2506 Test Vce Free

If you choose to register SAP C_ACDET_2506 certification exam, you must try to get the C_ACDET_2506 certification. If you are apprehensive of defeat, you can select Exam4Free SAP C_ACDET_2506 dumps. No matter what your qualification and your ability are, you can grasp these knowledge easily. Exam4Free SAP C_ACDET_2506 Test Questions and answers is the latest. We provide you with free update for one year. After using it, you will make a difference.

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details

Topic 1	• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 2	• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
Topic 3	• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q46-Q51):

NEW QUESTION # 46

Which syntax is used for writing custom Validity Conditions?

- A. Python
- **B. Regular expression**
- C. Scheme
- D. XML

Answer: B

Explanation:

SAP Ariba uses an expression language based on Object-Graph Navigation Language (OGNL) to define custom validity conditions on fields. Within these expressions, regular expressions (regex) are supported to perform complex pattern validations, such as validating email formats or custom string structures. Other programming languages like Python, Scheme, or XML are not supported for this purpose. The use of regular expressions within SAP Ariba's validity conditions provides powerful, flexible validation capabilities, allowing administrators to enforce data quality rules precisely at the field level, consistent with official SAP Ariba documentation on validation expressions.

NEW QUESTION # 47

Which of the following data elements must be manually loaded into the Production environment after full configuration migration is completed using the Intelligent Configuration Manager (ICM)? (Select 2 correct answers)

- **A. Relation and Relation Entries**
- B. Units of Measure
- C. User to Group Mapping
- **D. Enumerations**

Answer: A,D

Explanation:

After migrating configurations using ICM, Enumerations and Relation entries require manual loading into Production because they are not included in automatic migration bundles. Enumerations provide picklist values, while Relations define dependencies between fields. Units of Measure are typically part of standard configuration or migrated automatically. User to Group Mapping is managed

separately through provisioning or identity management tools, not via ICM. Manual loading of these data elements ensures data integrity and avoids missing references.

NEW QUESTION # 48

If you add a custom field to the ContractWorkspace class, which other class(es) will that field be added to?

- A. AbstractContractWorkspace
- B. SalesContractRequest and InternalContractRequest
- C. ContractRequest
- D. Internal ContractWorkspace and SalesContractWorkspace

Answer: D

NEW QUESTION # 49

Which of the following is NOT mentioned as a configuration type migrated by the Intelligent Configuration Manager?

- A. Template - project templates such as Contract templates
- B. SupplierContact - contacts for the suppliers
- C. AMLExtension - AML customizations such as custom fields
- D. DynamicForm - custom form templates (dForms)

Answer: B

Explanation:

The Intelligent Configuration Manager (ICM) migrates configuration types such as DynamicForms (dForms), AML Extensions (custom fields and enumerations), and Templates (contract or project templates). However, SupplierContact data, which is master or transactional data, is not migrated through ICM because ICM focuses on configuration migration, not operational or transactional data. Supplier contact information is managed separately and must be migrated using appropriate master data processes.

NEW QUESTION # 50

Which of the following applies to Suite Integration?

- A. Suite Integration represents the out-of-the-box integration between SAP Ariba Strategic Sourcing suite and S/4HANA Public Cloud.
- B. Suite Integration refers to the process of manually connecting SAP Ariba applications with third-party software solutions.
- C. Suite Integration is a key benefit of SAP Ariba Strategic Sourcing suite as they are natively integrated.
- D. Suite Integration is the activity to integrate SAP Ariba Buying and Invoicing with an SAP Ariba Strategic Sourcing suite solution.

Answer: C

Explanation:

Suite Integration in SAP Ariba refers to the native, out-of-the-box integration among SAP Ariba Strategic Sourcing Suite components such as sourcing, contracts, and supplier lifecycle. This integration ensures seamless workflows, shared master data (suppliers, users, commodity codes), and a unified user experience without manual intervention. It is a key benefit differentiating SAP Ariba from fragmented solutions. Manual third-party integrations or ERP integrations like S/4HANA are separate and not referred to as Suite Integration.
