NEW QUESTION # 214

You have a Microsoft 365 tenant that contains two users named User1 and User2. You create the alert policy shown in the following exhibit.

User2 runs a script that modifies a file in a Microsoft SharePoint Online library once every four minutes and runs for a period of two hours.

How many alerts will User1 receive?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

NEW QUESTION # 215

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the objects shown in the following table.

Name	Configuration
Group1	Global security group
User1	Enabled user account
User2	Disabled user account

You configure Azure AD Connect to sync contoso.com to Azure AD. Which objects will sync to Azure AD?

- **A. Group1, User1, and User2**
- B. Group1 and User1 only
- C. User1 and User2 only
- D. Group1 only

Answer: A

Explanation:

Disabled accounts

Disabled accounts are synchronized as well to Azure AD. Disabled accounts are common to represent resources in Exchange, for example conference rooms. The exception is users with a linked mailbox; as previously mentioned, these will never provision an account to Azure AD.

The assumption is that if a disabled user account is found, then we won't find another active account later and the object is provisioned to Azure AD with the userPrincipalName and sourceAnchor found. In case another active account will join to the same metaverse object, then its userPrincipalName and sourceAnchor will be used.

- B. Group1 and Group2 only
- C. Site1 only
- D. Group2 only
- E. Group1 only

Answer: A

Explanation:

Assign sensitivity labels to Microsoft 365 groups in Azure Active Directory. Azure Active Directory (Azure AD), part of Microsoft Entra, supports applying sensitivity labels published by the Microsoft Purview compliance portal to Microsoft 365 groups. In addition to using sensitivity labels to protect documents and emails, you can also use sensitivity labels to protect content in the following containers: Microsoft Teams sites, Microsoft 365 groups (formerly Office 365 groups), and SharePoint sites.

When you configure a label policy, you can:

Choose which users and groups see the labels. Labels can be published to any specific user or email-enabled security group, distribution group, or Microsoft 365 group (which can have dynamic membership) in Azure AD.
