Here, the ITExamSimulator empathizes with them for the extreme frustration they undergo due to not finding updated and actual Google Professional-Cloud-Architect exam dumps. It helps them by providing the exceptional Google Professional-Cloud-Architect Questions to get the prestigious Google Professional-Cloud-Architect certificate.

Recommended Experience

Officially, there are no prerequisites to be fulfilled before taking-up the Google Professional Cloud Architect exam. Anyone who wants to polish their knowledge of Google Cloud and aim at an architect role can apply for it.

However, it is recommended to have a minimum of 3+ years of industry experience before anyone enrolls in the test. These should also include 1+ years of experience in designing solutions as well as managing them using GCP. Such a base will make the exam journey a bit more simplified.

Google Professional-Cloud-Architect PDF Questions: Accessible Anywhere

In order to meet your different needs for Professional-Cloud-Architect exam dumps, three versions are available, and you can choose the most suitable one according to your own needs. All three version have free demo for you to have a try. Professional-Cloud-Architect PDF version is printable, and you can print them, and you can study anywhere and anyplace. Professional-Cloud-Architect Soft text engine has two modes to practice, and you can strengthen your memory to the answers through this way, and it can also install in more than 200 computers. Professional-Cloud-Architect Online Test engine is convenient and easy to learn, and you can have a general review of what you have learned through the performance review.

To earn the Google Professional-Cloud-Architect certification, candidates must pass a rigorous exam that consists of multiple-choice and multiple-response questions. Professional-Cloud-Architect exam is administered by Google Cloud and can be taken online or at a testing center. Professional-Cloud-Architect Exam is timed and lasts for 2 hours and 30 minutes.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q239-Q244):

NEW QUESTION # 239

You need to evaluate your team readiness for a new GCP project. You must perform the evaluation and create a skills gap plan incorporates the business goal of cost optimization. Your team has deployed two GCP projects successfully to date. What should you do?

- A. Allocate budget to hire skilled external consultants. Set a deadline for the new GCP project.

- B. Allocate budget for team training. Set a deadline for the new GCP project.
- C. Allocate budget to hire skilled external consultants. Create a roadmap for your team to achieve Google Cloud certification based on job role.
- **D. Allocate budget for team training. Create a roadmap for your team to achieve Google Cloud certification based on job role.**

Answer: D

NEW QUESTION # 240

You are developing your microservices application on Google Kubernetes Engine. During testing, you want to validate the behavior of your application in case a specific microservice should suddenly crash. What should you do?

- A. Add a taint to one of the nodes of the Kubernetes cluster. For the specific microservice, configure a pod anti-affinity label that has the name of the tainted node as a value.
- **B. Destroy one of the nodes of the Kubernetes cluster to observe the behavior.**
- C. Use Istio's fault injection on the particular microservice whose faulty behavior you want to simulate.
- D. Configure Istio's traffic management features to steer the traffic away from a crashing microservice.

Answer: B

NEW QUESTION # 241

You want to automate the creation of a managed instance group and a startup script to install the OS package dependencies. You want to minimize the startup time for VMs in the instance group. What should you do?

- **A. Create a custom VM image with all OS package dependencies. Use Deployment Manager to create the managed instance group with the VM image.**
- B. Use Deployment Manager to create the managed instance group and Ansible to install the OS package dependencies.
- C. Use Terraform to create the managed instance group and a startup script to install the OS package dependencies.
- D. Use Puppet to create the managed instance group and install the OS package dependencies.

Answer: A

NEW QUESTION # 242

The JencoMart security team requires that all Google Cloud Platform infrastructure is deployed using a least privilege model with separation of duties for administration between production and development resources. What Google domain and project structure should you recommend?

- A. Create two G Suite accounts to manage users: one for development/test/staging and one for production. Each account should contain one project for every application
- B. Create a single G Suite account to manage users with each stage of each application in its own project
- C. Create two G Suite accounts to manage users: one with a single project for all development applications and one with a single project for all production applications
- **D. Create a single G Suite account to manage users with one project for the development/test/staging environment and one project for the production environment**

Answer: D

Explanation:

Note: The principle of least privilege and separation of duties are concepts that, although semantically different, are intrinsically related from the standpoint of security. The intent behind both is to prevent people from having higher privilege levels than they actually need

* Principle of Least Privilege: Users should only have the least amount of privileges required to perform their job and no more. This reduces authorization exploitation by limiting access to resources such as targets, jobs, or monitoring templates for which they are not authorized.

* Separation of Duties: Beyond limiting user privilege level, you also limit user duties, or the specific jobs they can perform. No user should be given responsibility for more than one related function. This limits the ability of a user to perform a malicious action and then cover up that action.

NEW QUESTION # 243

For this question, refer to the Dress4Win case study.

You want to ensure Dress4Win's sales and tax records remain available for infrequent viewing by auditors for at least 10 years. Cost optimization is your top priority. Which cloud services should you choose?

- A. Google Cloud Storage Nearline to store the data, and gsutil to access the data.
- B. BigQuery to store the data, and a web server cluster in a managed instance group to access the data. Google Cloud SQL mirrored across two distinct regions to store the data, and a Redis cluster in a managed instance group to access the data.
- C. Google Cloud Storage Coldline to store the data, and gsutil to access the data.
- D. Google Bigtable with US or EU as location to store the data, and gcloud to access the data.

Answer: C
