Web-Development-Applications Exam simulation is selected by many experts and constantly supplements and adjust our questions and answers. When you use our Web-Development-Applications study materials, you can find the information you need at any time.

WGU Web Development Applications Sample Questions (Q67-Q72):

NEW QUESTION # 67

Given the following HTML code:

```
<p>
<a href="http://example.com/link1">Link 1.</a>
<a href="http://example.com/link1">Link 1.</a>
</p>
<div>
  Hello
</div>
</p>
<a href="http://example.com/link2">Link 2.</a>
<a href="http://example.com/link3">Link 3.</a>
</p>
```

And given the following CSS selector:

Which elements will the CSS be applied to?

- A. All anchors (a element) and elements preceded by an unordered list (ul element)
- **B. All anchors (a element) and elements inside unordered lists (ul element)**
- C. Any anchors (a element) followed by unordered lists (1:1 element)
- D. Any anchors (a element) preceded by unordered lists (ul element)

Answer: B

Explanation:

Given the CSS selector a, ul, it targets all anchor (<a>) elements and all unordered list () elements independently. This means the CSS rule will be applied to each <a> and element in the HTML document.

* CSS Selector Analysis:

* a: This part of the selector targets all <a> elements in the document.

*, : The comma is a selector separator, meaning that each part of the selector list is applied independently.

* ul: This part of the selector targets all elements in the document.

* Example:

* Given HTML:

```
<p>
<a href="http://example.com/link0">Link 0</a>
<a href="http://example.com/link1">Link 1</a>
</p>
<ul>
<li>Hello</li>
</ul>
<p>
<a href="http://example.com/link2">Link 2</a>
<a href="https://example.com/link3">Link 3</a>
</p>
<b>Sample</b>
```

* Given CSS:

```
a, ul {
color: red;
}
```

* Affected Elements: All <a> and elements will have the color set to red.

* References:

* MDN Web Docs - Comma combinator

* W3C CSS Selectors Level 3

NEW QUESTION # 68

Given the following code:

```
````javascript
var a;
````
```

What is the value of `a`?

- A. Null
- B. True
- C. False
- **D. Undefined**

Answer: D

Explanation:

> "When a variable is declared but not initialized, its value is `undefined` by default in JavaScript."

>

> Example:

```
````javascript
var a;
console.log(a); // undefined
```

---

- \* `null` must be explicitly assigned.
- \* `true` and `false` are Boolean values not assigned in this declaration.

References:

- \* MDN Web Docs: undefined
- \* JavaScript Language Specification: Variable declarations

---

### NEW QUESTION # 69

Which attribute displays help text in an input field without specifying an actual value for the input?

- **A. Placeholder**
- B. name
- C. Default
- D. For

**Answer: A**

Explanation:

The `placeholder` attribute in an `<input>` element displays help text in the input field without specifying an actual value for the input. This text disappears when the user starts typing.

\* Placeholder Attribute: This attribute provides a hint to the user about what type of information is expected in the field.

\* Usage Example:

```
<input type="text" placeholder="Enter your name">
```

The input field will show "Enter your name" as help text.

:

MDN Web Docs on `placeholder`

W3C HTML Specification on Input Placeholder

### NEW QUESTION # 70

What should be used to request and update data in the background?

- **A. AJAX**
- B. Canvas
- C. DOM
- D. API

**Answer: A**

Explanation:

> "AJAX (Asynchronous JavaScript and XML) is a technique used in web development to send and retrieve data from a server asynchronously, without interfering with the display and behavior of the existing page."

> This enables dynamic updates of web content without a full page reload.

References:

\* MDN Web Docs: AJAX Introduction

\* W3C: XMLHttpRequest API

---

### NEW QUESTION # 71

Given the following code:

```
var a = "0";
var b = "1";
var c = "0";
console.log(c);
```

What does the console display as output?

- A. 0
- B. 1

- C. 2

**Answer: C**

Explanation:

Given the code segment:

```
var a = "8";
var b = "6";
var c = a + b;
console.log(c);
```

This code concatenates two strings.

\* Explanation:

\* var a = "8";: Variable a is assigned the string "8".

\* var b = "6";: Variable b is assigned the string "6".

\* var c = a + b;: The + operator concatenates the two strings, resulting in "86".

\* console.log(c);: Outputs the value of c to the console.

\* Output:

\* The console displays "86" because it concatenates the two string values.

\* References:

\* MDN Web Docs - String

\* W3Schools - JavaScript String
