We have applied the latest technologies to the design of our SAP C-CPI-2506 exam prep not only on the content but also on the displays. As a consequence you are able to keep pace with the changeable world and remain your advantages with our SAP C-CPI-2506 training braindumps. Besides, you can consolidate important knowledge for you personally and design customized study schedule or to-do list on a daily basis.

SAP C-CPI-2506 Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none">Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment. |
| Topic 2 | <ul style="list-style-type: none">Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs. |
| Topic 3 | <ul style="list-style-type: none">SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios. |

| | |
|---------|---|
| Topic 4 | <ul style="list-style-type: none"> • SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems. |

C-CPI-2506 Dumps PDF Format Practice Test

In the same way, IE, Firefox, Opera and Safari, and all the major browsers support the web-based SAP C-CPI-2506 practice test. So it requires no special plugins. The web-based SAP Certified Associate - Integration Developer (C-CPI-2506) practice exam software is genuine, authentic, and real so feel free to start your practice instantly with SAP Certified Associate - Integration Developer (C-CPI-2506) practice test.

SAP Certified Associate - Integration Developer Sample Questions (Q16-Q21):

NEW QUESTION # 16

Using the Test Connectivity function, you want to test a connection to a backend system. The connection is provided by a Cloud Connector. Which parameter is required for the connection test?

- A. Subaccount ID
- B. Host
- C. Connector ID
- D. Location ID

Answer: D

Explanation:

To test a connection to a backend system that is provided by a Cloud Connector, you must specify the location ID as a parameter for the connection test. The location ID is a unique identifier that represents a Cloud Connector instance in a specific network location. It is used to route requests from SAP Integration Suite to the correct Cloud Connector instance and then to the backend system. You can find the location ID in the Cloud Connector administration UI under Configuration Location ID. Reference: Cloud Connector Connectivity Tests | SAP Help Portal, Cloud Connector Configuration | SAP Help Portal

NEW QUESTION # 17

In a Data Store write operation, you want to set an Entry ID by reading a header value from an incoming message. Which notation do you use to implement this?

- A. `${header.receiver}`
- B. `$$ {headerreceiver}`
- C. `S {reaciverheader}`
- D. `S {reaciverheader}`

Answer: A

Explanation:

In SAP Cloud Integration, dynamic configuration values (headers, properties, body elements) are accessed using Expression Language (EL) notation:

`${header.<headerName>}` # Accesses a message header value.

`${property.<propertyName>}` # Accesses a message property.

`${body}` # Accesses the payload.

Therefore, when you want to set an Entry ID in a Data Store Write operation using a header value, the correct syntax is `${header.receiver}`.

NEW QUESTION # 18

You want to use an HTTPS endpoint from an integration flow. In which of the following must you use the HTTP client?

- A. API Management capability within SAP Integration Suite
- **B. Open Connectors capability within SAP Integration Suite**
- C. SAP Business Application Studio
- D. SAP Integration Suite, advanced event mesh

Answer: B

Explanation:

To use an HTTPS endpoint from an integration flow, you can use the Open Connectors capability within SAP Integration Suite. Open Connectors is a feature that allows you to connect to over 160 third-party applications using standardized and normalized APIs. You can use the HTTP client connector to make HTTP or HTTPS requests to any endpoint that supports these protocols. You can configure the HTTP client connector with various parameters, such as URL, method, headers, query parameters, body, and authentication. Reference: Open Connectors | SAP Help Portal, HTTP Client Connector | SAP Help Portal

NEW QUESTION # 19

You call the following URL in your browser: [https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet\('HT-1000'\)/ToSalesOrderLineItems](https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet('HT-1000')/ToSalesOrderLineItems). What file type is displayed?

- A. HTML
- **B. XML**
- C. Java
- D. PHP

Answer: B

Explanation:

The URL shown is an OData service endpoint exposed from the SAP ES5 Gateway demo system:
[https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet\('HT-1000'\)/ToSalesOrderLineItems](https://sapes5.sapdevcenter.com/sap/opu/odata/iwbep/GWSAMPLE_BASIC/ProductSet('HT-1000')/ToSalesOrderLineItems)

OData services in SAP Gateway return XML responses by default when called in a browser, unless otherwise specified by request headers (like JSON format).

The structure follows AtomPub/Atom XML representation, showing entity details and navigation properties.

Therefore, the file type displayed in the browser is XML, not HTML, Java, or PHP.

NEW QUESTION # 20

Where must you configure an HTTPS inbound adapter with OAuth 2.0 authentication?

- A. In the process runtime
- **B. In the integration flow**
- C. In the SAP Integration Suite
- D. In the adapter

Answer: B

Explanation:

An HTTPS inbound adapter is an adapter that allows an integration flow to receive messages from external systems using the HTTPS protocol. OAuth 2.0 authentication is a method of authentication that allows clients to access protected resources on behalf of a resource owner by obtaining an access token from an authorization server. To configure an HTTPS inbound adapter with OAuth 2.0 authentication, you must do it in the integration flow where you define the adapter settings. You can choose OAuth 2.0 as the authentication type and specify the required parameters, such as client ID, client secret, token URL, scope, and so on. You can also configure additional security options, such as SSL certificate, CSRF protection, and CORS policy. Reference: Using Adapter Inbound Security - SAP Learning, Set Up Inbound OAuth Client Credentials Grant Authentication for Senders Calling Integration Flows with SAP-Generated Certificate | SAP Tutorials

NEW QUESTION # 21

.....

Laziness will ruin your life one day. It is time to have a change now. Although we all love cozy life, we must work hard to create our own value. Then our C-CPI-2506 training materials will help you overcome your laziness. Study is the best way to enrich your life. On one hand, you may learn the newest technologies in the field with our C-CPI-2506 Study Guide to help you better adapt to your work, and on the other hand, you will pass the C-CPI-2506 exam and achieve the certification which is the symbol of competence.
