Web-Development-Applications Reliable Study Materials 100% Pass | High-quality Web-Development-Applications Valid Test Book: WGU Web Development Applications

Are you bothered by looking for good exam materials of WGU Web-Development-Applications test? Don't worry. SureTorrent can provide you with everything you need. Should your requirement, SureTorrent find an efficient method to help all candidates to pass Web-Development-Applications exam. Most candidates are preparing for IT certification exam while they working, which is a painstaking, laborious process. In order to avoid wasting too much time in preparing for the exam, SureTorrent provides you with WGU Web-Development-Applications Dumps that can help you pass the test in the short period of time. The dumps contain all problems in the actual test. So, as long as you make use of our dumps, Web-Development-Applications certificate exam will not a problem.

WGU Web Development Applications Sample Questions (Q80-Q85):

NEW QUESTION # 80

A web page has a section that contains an <article> element. The element is always 10 pixels to the right of its position. Which type of layout positioning should the <article> element use?

- A. Fixed
- **B. Relative**
- C. Absolute
- D. Static

Answer: B

Explanation:

Relative positioning in CSS positions an element relative to its normal position. Using `position: relative;` allows you to adjust the element's position with the `top`, `right`, `bottom`, or `left` properties.

* CSS Relative Positioning:

* Syntax:

```
article {
position: relative;
left: 10px;
}
```

* Description: Moves the element 10 pixels to the right from its normal position.

* Example:

* Given HTML:

```
<article>Content</article>
```

* Given CSS:

```
article {
position: relative;
left: 10px;
}
```

* Explanation: The `<article>` element will be positioned 10 pixels to the right of where it would normally appear.

W3C CSS Positioned Layout Module Level 3

NEW QUESTION # 81

What is the default behavior of overlay elements?

- A. Last element listed appears on bottom
- **B. Last element listed appears on top**
- C. First element listed is transparent
- D. First element listed is invisible

Answer: B

Explanation:

In CSS, when elements overlap, the default behavior is that the last element listed in the HTML document appears on top.

* Stacking Context:

* Default Behavior: Elements are stacked in the order they appear in the HTML. The last element in the document tree is rendered on top.

* `z-index`: You can control stacking order using the `z-index` property, but without it, the default order applies.

* Example:

* Given HTML:

```
<div style="position: absolute; width: 100px; height: 100px; background-color: red;"></div>
<div style="position: absolute; width: 100px; height: 100px; background-color: blue;"></div>
```

* The blue div will be on top of the red div because it appears later in the HTML document.

W3C CSS Positioned Layout Module Level 3

By understanding these fundamental CSS concepts, developers can create more effective and visually appealing web layouts.

NEW QUESTION # 82

Which HTML elements support the `<script>` tag to invoke JavaScript code?

Choose 2 answers:

- A. head
- B. body
- C. title
- D. meta
- E. form

Answer: A,B

Explanation:

> "The ``<script>`` element is permitted within the ``<head>`` and ``<body>`` sections of an HTML document.

These are the two valid locations for including or referencing JavaScript code."

>

> "It is not valid to place ``<script>`` inside ``<form>``, ``<meta>``, or ``<title>`` elements, as those are not meant for scripting."

References:

* HTML5 Specification: The ``<script>`` element

* W3C: HTML content categories

NEW QUESTION # 83

Given the following code:

What does the console display as output?

- A. 0
- B. 1
- C. 2

Answer: C

Explanation:

Given the code segment:

```
var a = "8";
```

```
var b = "6";
```

```
var c = a + b;
```

```
console.log(c);
```

This code concatenates two strings.

* Explanation:

* var a = "8";: Variable a is assigned the string "8".

* var b = "6";: Variable b is assigned the string "6".

* var c = a + b;: The + operator concatenates the two strings, resulting in "86".

* console.log(c);: Outputs the value of c to the console.

* Output:

* The console displays "86" because it concatenates the two string values.

* References:

* MDN Web Docs - String

* W3Schools - JavaScript String

NEW QUESTION # 84

Which attribute displays help text in an input field without specifying an actual value for the input?

- A. Default
- B. Placeholder
- C. For
- D. name

Answer: B

Explanation:

The placeholder attribute in an <input> element displays help text in the input field without specifying an actual value for the input.

This text disappears when the user starts typing.

* Placeholder Attribute: This attribute provides a hint to the user about what type of information is expected in the field.

* Usage Example:

```
<input type="text" placeholder="Enter your name">
```

The input field will show "Enter your name" as help text.

References:

* MDN Web Docs on placeholder

* W3C HTML Specification on Input Placeholder

NEW QUESTION # 85
