### NEW QUESTION # 23

Your organization is currently using FortiSASE for its cybersecurity. They have recently hired a contractor who will work from the HQ office and who needs temporary internet access in order to set up a web-based point of sale (POS) system.

What is the recommended way to provide internet access to the contractor?

- A. Configure a VPN policy on FortiSASE to provide access to the internet.
- **B. Use zero trust network access (ZTNA) and tag the client as an unmanaged endpoint.**
- C. Use a proxy auto-configuration (PAC) file and provide secure web gateway (SWG) service as an explicit web proxy.
- D. Use FortiClient on the endpoint to manage internet access.

**Answer: B**

Explanation:

The recommended way to provide temporary internet access to the contractor is to use Zero Trust Network Access (ZTNA) and tag the client as an unmanaged endpoint. ZTNA ensures that only authorized users and devices can access specific resources, while treating all endpoints as untrusted by default. By tagging the contractor's device as an unmanaged endpoint, you can apply strict access controls and ensure that the contractor has limited access to only the necessary resources (e.g., the web-based POS system) without exposing the internal network to unnecessary risks.
